| 32 | | | | | | | | | | | | | |
| 33 | | | | | | | | | | | | | |

REMARKS
 4 - 5 feet of casing was lost in the borehole from 9 to 14 feet bgs. The boring was aborted and resumed two feet to the north of the original location. The location was excavated via vacuum prior to resuming.
 5 - A groundwater monitoring well of the following construction was installed: 10 feet of 2" Diameter, Schedule 40, flush joint, threaded, 10-slot PVC well screen at 15 feet. 2" Diameter, Schedule 40, flush joint, threaded PVC Riser installed from 0-5 feet bgs; Filter Sand placed in annulus from 4-20 feet bgs; Bentonite Seals installed from 2-4 feet bgs. Remaining annulus filled with filter sand and clean soil cuttings. Well protected with a flush mounted roadbox.

See Log Key for explanation of sample description, identification procedures, and visual and odor impacts. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

REMARKS

1 - The upper 6 feet was cleared using an air knife and soil vactor truck. Soil samples were collected from the sidewalls. Therefore, blows and SPT values are not applicable for the vacuum excavated portion of the boring.

2 - The headspace of soil samples was screened for Total Volatile Organic Compounds (TVOCs) using a miniRae 3000 Photoionization Detector (PID) equipped with a 10.6 eV Lamp calibrated to a 100 ppmv isobutylene standard. ND indicates reading below the instruments detection limit of approximately 0.1 ppmv. N/A-Not Applicable, NM-Not Measured, bgs-below ground surface, WOH-Weight of Hammer

3 - Water table observed at 6 feet bgs.

See Log Key for explanation of sample description, identification procedures, and visual and odor impacts. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

REMARKS

1 - The upper 6 feet was cleared using an air knife and soil vactor truck. Soil samples were collected from the sidewalls. Therefore, blows and SPT values are not applicable for the vacuum excavated portion of the boring.

2 - The headspace of soil samples was screened for Total Volatile Organic Compounds (TVOCs) using a miniRae 3000 Photoionization Detector (PID) equipped with a 10.6 eV Lamp calibrated to a 100 ppmv isobutylene standard. ND indicates reading below the instruments detection limit of approximately 0.1 ppmv. N/A-Not Applicable, NM-Not Measured, bgs-below ground surface, WOH-Weight of Hammer

3 - Water table observed at 6 feet bgs.

See Log Key for explanation of sample description, identification procedures, and visual and odor impacts. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

REMARKS

4 - A groundwater monitoring well of the following construction was installed: 10 feet of 2" Diameter, Schedule 40, flush joint, threaded, 10-slot PVC well screen at 30 feet bgs. 2" Diameter, Schedule 40, flush joint, threaded PVC Riser installed from 0-20 feet bgs; Filter Sand placed in annulus from 19-30 feet bgs; Bentonite Seals installed from 18-19 feet bgs. Remaining annulus filled with filter sand and clean soil cuttings. Well protected with a flush mounted roadbox.

See Log Key for explanation of sample description, identification procedures, and visual and odor impacts. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

Notes:

ND - Not Detected NE - Not Established R - sample rejected by the lab
 NA - Not Analyzed N/A - Not Applicable

Bold Concentrations and shaded cells indicate an exceedance of RIDEM I/C-DEC

Underlined concentrations indicate an exceedance of RIDEM GB Leachability Criteria

Red text indicates an exceedance of RIDEM GB Upper Concentration Limits

1. This table indicates only compounds that were detected, other compounds were analyzed for, but not included here as there were no detections.
2. While the RIDEM Direct Exposure Criteria and GB Leachability Criteria apply to the vadose zone, certain subsurface soil samples were collected below the water table to define the nature and extent of impact. The data comparisons summarized in the tables compare all subsurface soil data (vadose and saturated zone) to the I/C-DEC and GB Leachability criteria.

Notes
 Well is located in the Natural Gas Regulator portion of the Property
 Well is located at the LNG Facility
 Well is located in the Former CNG Fueling Station portion of the Property
 Elevations are relative to NAVD88
 NP - Indicates No Product observed.
 NS - Not Surveyed
 Blanks indicate no measurement collected on that particular day.
 Potentiometric elevations for wells exhibiting LNAPL include 0.85 correction factor.
 NI - Not Installed

Notes

Well is located in the Natural Gas Regulator portion of the Property

Well is located at the LNG Facility

Well is located in the Former CNG Fueling Station portion of the Property

Elevations are relative to NAVD88

NP - Indicates No Product observed.

NS - Not Surveyed

Blanks indicate no measurement collected on that particular day.

Potentiometric elevations for wells exhibiting LNAPL include 0.85 correction factor.

NI - Not Installed

- NP - Indicates No Product observed.
- NS - Not Surveyed
- Blanks indicate no measurement collected on that particular day.
- Potentiometric elevations for wells exhibiting LNAPL include 0.85 correction factor.
- NI - Not Installed

TABLE Q-3
SUMMARY OF GROUNDWATER AND NAPL GAUGING RESULTS
 642 Allens Avenue
 Providence, Rhode Island

| Site Area | Well ID | Surveyed Elevations | | | Well Installation Details | | | | | Range of LNAPL Observed (feet) | Range of DNAPL Observed (feet) | June 2022 | | | | | | | | November 2022 | | | | | | | |
|-----------|---------|--------------------------------|-----------------------------|------------------------|---------------------------|---------------------|----------------------|--------------------------------|------------------------------|--------------------------------|--------------------------------|-----------------------|---------------------|---------------------|-----------------------|---------------------|------------------------|------------------------|--|-----------------------|---------------------|---------------------|-----------------------|---------------------|------------------------|------------------------|--|
| | | Top of Casing Elevation (Feet) | Top of PVC Elevation (Feet) | Grade Elevation (Feet) | Type of Well | Well Depth Modifier | Date of Installation | Measured Well Depth (feet bgs) | Screened Interval (feet bgs) | | | Depth to LNAPL (ft) | Depth to Water (ft) | Depth to DNAPL (ft) | Total Well Depth (ft) | GW Elevation (feet) | LNAPL Thickness (feet) | DNAPL Thickness (feet) | Corrected Groundwater Elevation (feet) | Depth to LNAPL (ft) | Depth to Water (ft) | Depth to DNAPL (ft) | Total Well Depth (ft) | GW Elevation (feet) | LNAPL Thickness (feet) | DNAPL Thickness (feet) | Corrected Groundwater Elevation (feet) |
| NG | RCA-1 | 12.21 | 11.82 | 12.21 | Roadbox | Shallow | 6/8/1994 | 15.89 | 6.5 - 16.5 | NP | NP | - | 5.45 | - | 14.65 | 6.37 | NP | NP | 6.37 | - | 5.75 | - | 14.87 | 6.07 | NP | NP | 6.07 |

