RE: Quarterly O&M Status Report No. 48
Alvarez High School, 333 Adelaide Avenue, Providence, Rhode Island
Case No. 2005-029
EA Project No. 15066.07

Dear Mr. Martella:

On behalf of the City of Providence School Department (City), EA Engineering, Science, and Technology, Inc., PBC (EA) is providing this Quarterly Operations and Maintenance (O&M) Status Report in accordance with Provision 6(f) of the Order of Approval and amendments (Amended OA) for the referenced Alvarez High School site (the Site, formerly Adelaide Avenue High School).

This O&M Report summarizes recently completed Site activities related to compliance subslab vapor and indoor air sampling for the period from June 2019 through August 2019.

If you have any questions or require additional information, please contact me at (401) 736-3440, Ext. 1809.

Sincerely,

EA ENGINEERING, SCIENCE,
AND TECHNOLOGY, INC., PBC

Frank B. Postma, LSP, LEP, PG
Project Manager

APPENDICES

1. INTRODUCTION AND BACKGROUND

On behalf of the City of Providence School Department (the City), EA Engineering, Science, and Technology, Inc., PBC (EA) has prepared this Quarterly Operations and Maintenance (O&M) Status Report No. 48 for the Parcel B area of the former Gorham Manufacturing site in Providence, Rhode Island, formerly referred to as Adelaide Avenue High School and now referred to as Alvarez High School (the Site). A Site Location Map is provided as Figure 1. This report has been prepared to satisfy provision 6(f) of the Rhode Island Department of Environmental Management (RIDEM) Order of Approval (OA) issued in June 2006, as amended in February 2007, July 2007, and July 2009. For the purposes of this report, the original and the amended OA will collectively be referred to as the Amended OA.

The Amended OA specifies the details of the approved remedy for the Site including, but not limited to, the installation of a subslab depressurization (SSD) system, installation of a continuous indoor air methane monitoring system, and implementation of an associated periodic monitoring and sampling program. In August 2007, the RIDEM-approved remedy for the Site was completed and a Remedial Action Closure Report (RACR) was submitted to RIDEM. In July 2009, the periodic indoor air and subslab vapor sampling schedule was reduced to quarterly sampling from previously required monthly sampling.

This report summarizes the O&M, monitoring, and sampling activities completed at the Site for the three-month period from June 2019 through August 2019 (Quarterly Reporting Period No. 48). Please refer to Quarterly O&M Status Reports No. 1 through No. 47 for information regarding monitoring and sampling at the Site during the previous quarters. The RACR and previously submitted monthly correspondence contain details regarding the results of the monitoring and sampling program for the period prior to Reporting Period No. 1.

2. SUMMARY OF SSD SYSTEM AND INDOOR METHANE MONITORING SYSTEM PERFORMANCE

2.1 SSD SYSTEM AND RELATED MONITORING

The following SSD system performance parameters were inspected and/or monitored at the frequencies indicated below in accordance with the Amended OA and through discussions with RIDEM to evaluate system performance:

- Monthly sub-slab monitoring of vacuum pressure and vapor-phase constituents (18 June 2019, 29 July 2019, and 16 August 2019) at 11 monitoring locations, as illustrated on the As-Built Subslab Monitoring and Sampling Plan provided as Figure 3.

- Monthly inspections and monitoring (air velocity and vacuum) of the three rooftop fans to verify proper operation and effluent concentrations.

- Quarterly sampling (29 July 2019) of eight indoor air locations, one ambient outdoor air location, and six subslab points.

- Annual sampling (29 July 2019) of the three rooftop extraction fans.

- Monthly inspections of the electronic monitoring system associated with each of three SSD system extraction fans and the methane sensor system (automatic alarm notification via audible signal and phone notification).

