Dear Ms. Taylor:

This letter with attachments serves as the third quarterly Interim Compliance Monitoring Report. The work was conducted in compliance with the December 18, 2007 Order of Approval and the October 15, 2007 *Remedial Action Work Plan (RAWP)* that was prepared to address the applicable requirements of Section 9.00 of the RIDEM's Rules and Regulations for the Investigation and Remediation of Hazardous Materials Releases, (DEM-DSR01-93 Remediation Regulations) for the Charbert facility located at 299 Church Street in Richmond (Alton), Rhode Island. It was prepared by GZA GeoEnvironmental, Inc., on behalf of our client Charbert, a Division of NFA.

DATA SUMMARY

This report includes the following information and is subject to the Limitations presented in Attachment A:

- The fourth round of groundwater sampling was conducted October 1 and 3, 2008 and consisted of 12 monitoring wells within areas of active treatment and along the downgradient compliance boundaries, see attached Figure 1 for monitoring well locations. Groundwater was analyzed for volatile organic compounds (VOCs) via EPA Method 8260B. The detected analytes have been summarized and compared to RIDEM's Method 1 GA Groundwater Objectives and Groundwater Quality Preventative Action Limits (PALs) in the attached Tables 1 through 14. The laboratory certificates of analysis are provided in Attachment B.

- Groundwater sampling was performed in general accordance with EPA's July 30, 1996 *Low Stress (low flow) Purging and Sampling Procedure* (Low Flow SOP). Low flow sampling equipment (exclusive of tubing which is dedicated) was decontaminated prior to use on-site and between each location following EPA's required protocols. Water quality monitoring for stabilization was conducted utilizing a Horiba multi-meter in a flow through cell. Field equipment used to perform the

testing was calibrated according to the manufacturer's instructions before each sampling day, and confirmatory readings were taken at the end of each sampling day.

- The air sparge and soil vapor extraction monthly monitoring reports and associated data tables for July, August and September of 2008 are included as Attachment C. Soil vapor extraction and sparge wells for the interior and exterior remedial systems are shown on Figures 2 and 3, respectively. The monthly reports include the following information:

  Soil Vapor Extraction System

  During each visit, the following data was measured and recorded at each of the vent wells:

  1. Air flow rates;
  2. Vacuum response in inches of water column (IW);
  3. TVOC measurements using a PID equipped with a 10.6 eV lamp; and
  4. O_2, CO_2 and Lower Explosive Limit (LEL) measurements were collected utilizing a Land-Tech infrared gas meter.

  Air Sparge System

  During each visit, the following data was measured and recorded at each of the sparge points:

  1. Air flow rates; and
  2. Air pressures.

- The third quarter (July-September) 2008 underground injection control (UIC) report has been attached for your information. The report contains a summary of industrial wastewater pumping activities and the sampling results of the six UIC monitoring wells. The complete report has been included as Attachment D.

- The third round of groundwater sampling from the perimeter wells was conducted October 3, 2008 and consisted of 5 perimeter wells located between the Charbert facility and nearby private wells. The report contains the results of the monitoring well sampling for this the third quarter. The complete report has been included as Attachment E.

EVALUATION

Third Quarter Monitoring Results

The October 1 and 3, 2008 groundwater results have been compared to the applicable groundwater standards for Rhode Island and there are contaminants that exceed the RIDEM Preventative Action Limits (PALs) and RIDEM GA Groundwater Standards for VOCs in 8 of the 12 monitoring wells. Four contaminants that exceeded the GA Groundwater Standard; vinyl chloride, cis-1,2-dichloroethene, trichloroethene (TCE) and tetrachloroethene (PCE). Three of the four remaining monitoring wells had no detectable levels of VOCs. One well had detectable concentrations, but not above the GA objectives or PALs.

The RIDEM GA Groundwater Objective for vinyl chloride is 2 µg/L, the samples from GZ-21, GP-28, GZ-3, RIZ-7 and GP-26 had levels of 3.4, 10, 100 and 16 µg/L, respectively. The GA Objective for cis-1,2-dichloroethene is 70 µg/L and the samples from GZ-20, GZ-3 and GP-26 had a level of 230, 80 and 2300 µg/L. Trichloroethene has a GA objective of 5 µg/L and monitoring well locations GZ-20, GP-26, GZ-7 and GZ-3 were all in excess of the regulatory limit with concentrations ranging from 180 to 2300 µg/L. Tetrachloroethene has a GA groundwater objective of 5 µg/L and monitoring well locations GZ-21, GZ-22, GZ-19, GZ-20, GZ-7, GP-26 and GZ-3 were in excess of the regulatory limit with concentrations ranging from 6.1 to 16,000 µg/L.