Notes

- Well is located in the Natural Gas Regulator portion of the Property
- Well is located at the LNG Facility
- Well is located in the Former CNG Fueling Station portion of the Property
- Elevations are relative to NAVD88
- NP - Indicates No Product observed.
- NS - Not Surveyed
- Blanks indicate no measurement collected on that particular day.
- Potentiometric elevations for wells exhibiting LNAPL include 0.85 correction factor.
- NI - Not Installed

Notes:

ND - Not Detected NE - Not Established
NA - Not Analyzed N/A - Not Applicable

Bold Concentrations and shaded cells indicate an exceedance of RIDEM GB Groundwater Objectives

Red text and underlined concentrations indicate an exceedance of RIDEM GB Upper Concentration Limits

1. This table indicates only compounds that were detected, other compounds were analyzed for, but not included here as there were no detections.

2. The detected concentrations were compared to RIDEM Method 1 Criteria.

Notes:
 ND - Not Detected NE - Not Established
 NA - Not Analyzed N/A - Not Applicable

Bold Concentrations and shaded cells indicate an exceedance of RIDEM GB Groundwater Objectives

Red text and underlined concentrations indicate an exceedance of RIDEM GB Upper Concentration Limits

1. This table indicates only compounds that were detected, other compounds were analyzed for, but not included here as there were no detections.

2. The detected concentrations were compared to RIDEM Method 1 Criteria.

Providence, Rhode Island 02903 (401) 421-0398
Environmental Scientists, Engineers, and Planners

Client Providence Gas Company
Site Name Allens Avenue Remediation Project
Site Address 642 Allens Avenue, Providence, Rhode Island
Job Number P151-002
Contractor Tantara Corporation
Excavator Reach 12 feet

Test Pit No. E76
Date 10/5/00
Observed By Sean Driscoll
Checked By Gary Kaufman
Test Pit Depth 5.5 Feet
Groundwater Depth 5.5 Feet

Test Pit Description

0-2" Asphalt road surface.
3"-12" Black fine to medium cinders and some gravel. No odors.
12"-63" Light brown/yellow fine silty sand, trace blue fine silty sand. Slight odor.
63"-66" Black fine to medium sand. No odor.

Remarks:

Groundwater entering excavation at 5.5 feet. Blue staining observed throughout excavation. During excavation, light brown/yellow fine silty sand took on a dark blue coloration over time. Only slight odor emanating from excavation.

Location/Sketch:

Adjacent to Boring E76. See Figure 2 in SIR.

Test Pit Excavation Log

|  Environmental Science Services, Inc. 171 West Exchange Street, Suite 101 Providence, Rhode Island 02903 (401) 421-0398 Environmental Scientists, Engineers, and Planners | Client | Providence Gas Company | Test Pit No. | F56 |
| | Site Name | Allens Avenue Remediation Project | Date | 9/25/00 |
| | Site Address | 642 Allens Avenue, Providence, Rhode Island | Observed By | D. Issa, S. Courtemanche, A. Frye |
| | Job Number | P151-002 | Checked By | Gary Kaufman |
| | Contractor | Tantara Corporation | Test Pit Depth | 6 Feet |
| | Excavator Reach | 12 feet | Groundwater Depth | 6 Feet |

Test Pit Description

0-2" Asphalt parking lot.

2-14" Light tan fine sand with some gravel.

14-16" Fine black sand and coal ash. Dry no odors. No measurable PID.

16-24" Slag and red brick with traces of fine sand and silt. Dry.

24-30" Light brown fine to medium sand and gravel.

30-72" Slag and coal with red brick fragments. Wet at 72".

Remarks:

Groundwater entering excavation at approximately 6 feet. No visible sheen.
 No PID readings above background. No discernable odors.

Location/Sketch:

Adjacent to Boring F56. See Figure 2 in SIR.

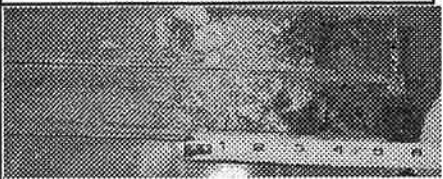

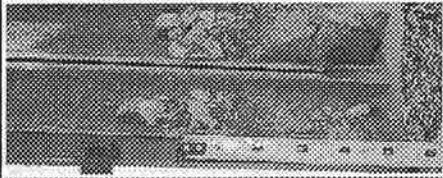

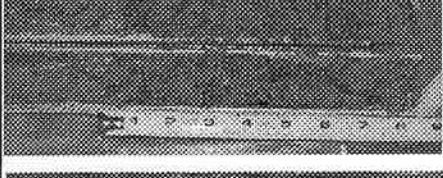

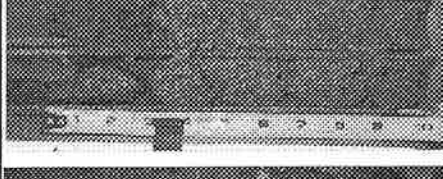

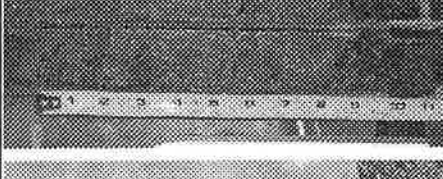

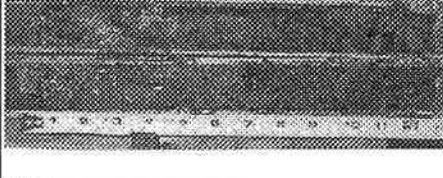

Soil Boring Report

PROJECT
New England Gas Company
642 Allens Avenue
Providence, Rhode Island

Report of Boring No. **VHB-2**
 Well ID: **VHB-2**
 Job Number: **71274** Sheet 1 of 1

Drilling Company: **Subsurface Drilling and Remediation** Boring Location: **West of asphalt pile.**
 Driller: **Jim Goldthwaite / Josh Downing** Elevation: **NA** Datum: **NA**
 Inspector: **Keith Sullivan / Adam Rosenblatt** Start Date: **1/16/2002** End Date: **1/16/2002**