Vacuum measurements taken at each interior and perimeter subslab monitoring/sampling locations ranged from -0.01 to -0.14 in. of water column. Negative measurements confirm that a negative pressure exists beneath the building slab due to continuous fan operation. All rooftop fans were observed to be operating correctly during this reporting period; pressure and air velocity recorded at all rooftop fans were within normal ranges.

On 12 November 2018, it was discovered that the electronic monitoring system associated with each of three SSD system extraction fans was not functioning as intended. On 15 April 2019, a certified electrician replaced and calibrated the pressure sensors on each fan, installed an additional alarm panel which is triggered when a change in pressure is detected in the rooftop exhaust fans, and connected the new alarm panel to the existing autodialer system. The exhaust fan alarm system was also connected to the existing back-up battery packs in the control panel, which have sufficient capacity to operate for multiple days in the event of an electrical outage or power disruption to the system.

On the morning of 26 July 2019, EA received an alarm notification from the rooftop exhaust fan autodialer system indicating that a malfunction had occurred. EA mobilized to the site and inspected the auto dialer alarm panel in the school administration office; The panel indicated that a rooftop fan malfunction had occurred. EA proceeded to Rooftop Fan #1 and Rooftop Fan #2;

pressure and air velocity of Rooftop Fans #1 and #2 were within normal ranges. EA measured the subslab pressure at IMP-1, directly beneath Rooftop Fan #3; a negative pressure of was observed. The negative fan vacuums, fan speeds, and the negative subslab pressures observed at the site were within normal ranges and the system appeared to be operating properly.

According to school staff, an Aramark electrician had been onsite testing the lighting system throughout the school that morning. EA spoke with the electrician and determined that the emergency notification was likely triggered due to the power disruption to the exhaust fan system; the fans had lost momentary power when the electrical breaker was tested but returned to normal operation once power was restored. The exhaust fan alarm, autodialer emergency notification system, and the autodialer back-up battery were functioning as intended and the April 2019 upgrades to the rooftop fan alarm system proved to be effective.

A new area of erosion near the back entrance to the kitchen storage room/loading ramp was observed in May 2019. Additionally, the previously noted 6-inch hole under a roof leader downspout at the back of the building and another eroded area approximately 3-4 inches deep observed near the back door to the school remain present. Depth of landscape erosion at the back door has been slowly increasing since spring 2017. EA met with city staff in 2018 to correct the deficiencies as soon as possible. EA has been informed that the Providence Public School Department will be correcting deficiencies.

Copies of O&M field forms summarizing SSD System monitoring data collected during this reporting period are provided in Appendix A.

2.2 INDOOR METHANE MONITORING SYSTEM

Indoor methane concentrations were continuously monitored by an indoor methane monitoring system equipped with automatic alarm notification via audible signal and phone notification within the school at eight RIDEM-approved locations (refer to the Indoor Air Sampling and Methane Monitoring System Diagram provided as Figure 2) during this reporting period. The annual autodialer cell phone contract was renewed on 21 December 2018 for another year of service. The methane monitoring system was inspected during each monitoring event, and the filters were replaced on 29 July 2019. The next filter replacement is scheduled for October 2019.

2.3 AMBIENT OUTDOOR AND INDOOR AIR SAMPLING

One ambient outdoor air sample and the eight indoor air samples were collected at the site at RIDEM-approved sampling locations during the quarterly sampling event on 29 July 2019. The samples collected in July 2019 were submitted to Con-Test Analytical Laboratory (Con-Test) for analysis of VOCs via Method TO-15 Selective Ion Monitoring (SIM). Each summa canister used during this monitoring period was individually certified to ensure that all containers were devoid of residual contamination. The typical summa canister certification process occurs in batches. However, individual certification was requested by RIDEM for this and future sampling events after residual contamination affected the 1 August 2014 sampling results.

Sample results were compared to the State of Connecticut's Draft Proposed Indoor Residential Targeted Air Concentrations (CT RTACs) and the RIDEM approved threshold level in accordance with the Amended OA. Sampling locations for the indoor air samples are illustrated on Figure 3. The 29 July 2019 ambient outdoor air sample was collected upwind (southwest) of the school. A data summary table is provided as Appendix B and a copy of the laboratory data report associated with this sampling event is provided in Appendix E.