The detected levels of each of these compounds are within historical ranges of analytical data collected from the Site. A comparison of baseline results with the third quarter results shows that there have been changes in the distribution of contaminant concentrations within the identified zone of contamination. There are also changes in the ratio of parent to daughter products (i.e., PCE concentrations relative to TCE, 1,2-DCE and VC). The observed changes are not unexpected given the level of disturbance to the aquifer introduced by the sparging system. The decrease in chlorinated daughter products is also consistent with a decrease in the level of reductive dechlorination caused by the oxygen introduced by the sparging system.

The quarterly monitoring program will be continued for 5 more quarters through (December 2009). At that time, an evaluation will be made of the future sampling frequency potentially moving to semi-annual corresponding to periods of seasonal high and low groundwater (e.g., March and September). Seasonal groundwater levels will be evaluated prior to choosing a time (date) in which these samples will be collected.

We trust that this information fulfills your present needs. If you have any questions please call Stephen Andrus or Edward Summerly at (401)-421-4140.

Very truly yours,

GZA GEOENVIRONMENTAL, INC.

GENERAL NOTES

1 BASE MAP DEVELOPED FROM ELECTRONIC CAD FILES PROVIDED BY AEROTECH INTERNATIONAL DIGITAL PHOTOGRAMMETRIC MAPPING DATED 12-01-04, DATE FLOWN MARCH 26, 1999. THE TOPOGRAPHY OF THE LAGOONS, THE 1998, 2001 AND 2004 SOIL STOCK PILES WERE UPDATED BY INSTRUMENT SURVEY CONDUCTED BY GZA PERSONNEL IN SEPTEMBER 2004 THROUGH FEBRUARY 2005.

2 THE LOCATIONS AND ELEVATIONS OF MONITORING WELLS AND EXPLORATIONS WERE APPROXIMATELY DETERMINED BY SURVEY. THIS DATA SHOULD BE CONSIDERED ACCURATE ONLY TO THE DEGREE IMPLIED BY THE METHOD USED.

ATTACHMENT A

LIMITATIONS

GEOHYDROLOGICAL LIMITATIONS

1. The conclusions and recommendations submitted in this report are based in part upon the data obtained from a limited number of soil samples from widely spaced subsurface explorations. The nature and extent of variations between these explorations may not become evident until further investigation. If variations or other latent conditions then appear evident, it will be necessary to reevaluate the recommendations of this report.

2. The generalized soil profile described in the text is intended to convey trends in subsurface conditions. The boundaries between strata are approximate and idealized and have been developed by interpretations of widely spaced explorations and samples; actual soil transitions are probably more gradual. For specific information, refer to the boring logs.

3. Water level readings have been made in the test pits, borings and/or observation wells at times and under conditions stated on the exploration logs. These data have been reviewed and interpretations have been made in the text of this report. However, it must be noted that fluctuations in the level of the groundwater may occur due to variations in rainfall and other factors different from those prevailing at the time measurements were made.

4. The conclusions and recommendations contained in this report are based in part upon various types of chemical data and are contingent upon their validity. These data have been reviewed and interpretations made in the report. As indicated within the report, some of these data are preliminary "screening" level data, and should be confirmed with quantitative analyses if more specific information is necessary. Moreover, it should be noted that variations in the types and concentrations of contaminants and variations in their flow paths may occur due to seasonal water table fluctuations, past disposal practices, the passage of time, and other factors. Should additional chemical data become available in the future, these data should be reviewed by GZA, and the conclusions and recommendations presented therein modified accordingly.

5. Chemical analyses have been performed for specific parameters during the course of this study, as detailed in the text. It must be noted that additional constituents not searched for during the current study may be present in soil and groundwater at the site.