The borings were drilled by hollow-stem auger. Unless otherwise noted, the soil samples were collected using a 2' split-spoon driven with a 140-lb. hammer falling 30".

| Depth (ft) | PID Reading | Sample No. | Pen/Rec | Blows/6" | SAMPLE DESCRIPTION | Boring Photo |
|------------|-------------|------------|---------|--------------------|--|--|
| 0 - 2 | ND | S1 | 24 / 5 | 19 - 18 20 - 19 | 3" Asphalt over 2" black coal fragments, dry, no sheen or odors. |  |
| 2 - 4 | ND | S2 | 24 / 5 | 19 - 7 9 - 8 | 5" Asphalt & coal fragments, dry, no sheen or odors. |  |

Notes:

ND - Not Detected - Not Established sample rejected by the lab
NA - Not Analyzed A - Not Applicable

Bold Concentrations and shaded cells indicate an exceedance of RIDEM I/C-DEC

Underlined concentrations indicate an exceedance of RIDEM GB Leachability Criteria

Red text indicates an exceedance of RIDEM Upper Concentration Limits

1. This table indicates only compounds that were detected, other compounds were analyzed for, but not included here as there were no detections.

2. While the RIDEM Direct Exposure Criteria and GB Leachability Criteria apply to the vadose zone, certain subsurface soil samples were collected below the water table to define the nature and extent of impact. The data comparisons summarized in the tables compare all subsurface soil data (vadose and saturated zone) to the I/C-DEC and GB Leachability

TABLE R-2
SUMMARY OF GROUNDWATER AND NAPL GAUGING RESULTS
 642 Allens Avenue
 Providence, Rhode Island

| Site Area | Well ID | Surveyed Elevations | | | Well Installation Details | | | | | Range of LNAPL Observed (feet) | Range of DNAPL Observed (feet) | June 2014 | | | | | | | |

Notes

Well is located in the Natural Gas Regulator portion of the Property

Well is located at the LNG Facility

Well is located in the Former CNG Fueling Station portion of the Property

Elevations are relative to NAVD88

NP - Indicates No Product observed.

NS - Not Surveyed

Blanks indicate no measurement collected on that particular day.

Potentiometric elevations for wells exhibiting LNAPL include 0.85 correction factor.

Note 1 - The readings reported from monitoring wells GZ-401 and GZ-403 in the October 2014 column were collected on November 3, 2015.

Note 2 - The readings reported from monitoring well Unknown-2 in the November 2020 column were collected on December 21, 2020.

Notes

Well is located in the Natural Gas Regulator portion of the Property

Well is located at the LNG Facility

Well is located in the Former CNG Fueling Station portion of the Property

Elevations are relative to NAVD88

NP - Indicates No Product observed.

NS - Not Surveyed

Blanks indicate no measurement collected on that particular day.

Potentiometric elevations for wells exhibiting LNAPL include 0.85 correction factor.

Note 1 - The readings reported from monitoring wells GZ-401 and GZ-403 in the October 2014 column were collected on November 3, 2015.

Note 2 - The readings reported from monitoring well Unknown-2 in the November 2020 column were collected on December 21, 2020.

Underlined concentrations indicate an exceedance of RIDEM GB Leachability Criteria

Red text indicates an exceedance of RIDEM Upper Concentration Limits

1. This table indicates only compounds that were detected, other compounds were analyzed for, but not included here as there were no detections.
2. While the RIDEM Direct Exposure Criteria and GB Leachability Criteria apply to the vadose zone, certain subsurface soil samples were collected below the water table to define the nature and extent of impact. The data comparisons summarized in the tables compare all subsurface soil data (vadose and saturated zone) to the I/C-DEC and GB Leachability criteria.

Test Pit Excavation Log

Environmental Science Services, Inc.
 272 West Exchange Street, Suite 101
 Providence, Rhode Island 02903 (401) 421-0398
 Environmental Scientists, Engineers, and Planners

| | | | |
|-----------------|---|-------------------|--------------|
| Client | Providence Gas Company | Test Pit No. | B09 |
| Site Name | Allens Avenue Remediation Project | Date | 9/5/00 |
| Site Address | 642 Allens Avenue, Providence, Rhode Island | Observed By | Daryll Issa |
| Job Number | P151-002 | Checked By | Gary Kaufman |
| Contractor | Tantara Corporation | Test Pit Depth | 10 feet |
| Excavator Reach | 12 feet | Groundwater Depth | 6 feet |

Test Pit Description

- 0-3" Fine/medium brown sand with some gravel, dry, no odor.
- 3-10" Fine/medium black sand with black cinders/ash, dry, no odor.
- 10-36" Fine light brown sand, dry, no odor.
- 36-48" Fine/medium gray to olive gray sand with trace gravel, dry, strong petroleum odor.
- 48-72" Fine/medium gray sand with trace gravel, damp, petroleum odor, PID=48.0 ppm.
- 72-120" Fine/medium gray sand with trace gravel, wet, petroleum odor, PID=48.0 ppm.

Remarks:

Groundwater entered hole at approximately 72". Was able to excavate to 120" prior to hole filling with water.

Location/Sketch:

Within 100 feet of the river, adjacent to B09. See Figure 2 in SIR.

Soil Boring Report

PROJECT
New England Gas Company
642 Allens Avenue
Providence, Rhode Island

Report of Boring No. **VHB-4**
 Well ID: **NA**
 Job Number: **71274** Sheet 1 of 1

Drilling Company: **Subsurface Drilling and Remediation**

Boring Location:

Driller: **Jim Goldthwaite / Josh Downing**

Elevation: **NA** Datum: **NA**

Inspector: **Keith Sullivan / Adam Rosenblatt**

Start Date: **1/14/2002** End Date: **1/14/2002**

The borings were drilled by hollow-stem auger. Unless otherwise noted, the soil samples were collected using a 2" split-spoon driven with a 140-lb. hammer falling 30".