The laboratory method detection limits (MDLs) for several VOCs reported via TO-15 analysis were greater than the respective CT RTACs/RIDEM threshold levels even though analysis was performed using the method with the lowest available detection levels (SIM procedure). The elevated MDLs occurred primarily with analytes that are not the constituents of concern (COCs) for the project. Additionally, many of these analytes have never been detected in indoor air at concentrations greater than the applicable standards. Therefore, the slightly elevated MDLs for some analytes were not significant and do not disqualify the dataset. Refer to Appendix F for an MDL verification letter from Con-Test verifying that where MDLs are not able to be met, the detection limit was the lowest currently achievable.

No analytes were identified in indoor air samples above the CT RTACs and RIDEM threshold levels during the July 2019 quarterly sampling event.

2.4 SUBSLAB VAPOR SAMPLING AND EVALUATION OF POTENTIAL VOC REBOUND EFFECT

A total of 11 RIDEM-approved subslab sampling locations are installed at the Site. Six subslab samples were collected on the rotating schedule in accordance with the Amended OA and analyzed for VOCs via US EPA Method TO-15 SIM. Four exterior subslab vapor samples and two interior subslab vapor samples were collected on 29 July 2019. The subslab analytical results are presented in Appendix C and a copy of the laboratory data report associated with this sampling event is included in Appendix E. The locations for sub-slab sampling are illustrated on Figure 3.

The subslab data has been evaluated for potential rebound. No evidence of increasing VOCs (i.e., VOC rebound) beneath the school has been observed. Slight fluctuations in concentrations were noted during this reporting period though these variations were within historical ranges and do not constitute an increasing trend.

2.5 SUMMARY OF ROOFTOP VOC EMISSIONS

The Amended OA requires that rooftop VOC sampling be completed on an annual basis; Rooftop fan sampling was conducted on 29 July 2019. The analytical results of rooftop fan sampling are summarized in Appendix D. No exceedances of the RIDEM Air Pollution Control Permit Applicability Thresholds for hourly, daily, or annual emissions were observed. The next annual rooftop effluent VOC sampling event is scheduled for July 2020.

Previous rooftop effluent sampling rounds conducted in March 2007 (immediately after SSD system startup), June 2007, June 2008, September 2009, July 2010, July 2011, July 2012, July 2013, October 2014, July 2015, July 2016 and July 2017 indicated compliance with all Air Pollution Control Permit Applicability Thresholds. Concentrations of VOCs in rooftop fan vents continue to be evaluated based on the regulatory thresholds and their effect to background air at the school and the nearby residential neighborhood. RIDEM conducted roofline and downwind outdoor air sampling during the 22 October 2014 monitoring event to determine if rooftop fan exhaust was possibly infiltrating the building or impacting downwind air. The roofline and downwind sample concentrations were approximately the same as the upwind sample concentration and significantly lower than those concentrations observed in the rooftop fan exhaust. This data indicated that exhausted vapors from the rooftop fans were well dispersed and are not causing significant impacts downwind or inside the building.

2.6 CONCLUSIONS

The following conclusions are made based upon the completed inspections, monitoring, and sampling performed during this reporting period:

- The consistent negative pressure maintained below the floor slab indicates that soil vapor intrusion into Alvarez High School is not occurring.

- The continuous operation of the SSD System and confirmation of continuous sub-slab vacuum beneath the school illustrates ongoing, effective operation of the SSD System.

- Deficiencies noted in the engineered cap near the kitchen storage room, the back (northern) entrance to the school, and the roof leader downspout at the northwestern corner of the school need to be corrected.