6. It is recommended that this firm be retained to provide further engineering services during design, implementation, and/or construction of any remedial measures, if necessary. This is to observe compliance with the concepts and recommendations contained herein and to allow design changes in the event that subsurface conditions differ from those anticipated.

Work Order No.: **0810-00020**

PROJECT NARRATIVE:

1. Sample Receipt

The samples were received on 10/02/08 via _x_GZA courier, __EC, __FEDEX, or ___hand delivered. The temperature of the _x_temperature blank/__cooler air, was 1.6 degrees C. The temperature requirement for most analyses is above freezing to 6 degrees C. The samples were received intact for all requested analyses.

The chain of custody indicates that the samples, when required, were chemically preserved in accordance with the method they reference.

2. EPA Method 8260 - VOCs

The percent recoveries for the surrogates in the diluted runs are as follows:

GP-26: 1,2- Dichloroethane-D4 - 85.3%, Toluene-D8 - 101%, 4-Bromofluorobenzene - 98.8%

The elevated reporting limits for samples GP-26 (0810-20-001), GZ-3 (0810-20-005) and GZ-20 (0810-20-006) are due to initial dilution of the samples in order to get target compounds within the calibration range of the instrument. The dilutions were based upon historical data for the samples.

Sample GZ-19 (0810-20-8) required a 1/500 dilution in order to get the compound tetrachloroethene within the calibration range of the instrument.

		Work Order No.:	**0810-00020**

Data Authorized By:

NELAC certification, as indicated by the NELAC Lab ID Number, is per analyte. For a complete list of NELAC validated analytes, please contact the laboratory.

Abbreviations:
% R = % Recovery
DF = Dilution Factor
DFS = Dilution Factor Solids
CF = Calculation Factor
DO = Diluted Out

Method Key:
Method 8260: The current version of the method is 8260B.
Method 8270: The current version of the method is 8270D.
Method 6010: The current version of the method is 6010B.

Please note that the laboratory signed copy of the chain of custody record is an integral part of the data report.

Soil data is reported on a dry weight basis unless otherwise specified.
Matrix Spike / Matrix Spike Duplicate sets are performed as per method and are reported at the end of the analytical report if assigned on the Chain of Custody.

PROJECT NARRATIVE:

1. Sample Receipt

The samples were received on 10/06/08 via _x_GZA courier, __EC, __FEDEX, or ___hand delivered. The temperature of the __temperature blank/_x_cooler air, was 2.7 degrees C. The temperature requirement for most analyses is above freezing to 6 degrees C. The samples were received intact for all requested analyses.

The chain of custody indicates that the samples, when required, were chemically preserved in accordance with the method they reference.

2. EPA Method 8260 - VOCs

Data Authorized By: _____

NELAC certification, as indicated by the NELAC Lab ID Number, is per analyte. For a complete list of NELAC validated analytes, please contact the laboratory.

Abbreviations:
%R = % Recovery
DF = Dilution Factor
DFS = Dilution Factor Solids
CF = Calculation Factor
DO = Diluted Out

Method Key:
Method 8260: The current version of the method is 8260B.
Method 8270: The current version of the method is 8270D.
Method 6010: The current version of the method is 6010B.

Please note that the laboratory signed copy of the chain of custody record is an integral part of the data report.

Soil data is reported on a dry weight basis unless otherwise specified.
Matrix Spike / Matrix Spike Duplicate sets are performed as per method and are reported at the end of the analytical report if assigned on the Chain of Custody.

www.gza.net

Dear Mr. Roy:

This letter with attachments serves as the third Quarterly UIC Monitoring Report of 2008, in compliance with the above referenced UIC Order of Approval for the Charbert facility located at 299 Church Street in Richmond (Alton), Rhode Island. It was prepared by GZA GeoEnvironmental, Inc., on behalf of our client Charbert, a Division of N.F.A. As you are aware, the Charbert facility stopped production in late February of 2008. Thus, there is no wastewater to sample in the pump house and no wastewater volume to report. This report includes the following information:

- Analytical test results from the six monitoring wells (designated MW-1A, MW-2A, MW-3, MW-4A, MW-5B and MW-6), which were analyzed for total and dissolved chromium, volatile organic compounds (VOCs), the semi-volatile organic compound bis(2-Ethylhexyl) phthalate and total petroleum hydrocarbons (TPH). The detected analytes have been summarized and compared to RIDEM's GA Groundwater Objectives and Groundwater Quality Preventative Action Limits (PALs) in Table 1, attached.
- Disposal system usage and monitoring well maintenance activities are summarized in Table 2.
- Static groundwater elevation measurements and field screening logs for each monitoring well are provided in Attachment A.
- Laboratory Certificates of Analysis are provided in Attachment B.