| Depth (ft) | PID Reading | Sample No. | Pen/Rec | Blows/6" | SAMPLE DESCRIPTION | Boring Photo |
|------------|-------------|------------|---------|---------------------|---|--------------|
| 0 - 2 | 1.2 | S1 | 24 / 13 | 2 - 4 9 - 9 | Very dark grayish brown (10YR 3/2) over black (10YR 2/1) over very dark grayish brown (10YR 3/2) over light brownish gray (2.5Y 6/2) over black (10YR2/1), medium dense, fine SAND, little silt, some gravel, moist, no sheen or odors. | |
| 2 - 4 | ND | S2 | 24 / 9 | 5 - 6 14 - 20 | Black (10YR 2/1) over light brownish gray (2.5Y 6/2), medium dense, fine SAND, some gravel, moist, no sheen or odors. | |
| 4 - 6 | 3.0 | S3 | 24 / 13 | 6 - 9 6 - 7 | Very dark grayish brown (10YR 3/2) over light brownish gray (2.5Y 6/2), medium dense, fine SAND, some gravel, wet, no sheen or odors. | |
| 6 - 8 | 53.0 | S4 | 24 / 13 | 5 - 3 2 - 5 | Light brownish gray (2.5Y 6/2), loose, fine sand, trace gravel over black (10YR 2/1) fine sand, some silt, wet, faint chemical odor. | |
| 8 - 10 | 52.0 | S5 | 24 / 14 | 5 - 1 1 - 2 | Grayish brown (10YR 5/2), very loose, fine sand, little silt, trace gravel, wet, faint chemical odor, separate phase product. | |
| 10 - 12 | 46.0 | S6 | 24 / 6 | w/rod - 3 6 - 10 | Dark gray to dark grayish brown (2.5Y4/1-4/2) loose, fine sand, little silt, trace gravel, wet, faint chemical odor, separate phase product on sample bag. | |
| 12 - 14 | 20.0 | S7 | 24 / 4 | 4 - 5 9 - 10 | Black, medium dense, fine sand, little silt, some gravel, wet, moderate chemical odor, slight sheen on sample, stained. | |

Bottom of exploration 14' below grade.

REMARKS
1 - The upper 6 feet was cleared using an air knife and soil vactor truck. Soil samples were collected from the sidewalls. Therefore, blows and SPT values are not applicable for the vacuum excavated portion of the boring.
2 - The headspace of soil samples was screened for Total Volatile Organic Compounds (TVOCs) using a miniRae 3000 Photoionization Detector (PID) equipped with a 10.6 eV Lamp calibrated to a 100 ppmv isobutylene standard. ND indicates reading below the instruments detection limit of approximately 0.1 ppmv. N/A-Not Applicable, NM-Not Measured, bgs-below ground surface, WOH-Weight of Hammer
3 - Water table observed at 6 feet bgs.

See Log Key for explanation of sample description, identification procedures, and visual and odor impacts. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

REMARKS
 1 - No sampling completed at this location. See GZ-314D for sampling details. Stratum and impacts descriptions inferred from GZ-314D.
 2 - A groundwater monitoring well of the following construction was installed: 15 feet of 2" Diameter, Schedule 40, flush joint, threaded, 10-slot PVC well screen at 19 feet bgs. 2" Diameter, Schedule 40, flush joint, threaded PVC Riser installed from 0-4 feet bgs; Filter Sand placed in annulus from 3-19 feet bgs; Bentonite Seals installed from 2-3 feet bgs. Remaining annulus filled with filter sand. Well protected with a stand pipe.

See Log Key for explanation of sample description, identification procedures, and visual and odor impacts. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

REMARKS

1 - The upper 6 feet was cleared using an air knife and soil vactor truck. Soil samples were collected from the sidewalls. Therefore, blows and SPT values are not applicable for the vacuum excavated portion of the boring.

2 - The headspace of soil samples was screened for Total Volatile Organic Compounds (TVOCs) using a miniRae 3000 Photoionization Detector (PID) equipped with a 10.6 eV Lamp calibrated to a 100 ppmv isobutylene standard. ND indicates reading below the instruments detection limit of approximately 0.1 ppmv. N/A-Not Applicable, NM-Not Measured, bgs-below ground surface, WOH-Weight of Hammer

3 - 2" Crushed stone present at the surface

4 - Water table observed at 6 feet bgs.

See Log Key for explanation of sample description, identification procedures, and visual and odor impacts. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

Notes:
 ND - Not Detected NE - Not Established R - sample rejected by the lab
 NA - Not Analyzed N/A - Not Applicable

While the RIDEM Direct Exposure Criteria and GB Leachability Criteria apply to the vadose zone, certain subsurface soil samples were collected below the water table to define the nature and extent of impact. The data comparisons summarized in the tables compare all subsurface soil data (vadose and saturated zone) to the I/C-DEC and GB Leachability criteria.

Bold Concentrations and shaded cells indicate an exceedance of RIDEM I/C-DEC

Underlined concentrations indicate an exceedance of RIDEM GB Leachability Criteria

Red text indicates an exceedance of RIDEM Upper Concentration Limits

1. This table indicates only compounds that were detected, other compounds were analyzed for, but not included here as there were no detections.

Notes:
 ND - Not Detected NE - Not Established R - sample rejected by the lab
 NA - Not Analyzed N/A - Not Applicable

While the RIDEM Direct Exposure Criteria and GB Leachability Criteria apply to the vadose zone, certain subsurface soil samples were collected below the water table to define the nature and extent of impact. The data comparisons summarized in the tables compare all subsurface soil data (vadose and saturated zone) to the I/C-DEC and GB Leachability criteria.

Bold Concentrations and shaded cells indicate an exceedance of RIDEM I/C-DEC
Underlined concentrations indicate an exceedance of RIDEM GB Leachability Criteria
 Red text indicates an exceedance of RIDEM GB Upper Concentration Limits
 1. This table indicates only compounds that were detected, other compounds were analyzed for, but not included here as there were no detections.

Notes:

ND - Not Detected NE - Not Established R - sample rejected by the lab
NA - Not Analyzed N/A - Not Applicable

While the RIDEM Direct Exposure Criteria and GB Leachability Criteria apply to the vadose zone, certain subsurface soil samples were collected below the water table to define the nature and extent of impact. The data comparisons summarized in the tables compare all subsurface soil data (vadose and saturated zone) to the I/C-DEC and GB Leachability criteria.

Bold Concentrations and shaded cells indicate an exceedance of RIDEM I/C-DEC

Underlined concentrations indicate an exceedance of RIDEM GB Leachability Criteria

Red text indicates an exceedance of RIDEM GB Upper Concentration Limits

1. This table indicates only compounds that were detected, other compounds were analyzed for, but not included here as there were no detections.