- The subslab data was evaluated for potential rebound in accordance with the Amended OA. No evidence of increasing VOCs (i.e., VOC rebound) beneath the school has been observed. Fluctuations in concentrations were noted during this reporting period; these variations do not constitute an increasing trend.

- The use of certified clean summa canisters, as requested by RIDEM, yielded confidence in the samples collected in July 2019. EA will continue to use certified clean canisters in the upcoming sampling events.

- During the 12 November 2018 alarm system inspection, it was discovered that the rooftop fan alarm and autodialer system was without power and not functioning as intended. This deficiency was corrected on 15 April 2019 and the exhaust fan alarm system and autodialer is now operating as intended.

3. FUTURE ACTIVITIES AND NEXT QUARTERLY SUMMARY REPORT

The following activities will be completed in accordance with the Amended OA during the next quarterly status reporting period from September 2019 to November 2019:

- Continuous monitoring of the operational status of the three rooftop fans;
- Monthly site inspections and monitoring using a calibrated photoionization detector with part-per-billion sensitivity and a Landtec multi-gas meter
- Collection of air samples from eight indoor locations, one ambient location, six subslab monitoring points, and the three rooftop fans in October 2019;
- Initiate erosion repairs to prevent damage to the engineered cap.

These activities will be summarized in the next status report (Quarterly Status Report No. 49), expected to be submitted by the end of December 2019.

Summary of Indoor and Ambient Outdoor Air Sampling Data - Alvarez School - Volatile Organic Compounds
February 2008 - July 2019

Volatile Organic Compounds via TO-15	CT Draft Proposed Indoor Residential Target Air Concentrations/ Interim RIDEM-Approved Action Level	Sample Date	Kitchen Storage Room	Qual	Cafeteria	Qual	Gymnasium	Qual	Elevator Hallway	Qual	Room 118	Qual	Room 110	Qual	Media Center (Rm 145)	Qual	Room 152	Qual	Room 149	Qual	Room 234	Qual	Ambient Outdoor (AOA-1)	Qual

* = Site Specific Compound of Concern per ATSDR Health Consultation, December 4, 2006.
**- Analyzed by Con-Test Analytical Laboratory
[1] Elevated Data is a result of inadvertant cross-contamination at the laboratory, and not resultant from soil vapor intrusion. Media Center/Room 145 was resampled on 28 January 2008 with Tetrachloroethylene concentration not detacted by the laboratory (MDL = 0.14 ug/m^3).
[2] Elevated Tetrachloroethylene and Acetone data detected on 27 March 2008 was determined to be the result of cleaning products (e.g., graffiti remover, stainless steel polish, etc.) introduced to the school in February and March, and not the result of soil vapor intrusion.
[3]: All samples collected on 20 April 2016 except for the Kitchen Storage Room, which was collected on 25 April 2016 due to inaccessibility of the room during spring break.
[4] All samples collected on 17 April 2017 except for the Kitchen Storage Room, which was collected on 25 April 2017 due to inaccessibility of the room during spring break.
[A] Summa canister had low pressure upon beginning sample colletion, possible interference.Re-sampling effort on 25 April 2008 indicates no exceedences of applicable Acetone and Tetrachloroethylene Action Levels.
[B] Analyte found in associated blank as well as the sample but not excpected to affect data due to sample concentration >10x concentation found in blank.
[M] Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the high side.
[L] Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the low side.
[V] Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
[W] Continuing calibration did not meet method specifications and was biased on the high side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the high side.
[J] Estimated result as the result was between the MDL and the RDL.
[I] Initial calibration verification did not meet standard. Reported value is likely to be biased on the high side.
[D] Elevated method detection limits due to failure of Con-test internal standards. Applies to Ambient Outdoor Air sample.