The groundwater results have been compared to the applicable groundwater standards for Rhode Island and there are no VOC, SVOC or TPH exceedances. However, as noted on Table 1, total chromium in the sample from well MW-1A was slightly higher than the PAL of 50 ug/L. Note that this well was sampled by bailing, versus the low-flow purge and sample method that is typically employed to minimize the entrainment of silty soils.

As noted in the field sampling log in Attachment A, the sample from this well was relatively turbid, with a turbidity value of 94 NTU, which can be an indication of suspended solids within the sample. Table 1 shows that the dissolved chromium concentration for this well was less than the PAL, consistent with the results obtained since chromium testing at the wells commenced in December 2007. Due to the significant depth to groundwater in this well, it has been routinely sampled by bailing and, as such, we believe the total chromium concentration was impacted by the sampling method and does not represent a change in groundwater conditions at the facility.

Acetone was detected at a concentration of 390 µg/l in the sample from MW-3. This concentration falls within the historical range for the site. RIDEM has not established a groundwater standard for acetone, so for reference purposes, we compared the findings to the EPA Region 9's preliminary remediation goals (PRGs). The PRG for acetone in drinking water is 610 µg/l, which is greater than the observed level.

We trust that this information fulfills your present needs. If you have any questions please call Stephen Andrus or Edward Summerly at (401)-421-4140.

Very truly yours,

GZA GEOENVIRONMENTAL, INC.

LAGOON INFLUENT SCHEDULE AND MAINTENANCE SCHEDULES
SEPTEMBER 2008

Charbert Facility
Richmond, Rhode Island

LAGOON INFLUENT SCHEDULE			
DATE	RECEIVING LAGOON	CHANGED TO LAGOON	REMARKS
March 2008 to September 2008	None	Cessation of Discharge	Facility closed February 24, 2008.
January 2007 to March 2008	1	No Change	All industrial waste water is discharged to Lagoon 1. Lagoon 1 is used as a settling pond, waste water is then transferred by an electric powered pump from Lagoon 1 to Lagoon 2. A second electric powered pump transfers waste water from Lagoon 2 to Lagoon 3.
January 2006 to January 2007	1	No Change	All industrial waste water is discharged to Lagoon 1. Lagoon 1 is used as a settling pond, waste water is then pumped by a electric powered pump from Lagoon 1 to Lagoon 2. A second electric powered pump transfers waste water from Lagoon 2 to Lagoon 3.
December 2005 to January 2006	1	No Change	An electric powered pump was installed to transfer industrial waste water from Lagoon 1 to Lagoon 2. A diesel powered pump transfers waste water from Lagoon 2 to Lagoon 3.

LAGOON MAINTENANCE SCHEDULE		
	Date	Remarks
Lagoon 1		There was no significant lagoon maintenance performed this quarter.
Lagoon 2		There was no significant lagoon maintenance performed this quarter.
Lagoon 3		There was no significant lagoon maintenance performed this quarter.

MONITORING WELL MAINTENANCE		
Well ID	Date	Remarks
MW-1A (GP-29)		Required No Maintenance
MW-2A		Required No Maintenance
MW-3 (RIZ-15)		Required No Maintenance
MW-4A		Required No Maintenance
MW-5B		Required No Maintenance
MW-6 (RIZ-20)		Required No Maintenance

PROJECT NARRATIVE:

1. Sample Receipt

The samples were received on 09/04/08 via _x_GZA courier, __EC, __FEDEX, or ___hand delivered. The temperature of the __temperature blank/_x_cooler air, was 3.8 degrees C. The temperature requirement for most analyses is above freezing to 6 degrees C. The samples were received intact for all requested analyses.

The chain of custody indicates that the samples, when required, were chemically preserved in accordance with the method they reference.