Notes
 Well is located in the Natural Gas Regulator portion of the Property
 Well is located at the LNG Facility
 Well is located in the Former CNG Fueling Station portion of the Property
 Elevations are relative to NAVD88
 NP - Indicates No Product observed.
 NS - Not Surveyed
 Blanks indicate no measurement collected on that particular day.
 Potentiometric elevations for wells exhibiting LNAPL include 0.85 correction factor.
 NI - Not Installed

Notes

Well is located in the Natural Gas Regulator portion of the Property

Well is located at the LNG Facility

Well is located in the Former CNG Fueling Station portion of the Property

Elevations are relative to NAVD88

NP - Indicates No Product observed.

NS - Not Surveyed

Blanks indicate no measurement collected on that particular day.

Potentiometric elevations for wells exhibiting LNAPL include 0.85 correction factor.

NI - Not Installed

TABLE T-4

Notes:

ND - Not Detected
NE - Not Established
NA - Not Analyzed
N/A - Not Applicable

Bold Concentrations and shaded cells indicate an exceedance of RIDEM GB Groundwater Objectives
Red text and underlined concentrations indicate an exceedance of RIDEM GB Upper Concentration Limits

- This table indicates only compounds that were detected, other compounds were analyzed for, but not included here as there were no detections.
- The detected concentrations were compared to RIDEM Method 1 Criteria.

Notes:
 ND - Not Detected NE - Not Established
 NA - Not Analyzed N/A - Not Applicable

Bold Concentrations and shaded cells indicate an exceedance of RIDEM GB Groundwater Objectives
Red text and underlined concentrations indicate an exceedance of RIDEM GB Upper Concentration Limits

- This table indicates only compounds that were detected, other compounds were analyzed for, but not included here as there were no detections.
- The detected concentrations were compared to RIDEM Method 1 Criteria.

TABLE T-9
SUMMARY OF SHEEN OBSERVATIONS
642 Allens Avenue
Providence, Rhode Island

| Date of Observation | Time of Observation | Approximate Tidal Stage | Approximate Location of Sheen Observed | Description of Sheen Observed |
|---------------------|----------------------------------|-------------------------|---|---|
| 9/22/2011 | 8:40 | Low | Along shoreline stretching from RCA-40 to RCA-3. | Small dull spots. |
| 9/22/2011 | 9:00 | Low | Outfall proximate to Motiva property. | Moderate dull bands. |
| 9/22/2011 | 9:15 | Low | Along shoreline stretching from RCA-40 to RCA-3. | Large dull bands and moderate dull spots. |
| 10/28/2011 | 9:00 | High | No sheens observed. | |
| | 14:30 | Mid-Low | No sheens observed. | |
| 12/22/2011 | 10:40 | Low | Outside of Boom, along shoreline stretching from RCA-5 to RCA-20. | Moderate dull bands and small dull spots. |
| 12/22/2011 | 10:40 | Low | Within the boom, along shoreline stretching from CHES RW-5 to RW-3. | Large dull bands and moderate dull spots. |
| 12/22/2011 | 11:00 | Low | Outfall proximate to Motiva property. | Very small dull spots |
| 2/3/2012 | 12:00 | Low-Mid | Outside of Boom, north of the RIPDES outfall (within cove) | Moderate dull spots |
| 2/8/2012 | 15:10 | Mid | Within the boom, along shoreline stretching from CHES RW-5 to RW-3. | Small dull spots. |
| 2/15/2012 | 11:55 | Mid | Outside of Boom, along shoreline stretching from RCA-5 to RCA-20. | Small dull spots. |
| 2/15/2012 | 11:55 | Mid | Within the boom, along shoreline stretching from CHES RW-5 to RW-3. | Large bright bands. |
| 2/23/2012 | 15:00 | Low | No sheens observed. | |
| 3/2/2012 | 14:20 | High | Within the boom, along shoreline stretching from CHES RW-5 to RW-3. | Minor to moderate dull spots and bands of sheen |
| 3/2/2012 | 14:30 | High | Outfall proximate to Motiva property. | Large bright bands. |
| 3/9/2012 | 13:10 | Low | Outside of boom, along shoreline stretching from CHES RW-5 to RW-3. | Moderate to minor dull spots of sheen |
| 3/9/2012 | 13:05 | Low | Outfall proximate to Motiva property. | Slight bright bands of sheen |
| 4/13/2012 | 10:53 | Mid | Within the boom, along shoreline stretching from CHES RW-5 to RW-3. | Moderate to minor dull spots of sheen |
| 4/13/2012 | 10:58 | Mid | Outfall proximate to Motiva property. | Slight bright bands of sheen |
| 5/16/2012 | 13:45 | Mid-High | Within the boom, along shoreline stretching from CHES RW-5 to RW-3. | Minor to moderate dull bands of sheen |
| 5/16/2012 | 13:45 | Mid-High | Outfall proximate to Motiva property. | Moderate bright bands of sheen |
| 6/29/2012 | 9:35 | Low | Outside of boom, near LNG tank | Bright large sheen spot |
| 6/29/2012 | 9:35 | Low | Within the boom, along shoreline stretching from CHES RW-5 to RW-3. | Bright to dull bands of sheen |
| 6/29/2012 | 9:45 | Low | Outfall proximate to Motiva property. | Slight dull spots |
| 7/19/2012 | 9:50 | Low | Outside of Boom, north of the RIPDES outfall (within cove) to Propane House | Bright moderate sheen spots |
| 7/19/2012 | 9:50 | Low | Outfall proximate to Motiva property. | Bright moderate sheen spots |
| 8/2/2012 | 8:45 | High | Within the boom, along shoreline at CHES RW-4 | Bright moderate sheen bands |
| 8/24/2012 | 10:10 | Mid | Outside of boom, near CHES RW-4 | Bright moderate sheen spot |
| 8/24/2012 | 10:10 | Mid | Within the boom, from CHES RW-4 to Propane House | Bright moderate sheen spots and bands |
| 8/24/2012 | 10:10 | Mid | Outside of boom, from Propane House to RCA-3 | Bright slight sheen spots and bands |
| 8/24/2012 | 10:10 | Mid | Outfall proximate to Motiva property. | Bright slight sheen spots and bands |
| 9/6/2012 | No sheens observed at high tide. | | | |
| 9/13/2012 | 11:20 | Low | Within the boom, near CHES RW-4 | Bright slight sheen bands |
| 9/13/2012 | 11:45 | Low | Outside of boom, near CHES RW-4 | Bright slight sheen spot |
| 9/13/2012 | 11:45 | Low | Within the boom, between CHES RW-3 and CHES RW-4 | Bright moderate bands and spots of sheen |
| 9/25/2012 | 14:00 | Mid | Outfall proximate to Motiva property. | Slight bright bands of sheen |
| 10/31/2012 | 10:15 | High | Within the boom, near CHES RW-4 | Slight bright spots of sheen |
| 11/19/2012 | No sheens observed at high tide. | | | |
| 11/20/2012 | 16:20 | Mid-High | Within the boom, between CHES RW-3 and CHES RW-4 | Moderate long bright bands of sheen |
| 12/20/2012 | 12:00 | Mid-High | No sheens observed. | |