NOTES:
All data presented in micrograms per cubic meter (ug/m^3).
Two values displayed with a slash indicates dilutions resulting in two different concentrations
U = Designation indicates that the compound was not detected by the laboratory. Reporting limit shown in the data column.
NS = Not sampled.
None = No Draft Proposed CT Residential TAC for this compound.
= exceedance of interim RIDEM-approved action level

Summary of Subslab Air Sampling Data
Alvarez School
Volatile Organic Compounds
February 2008 - July 2019

Volatile Organic Compounds via TO-15	Sample Date	MP-1	Qual	MP-2	Qual	MP-3	Qual	MP-4	Qual	MP-5	Qual	MP-6	Qual	MP-7	Qual	MP-8	Qual	IMP-1	Qual	IMP-2	Qual	IMP-3	Qual

* Site Specific Compound of Concern per ATSDR Health Consultation, December 4, 2006.

M Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the high side.

L Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the low side.

V Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.

W Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the high side.

E Reported result is estimated due to value over calibration range

J Estimated result as the result was between the MDL and the RDL.

O One or more method internal standards were recovered outside of the contol limits. Sample re-analysis not possibe due to sample volume and detection limit constraints.

D Elevated method reporting limits for samples MP-5, MP-7, MP-8 and IMP-3 due to diluted matrices. Con-test internal standards failed and samples were re-pressurized and diluted.

NOTES:
All data presented in micrograms per cubic meter (ug/m^3).
Two values displayed with a slash indicates dilutions resulting in two different concentrations. Where two reporting limits were given for multilple dilutions, the lower RL was documented in this table.
U = Designation indicates that the compound was not detected by the laboratory. Reporting limit shown in the data column.
NS = Not sampled.

APPENDIX D

* RIDEM Air Pollution Control Regulation No. 9 [August 1971, Amended April 2004].

NOTES:
U = Indicates that chemical was not detected by the laboratory. To be conservative, the reporting limit shown in the concentration column was used in the emissions calculations.
L = Potential low bias due to uncertainty caused by continuing calibration not meeting method specifications or blank control sample recovery shown to be below the low side of control limits.
H = Potential high bias due to uncertainty caused by continuing calibration not meeting method specifications or blank control sample recovery shown to be above the high side of control limits.
B = Analyte found in associated blank sample but data is not affected by elevated level in blank since sample result is >10x level in the blank.

Hourly Emissions (lbs/hour) = VOC concentration (ug/m^3) x measured flow rate (cfm) x 0.02832 m^3/ft^3 x 60 min/hour x 0.001 mg/ug x 0.001 g/mg x 0.0022 lb/g.
Daily Emissions (lbs/day) = Hourly Emissions x 24 hours/day.
Yearly Emissions (lbs/year) = Daily Emissions x 365 days/year.
Where samples were anlyzed with multiple dilution factors, the highest reported value is shown

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

EPA TO-15

Qualifications:

E

Reported result is estimated. Value reported over verified calibration range.

Analyte & Samples(s) Qualified:

Acetone
19G1710-10[MP-1], 19G1710-11[MP-3], 19G1710-12[MP-4], 19G1710-13[MP-6], 19G1710-14[IMP-1], 19G1710-15[IMP-2], 19G1710-16[Rooftop Fan # 1], 19G1710-17[Rooftop Fan # 2], 19G1710-18[Rooftop Fan # 3]

L-03

Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the low side.

Analyte & Samples(s) Qualified:

1,1,1,2-Tetrachloroethane
19G1710-01[Gymnasium], 19G1710-02[Cafeteria], 19G1710-03[Kitchen Storage Room], 19G1710-04[Elevater Hallway], 19G1710-05[Room 145], 19G1710-06[Room 152], 19G1710-07[Room 118], 19G1710-08[Room 110], 19G1710-09[Ambient OutDoor], 19G1710-12[MP-4], 19G1710-13[MP-6], 19G1710-14[IMP-1], 19G1710-15[IMP-2], 19G1710-16[Rooftop Fan # 1], 19G1710-17[Rooftop Fan # 2], 19G1710-18[Rooftop Fan # 3], B237921-BLK1, B237921-BS1