2. EPA Method 6010B/7470A - Metals

Attach QC 6010B 09/05/08 - Aqueous
Attach QC 7470A 09/05/08 - Aqueous

3. Total Petroleum Hydrcarbons

*Greater than 75% of the hydrocarbon content in samples MW-6, UIC-1A, UIC-2A, UIC-4A, and UIC-5B are due to the presence of non-petroleum products. These products were tentatively identified by GC/MS to fall in the class of alkylphenols and alkylphenol ethoxylates.

4. EPA Method 8270 - SVOCs

The Initial Calibration (ICAL) (08/27/08) (IABN162) had analytes whose %RSD was greater than 15%. The specific outliers include benzoic acid (23.1%) and 2,4-dinitrophenol (23.5%). These analytes are not target analytes for the associated samples

Attach QC 8270 09/08/08 - Aqueous

5. EPA Method 8260 - VOCs

The continuing calibration verification standard (CCV) (09/11/08) had analytes outside of the 30%D QC acceptance limit. The outliers include tert-butyl alcohol (TBA) (48%) and tetrahydrofuran (89%).

The continuing calibration verification standard (CCV) (09/12/08) had analytes outside of the 30%D QC acceptance limit. The outliers include tert-butyl alcohol (TBA) (38%) and tetrahydrofuran (90%).

Attach QC 8260 09/11/08 #2 A - Aqueous
Attach QC 8260 09/12/08 A - Aqueous

Project No.: **03.0032795.33**

Date Received: **09/04/2008**
Date Reported: **09/17/2008**
Work Order No.: **0809-00029**

Data Authorized By:

NELAC certification, as indicated by the NELAC Lab ID Number, is per analyte. For a complete list of NELAC validated analytes, please contact the laboratory.

Abbreviations:
% R = % Recovery
DF = Dilution Factor
DFS = Dilution Factor Solids
CF = Calculation Factor
DO = Diluted Out

Method Key:
Method 8260: The current version of the method is 8260B.
Method 8270: The current version of the method is 8270D.
Method 6010: The current version of the method is 6010B.

Please note that the laboratory signed copy of the chain of custody record is an integral part of the data report.

Soil data is reported on a dry weight basis unless otherwise specified.
Matrix Spike / Matrix Spike Duplicate sets are performed as per method and are reported at the end of the analytical report if assigned on the Chain of Custody.

Dear Ms. Taylor:

This letter with attachments serves as the third quarterly Perimeter Well Monitoring Report for the Charbert facility located at 299 Church Street in Richmond (Alton), Rhode Island. It was prepared by GZA GeoEnvironmental, Inc., on behalf of our client Charbert, Division of N.F.A.

In accordance with discussions during the conference call on April 23, 2008 between RIDEM and Charbert, it was agreed that, as part of the environmental monitoring, additional groundwater samples would be collected from perimeter wells located between the Charbert facility and nearby private wells and analyzed for VOCs, see Figure 1, attached. Perimeter monitoring wells included RIZ-1, GP-22, RIZ-21, GZ-1 and RIZ-14. Sample results from these wells were received on 1 May 2008. Based on previous results and the results of the Piezometric Monitoring Report dated May 2, 2008, RIDEM concurred with Charbert's recommendation (received via email 5/9/08) to sample these wells for a total of eight quarters. Following which the need for any future monitoring will be assessed.

Groundwater Sampling

GZA personnel were on site on October 3, 2008 and collected samples from five monitoring wells, RIZ-1, RIZ-14, RIZ-21, GP-22 and GZ-1. Groundwater sampling was performed in general accordance with EPA's July 30, 1996 *Low Stress (low flow) Purging and Sampling Procedure* (Low Flow SOP). Low flow sampling equipment (exclusive of tubing which was dedicated to the wells) was decontaminated prior to use on-site and between each location following EPA's required protocols. Water quality monitoring for stabilization was conducted utilizing a Horiba multi-meter in a flow through cell.

Analysis

As agreed upon, groundwater was analyzed for volatile organic compounds (VOCs) via EPA Method 8260B in samples from all five monitoring wells. The detected analytes have been summarized and compared to RIDEM's Method 1 GA Groundwater Objectives and Groundwater Quality Preventative Action Limits (PALs) in the attached Table 1. The low flow field screening results are provided in Table 2, attached, and the laboratory certificates of analysis are provided in Attachment A of the second quarter ICMP report.