TABLE T-9
SUMMARY OF SHEEN OBSERVATIONS
642 Allens Avenue
Providence, Rhode Island

| Date of Observation | Time of Observation | Approximate Tidal Stage | Approximate Location of Sheen Observed | Description of Sheen Observed |
|---------------------|--|-------------------------|--|---|
| 1/4/2013 | No sheen observed at high tide. | | | |
| 2/1/2013 | No sheens observed at high tide. High wind was also noted. | | | |
| 2/26/2013 | 12:48 | Low | Within the boom, near CHES RW-4 | Slight bright spots of sheen |
| 2/26/2013 | 12:52 | Low | Within the boom, between CHES RW-3 and CHES RW-4 | Slight bright spots of sheen |
| 2/26/2013 | 12:56 | Low | Outfall proximate to Motiva property. | Moderate long bright bands of sheen |
| 3/22/2013 | 11:22 | Low | Within the boom, between CHES RW-3 and CHES RW-4 | Moderate bright bands of sheen |
| 3/25/2013 | 11:00 | Low | Within the boom, within sediments exposed at low tide between CHES RW-3 and CHES RW-4 | Slight sheen spots |
| 4/2/2013 | 11:00 | Mid | Within the boom, near CHES RW-4 | Bright bands of sheen |
| 4/24/2013 | No sheens observed at high tide. | | | |
| 4/30/2013 | No sheens observed at high tide. | | | |
| 5/6/2013 | No sheens observed at high tide. | | | |
| 5/14/2013 | 8:15 | Mid-High | Within the boom, between CHES RW-3 and CHES RW-4 | Bands of dull sheen |
| 5/24/2013 | No sheens observed at mid-high tide. | | | |
| 5/31/2013 | 8:00 | Low | Within the boom, between CHES RW-3 and CHES RW-5 | Slight dull bands and spots |
| 5/31/2013 | 9:45 | Mid | Within the boom, between CHES RW-3 and CHES RW-5 | Slight to moderate dull bands and spots |
| 5/31/2013 | 9:50 | Mid | Within the boom, within sediments exposed at mid tide between CHES RW-3 and CHES RW-4 | Bright spots of sheen |
| 6/2/2013 | No sheens observed at mid tide. High wind was also noted. | | | |
| 6/3/2013 | 9:10 | Low | Outside the boom, directly near the repair area (proximate to the gate area) in the LNG portion of the property | Bright to dull spots and blebs of sheen |
| 6/3/2013 | 9:10 | Low | Within the boom, between CHES RW-3 and CHES RW-5 | Moderate dull bands of sheen |
| 6/3/2013 | 12:30 | Mid | Within the boom, between CHES RW-3 and CHES RW-5 | Slight dull bands of sheen |
| 6/3/2013 | 13:15 | Mid | Outside the boom, along the edge of the LNG portion of the property, directly adjacent to the pathway. The sheen was noted as originating from the western part of the cove. | Slight dull bands of sheen |
| 6/10/2013 | No sheens observed at high tide. | | | |
| 6/11/2013 | 12:30 | Mid-High | Within the boom, between CHES RW-3 and CHES RW-5 | Moderate bright bands of sheen |
| 6/13/2013 | 14:25 | Mid | Within the boom, proximate to CHES RW-5 | Moderate dull to bright bands and spots |
| 6/19/2013 | No sheens observed at high tide. | | | |
| 6/20/2013 | 8:30 | Mid | Within the boom, between CHES RW-3 and CHES RW-5 | Moderate bright bands of sheen |
| 6/25/2013 | 11:00 | High | Within the boom, near CHES RW-4 | Slight bright spots of sheen |
| 7/31/2013 | No sheens observed at high tide. | | | |
| 8/28/2013 | 12:30 | Mid-High | Within the boom, directly near the repair area (proximate to the gate area) in the LNG portion of the property | Very slight bright spots |
| 9/5/2013 | 15:06 | Low | Within the boom, near CHES RW-4 | Bright to dull spots and blebs of sheen |
| 9/27/2013 | No sheens observed at high tide. High wind was also noted. | | | |
| 10/30/2013 | 8:30 | Mid | Within the boom, directly near the repair area (proximate to the gate area) in the LNG portion of the property | Very slight bright spots |
| 11/19/2013 | No sheens observed at high tide. High wind was also noted. | | | |
| 12/20/2013 | 10:15 | Mid - Low | Within the boom, directly near the repair area (proximate to the gate area) in the LNG portion of the property | Very slight bright spots |

TABLE T-9
SUMMARY OF SHEEN OBSERVATIONS
642 Allens Avenue
Providence, Rhode Island