V-05

Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

4-Methyl-2-pentanone (MIBK)
19G1710-01[Gymnasium], 19G1710-02[Cafeteria], 19G1710-03[Kitchen Storage Room], 19G1710-04[Elevater Hallway], 19G1710-05[Room 145], 19G1710-06[Room 152], 19G1710-07[Room 118], 19G1710-08[Room 110], 19G1710-09[Ambient OutDoor], 19G1710-12[MP-4], 19G1710-13[MP-6], 19G1710-14[IMP-1], 19G1710-15[IMP-2], 19G1710-16[Rooftop Fan # 1], 19G1710-17[Rooftop Fan # 2], 19G1710-18[Rooftop Fan # 3], B237921-BLK1, B237921-BS1, S039145-CCV1

EPA TO-15

Initial and continuing calibrations met all required performance standards for RCP compounds that are Title III Clean Air Act Amendment compounds listed in table 1 of the TO-15 method unless otherwise specified in this narrative.

Laboratory control sample recoveries and sample replicate RPDs were all within limits specified by the method for RCP compounds that are Title III Clean Air Act Amendment compounds listed in table 1 of the TO-15 method unless otherwise specified in this narrative. Recovery limits of 50-150% are used for propene, acetone, ethanol, isopropanol, ethyl acetate, tetrahydrofuran, cyclohexane, heptane, 2-hexanone, 4-ethyltoluene, n-butylbenzene, sec-butylbenzene, 4-isopropyltoluene, and 1,1,1,2-tetrachloroethane.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
E	Reported result is estimated. Value reported over verified calibration range.
L-03	Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the low side.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

I Have Not Confirmed Sample Container Numbers With Lab Staff Before Relinquishing Over Samples_____

con-test® ANALYTICAL LABORATORY

Doc# 278 Rev 6 2017

Air Media Sample Receipt Checklist - (Rejection Criteria Listing - Using Acceptance Policy) Any False Statement will be brought to the attention of the Client - State True or False

Client EA Engineering

Received By CF | Date 7/31/2019 | Time 1745

How were the samples received? In Cooler _____ | On Ice _____ | No Ice _____

In Box T | Ambient _____ | Melted Ice _____

Were samples within Temperature Compliance? 2-6°C N/A | By Gun # _____ | Actual Temp - _____

By Blank # _____ | Actual Temp - _____

Was Custody Seal Intact? N/A | Were Samples Tampered with? F

Was COC Relinquished ? T | Does Chain Agree With Samples? T

Are there any loose caps/valves on any samples? F

Is COC in ink/ Legible? T

Did COC Include all Pertinent Information? Client T | Analysis T | Sampler Name T

Project T | ID's T | Collection Dates/Times T

Are Sample Labels filled out and legible? T

Are there Rushes? F | Who was notified? _____

Samples are received within holding time? T

Proper Media Used? T | Individually Certified Cans? T

Are there Trip Blanks? F | Is there enough Volume? T

Containers:	#	Size	Regulator	Duration	Accessories:			
Summa Cans	18	6L	18	30 MIN	Nut/Ferrule		IC Train	
Tedlar Bags					Tubing			
TO-17 Tubes					T-Connector		Shipping Charges	
Radiello					Syringe			
Pufs/TO-11s					Tedlar

RE: RIDEM – Approved Action Level – Work Order 19D0806

Dear Mr. Postma:

This letter is in response to the RIDEM – Approved Action Levels provided. Several of the compounds, appear to be beyond the scope of the current methodologies available, as well as, the current analytical instrumentation available for these methods. The following compounds that Con-Test Laboratory had issues meeting the limits are listed below:

Bromodichloromethane
1,1,2,2-Tetrachloroethane
1,1,1,2-Tetrachloroethane
1,2-Dibromoethane

If you have any questions please feel free to call me at (413) 525-2332 ext. 41.

Sincerely,

Tod Kopyscinski
Laboratory Director