Results

The October 3, 2008 groundwater results have been compared to the applicable groundwater standards for Rhode Island and there are GA Groundwater Standard exceedances for VOCs in two of the five wells. The remaining three wells had no VOCs detected above the method detection limit.

The sample from monitoring well GZ-1 has five VOCs detected with cis-1,2-dichloroethene present at 39 µg/L, (above the PAL of 35 µg/L), and trichloroethene present at 8 µg/L, (above the GA standard of 5 µg/L). The three other detects were 1,2,4-trimethylbenzene at 4.2 µg/L, tetrachloroethene at 1.6 µg/L, and 1,1-dichloroethane at 1.5 µg/L. The sample from monitoring well GP-22 has one VOC detected, tetrachloroethene reportedly present at 12 µg/L, (above the GA groundwater objective of 5 µg/L). For reference all previous analytical testing results for the five wells tested on October 3, 2008 have been included in Table 1.

As the organic compound tetrachloroethene had never been detected in monitoring well GP-22 prior to this, GZA consulted the laboratory. The laboratory could not find evidence that the samples had been contaminated during the analytical process and the trip blank did not contain tetrachloroethene. As such, GZA recommended that the well be re-sampled to further evaluate this compounds presence. On Tuesday, October 21, GZA re-sampled well GP-22 and collected a blind duplicate of the well labeled GP-100. No VOCs were detected above the method detection limit in either of the samples collected on October 21. This suggests that the detection of tetrachloroethene was likely related to an analytical artifact or a laboratory induced contamination that could not be readily identified by the labs routine quality control procedures.

At this time, we do not see any significant change in the pattern of migration of contaminants from the previously delineated areas of concern, and no changes in groundwater elevations that would suggest that a deleterious change in contaminant distribution is occurring. The perimeter wells will be sampled and analyzed on a quarterly basis for the next five quarters, after which the need to continue sampling these monitoring wells will be re-evaluated in conjunction with RIDEM.

Please feel free to call Ed or Steve at (401) 421-4140 (or via email at *esummerly@gza.com* or *stephen.andrus@gza.com*) with any questions or comments.

PROJECT NARRATIVE:

1. Sample Receipt

The samples were received on 10/06/08 via _x_GZA courier, __EC, __FEDEX, or ___hand delivered. The temperature of the __temperature blank/_x_cooler air, was 2.7 degrees C. The temperature requirement for most analyses is above freezing to 6 degrees C. The samples were received intact for all requested analyses.

The chain of custody indicates that the samples, when required, were chemically preserved in accordance with the method they reference.

Please note that the laboratory signed copy of the chain of custody record is an integral part of the data report.

Soil data is reported on a dry weight basis unless otherwise specified.
Matrix Spike / Matrix Spike Duplicate sets are performed as per method and are reported at the end of the analytical report if assigned on the Chain of Custody.

PROJECT NARRATIVE:

1. Sample Receipt

The samples were received on 10/22/08 via _x_GZA courier, __EC, __FEDEX, or ___hand delivered. The temperature of the __temperature blank/_x_cooler air, was 3.2 degrees C. The temperature requirement for most analyses is above freezing to 6 degrees C. The samples were received intact for all requested analyses.

The chain of custody indicates that the samples, when required, were chemically preserved in accordance with the method they reference.

2. EPA Method 8260 - VOCs

Attach QC 8260 10/31/08 #2 S - Aqueous

Data Authorized By: _____

NELAC certification, as indicated by the NELAC Lab ID Number, is per analyte. For a complete list of NELAC validated analytes, please contact the laboratory.

Abbreviations:
% R = % Recovery
DF = Dilution Factor
DFS = Dilution Factor Solids
CF = Calculation Factor
DO = Diluted Out

Method Key:
Method 8260: The current version of the method is 8260B.
Method 8270: The current version of the method is 8270D.
Method 6010: The current version of the method is 6010B.

Please note that the laboratory signed copy of the chain of custody record is an integral part of the data report.

Soil data is reported on a dry weight basis unless otherwise specified.
Matrix Spike / Matrix Spike Duplicate sets are performed as per method and are reported at the end of the analytical report if assigned on the Chain of Custody.