| Date of Observation | Time of Observation | Approximate Tidal Stage | Approximate Location of Sheen Observed | Description of Sheen Observed |
|---------------------|--|-------------------------------|--|---|
| 1/27/2014 | 9:53 | Low | Outfall proximate to Motiva property. | Slight bright bands of sheen |
| 2/25/2014 | 14:00 | Mid - High | Within the boom, between CHES RW-3 and CHES RW-4 | Slight dull bands of sheen |
| 3/20/2014 | 9:15 | Mid - High | Within the boom, between CHES RW-3 and CHES RW-5 | Moderate long dull bands of sheen |
| 4/29/2014 | 12:30 | Mid-Low | Within the boom, between CHES RW-4 and CHES RW-5 | Slight dull bands of sheen |
| | 12:40 | | Outfall proximate to Motiva property. | Slight bright spots of sheen |
| 5/22/2014 | No sheens observed at high tide. High wind and rain were also noted. | | | |
| 6/3/2014 | No sheens observed at high tide. | | | |
| 7/24/2014 | No sheens observed at high tide. | | | |
| 8/24/2014 | No sheens observed at high tide. High wind was also noted. | | | |
| 9/24/2014 | 10:25 | High-Mid | Within the boom, near CHES RW-3 | Slight dull sheen spots and bands |
| | 10:30 | | Within the boom, near Propane House | Moderate dull to bright bands and spots |
| 10/30/2014 | 7:30 | Low | Inside and outside boom, between CHES RW-3 and CHES RW-5 | Slight bands of dull sheen |
| | | | Within the boom, near CHES RW-3 | Strong bright bands of sheen |
| 11/13/2014 | No sheens observed at high tide. | | | |
| 12/12/2014 | 14:00 | Mid | Within the boom, near CHES RW-3 | Slight dull bands of sheen |
| 1/29/2015 | No sheens observed at mid tide. | | | |
| 2/25/2015 | No sheens observed. Cove completely frozen over. | | | |
| 3/23/2015 | No sheens observed at high tide. High wind was also noted. | | | |
| 4/9/2015 | No sheens observed at high tide. High wind was also noted. | | | |
| 5/22/2015 | 7:43 | Low | Within the boom, near CHES RW-3 | Very slight bright spots |
| 6/17/2015 | No sheens observed at mid tide. High wind was also noted. | | | |
| 7/17/2015 | 11:29 | Mid | Within the boom, between CHES RW-3 and RCA-5 | Moderate to bright spots of sheen |
| 8/28/2015 | 12:20 | Low | Inside and outside boom, between CHES RW-3 and CHES RW-5 | Moderate dull spots of sheen |
| 9/16/2015 | 9:40 | Mid-High | Within the boom, near CHES RW-3 | Slight dull bands of sheen |
| 10/14/2015 | No sheens observed at high tide. | | | |
| 11/17/2015 | No sheens observed at high tide. | | | |
| 12/30/2015 | No sheens observed at high tide. | | | |
| 1/29/2016 | No sheens observed at mid tide. | | | |
| 2/22/2016 | 12:00 | Mid-High | Within Boom near CHES RW-3 | Slight sheen spots |
| 3/16/2016 | 8:30 | Mid-High | Within Boom between CHES RW-3 and CHES RW-5 | Minor sheening. Dull to bright streaks of sheen |
| 4/28/2016 | 3:30 | Mid-High | Within Boom near CHES RW-3 | Bright Plates/Streaks of Sheen |
| 5/19/2016 | 11:00 | Mid-Low | Within Boom near CHES RW-3 | Dull plates of sheen |
| 6/10/2016 | No sheens observed at mid-high tide. | | | |
| 7/26/2016 | 10:00 | Low | Within Boom near CHES RW-3 | Slight sheen |
| 8/30/2016 | 13:00 | Low | Inside and outside boom, between CHES RW-3 and CHES RW-5 | Plates of sheen |
| 9/16/2016 | 9:00 | High | Within Boom | Slight Sheen (Streaks) |
| 10/30/2016 | No sheens observed | | | |
| 11/30/2016 | 11:00 | Mid | Within Boom near CHES RW-3 | Platlets of sheen |
| 12/13/2016 | 11:45 | No sheen observed at low tide | | |

TABLE T-9
SUMMARY OF SHEEN OBSERVATIONS
642 Allens Avenue
Providence, Rhode Island

| Date of Observation | Time of Observation | Approximate Tidal Stage | Approximate Location of Sheen Observed | Description of Sheen Observed |
|---------------------|---------------------------------|--|---|--|
| 1/31/2017 | No sheens observed at mid tide | | | |
| 2/27/2017 | 9:00 | Mid-Low | Within Boom near CHES RW-3 | Streaks of sheen |
| 3/24/2017 | No sheens observed at high tide | | | |
| 4/28/2017 | No sheens observed at high tide | | | |
| 5/5/2017 | No sheens observed at high tide | | | |
| 6/30/2017 | No sheens observed at high tide | | | |
| 7/27/2017 | No sheens observed at high tide | | | |
| 8/1/2017 | 16:00 | High | Within Boom near CHES RW-3 | Some plates of sheen |
| 9/1/2017 | 12:50 | Mid | Within Boom near CHES RW-3 | Dull streaks of sheen |
| 9/29/2017 | 11:00 | Mid-High | Within Boom near CHES RW-3 | Some streaks of sheen |
| 10/24/2017 | No sheens observed at high tide | | | |
| 11/21/2017 | No sheens observed at high tide | | | |
| 12/21/2017 | No sheens observed at low tide | | | |
| 1/24/2018 | 13:00 | No sheens observed at high tide | | |
| 2/21/2018 | 12:00 | No sheens observed at high tide | | |
| 3/20/2018 | 11:00 | No sheens observed at high tide | | |
| 4/26/2018 | 7:00 | No sheens observed at high tide | | |
| 5/15/2018 | 14:00 | No sheens observed at low tide | | |
| 6/28/2018 | 14:00 | No sheens observed at low tide | | |
| 7/30/2018 | 13:00 | Mid | Along shoreline. | Some streaks of sheen, dull to bright plates |
| 8/30/2018 | 9:30 | Mid-high | Between hard boom and shore | Dull streaks of sheen |
| 10/1/2018 | 7:00 | Low | Between hard boom and shore | Bright streaks of sheen |
| 10/30/2018 | 10:30 | No sheens observed at mid tide | | |
| 11/14/2018 | 7:00 | No sheens observed at high tide | | |
| 12/19/2018 | 11:15 | Low tide | No sheens observed | |
| 1/30/2019 | 11:00 | Low tide | Between hard boom and shore proximate to former well RW-3 | Dull streaks of sheen |
| 2/27/2019 | 13:00 | Mid-high tide | Between hard boom and shore proximate to former well RW-3 | Dull plates and streaks of sheen |
| 3/20/2019 | 13:00 | Low | Between hard boom and shore proximate to former well RW-3 | Dull plates and bright streaks of sheen |
| 4/22/2019 | 11:00 | No sheens observed at high tide | | |
| 5/31/2019 | 7:00 | No sheens observed at high tide | | |
| 6/26/2019 | 15:00 | High | Between hard boom and shore proximate to former well RW-3 | Dull plates of sheen |
| 7/25/2019 | 14:30 | High | Between hard boom and shore proximate to former well RW-3 | Dull plates of sheen |
| 8/22/2019 | 13:00 | High | Between hard boom and shore proximate to former well RW-3 | Dull plates of sheen |
| 9/27/2019 | 7:00 | No sheens observed at high tide | | |
| 10/21/2019 | 14:30 | No sheens observed at high tide | | |
| 11/21/2019 | 10:00 | Mid Tide | Between hard boom and shore proximate to former well RW-3 | Dull plates of sheen |
| 12/18/2019 | 9:00 | No sheens observed at mid tide | | |
| 1/24/2020 | 8:30 | Mid Tide | Along shoreline proximate to former well RW-3. | Dull to bright plates of sheen |
| 2/24/2020 | 12:00 | No sheens observed at low tide | | |
| 3/26/2020 | 12:45 | No sheens observed at mid to high tide | | |
| 4/23/2020 | 8:00 | No sheens observed at high tide | | |
| 5/22/2020 | 8:45 | No sheens observed at high tide | | |
| 6/9/2020 | 15:00 | No sheens observed at mid to low tide | | |
| 7/17/2020 | 12:30 | Mid-low Tide | Along shoreline proximate to former well RW-3. | Slight dull to bright plates of sheen |
| 8/11/2020 | 7:15 | Mid Tide | Between hard boom and shore proximate to former well RW-3 | Large dull to bright plates of sheen |
| 8/20/2020 | 12:15 | No sheens observed at mid to low tide | | |
| 9/22/2020 | 9:00 | No sheens observed at mid to high tide | | |
| 10/26/2020 | 12:00 | No sheens observed at low tide | | |
| 11/24/2020 | 7:00 | No sheens observed at mid to high tide | | |
| 12/11/2020 | 10:37 | Low Tide | Between hard boom and shore proximate to former well RW-3 | Minor dull to bright plates of sheen |

TABLE T-9
SUMMARY OF SHEEN OBSERVATIONS
642 Allens Avenue
Providence, Rhode Island

| Date of Observation | Time of Observation | Approximate Tidal Stage | Approximate Location of Sheen Observed | Description of Sheen Observed |
|---------------------|---------------------|--------------------------------------|---|-------------------------------|
| 1/22/2021 | 13:37 | Mid Tide | Between hard boom and shore proximate to former well RW-3 | |
| 2/9/2021 | 7:07 | High-tide | Between hard boom and shore proximate to former well RW-3 | Minor dull plates of sheen |
| 3/15/2021 | 8:54 | Mid Tide | Between hard boom and shore proximate to former well RW-3 | |
| 4/20/2021 | 11:51 | Mid Tide | Between hard boom and shore proximate to former well RW-3 | |
| 5/21/2021 | 13:14 | Mid Tide | Between hard boom and shore proximate to former well RW-3 | Minor dull plates of sheen |
| 6/23/2021 | 10:00 | Low-tide | Between hard boom and shore proximate to former well RW-3 | Minor dull plates of sheen |
| 7/26/2021 | 7:29 | Mid Tide | Between hard boom and shore proximate to former well RW-3 | Large bright plates of sheen |
| 8/13/2021 | 10:39 | High-tide | Between hard boom and shore proximate to former well RW-3 | Minor dull plates of sheen |
| 9/27/2021 | 10:10 | Mid Tide | Between hard boom and shore proximate to former well RW-3 | Minor dull plates of sheen |
| 10/18/2021 | 15:01 | Mid Tide | Between hard boom and shore proximate to former well RW-3 | |
| 11/18/2021 | 12:10 | Low-tide | Between hard boom and shore proximate to former well RW-3 | |
| 12/20/2021 | 10:23 | High-tide | Between hard boom and shore proximate to former well RW-3 | |
| 1/21/2022 | 9:58 | No sheens observed at high tide | | |
| 2/17/2022 | 10:34 | Mid Tide | Between hard boom and shore proximate to former well RW-3 | Minor bright plates of sheen |
| 3/30/2022 | 9:00 | No Sheen observed at Low to Mid Tide | | |
| 4/27/2022 | 15:36 | Low Tide | Between hard boom and shore proximate to former well RW-3 | Dull plates of sheen |
| 5/5/2022 | 15:26 | High Tide | Between hard boom and shore proximate to former well RW-3 | Dull plates of sheen |
| 6/2/2022 | 14:26 | High Tide | Between hard boom and shore proximate to former well RW-3 | Some Dull plates of sheen |
| 7/7/2022 | 8:00 | No sheen observed at Low Tide | | |
| 8/18/2022 | 9:30 | No sheen observed at Mid Tide | | |
| 9/15/2022 | 9:30 | No sheen observed at Mid Tide | | |
| 10/1/2022 | 13:00 | No sheen observed at Mid Tide | | |
| 11/3/2022 | 12:30 | No sheen observed at Mid to Low Tide | | |

1. This table shows observations that were made along the Site shoreline. Observations were made least monthly.
2. Observations made on 9/22/2011 were made before containment boom was repaired. Boom was repaired on 10/28/2011.
3. Boom was repaired and the absorbent sausage boom was replaced on 8/2/2012.
4. Boom was repaired and sections of the absorbent sausage boom was replaced on 11/20/12.
5. Boom was repaired and sections of the absorbent sausage boom was replaced on 2/12/2013.
6. A water line directly proximate to the Providence River at the LNG facility unexpectedly failed on May 31, 2013. This water line provided fire protection for the LNG facility. Immediate response actions included deploying additional absorbent booms, repairing a rip-rap slope and temporarily repairing the line for fire protection. The water line was replaced in the fall of 2013. Additional boom was deployed on May 31, 2013 and June 3, 2013 after additional sheens were observed outside the original boom configuration.
7. Boom was repaired and sections of the absorbent sausage boom was replaced on 10/4/2013.
8. Absorbent boom replaced 3/20/14
9. Absorbent boom replaced 11/13/14
10. Hard Boom and absorbent boom was replaced on 4/9/15
11. Absorbent boom replaced 11/17/15
12. Absorbent boom replaced 3/3/16.
13. Absorbent boom replaced 7/13/16
14. Absorbent boom replaced 2/23/17.
15. Absorbent boom replaced 6/7/17.
16. Absorbent boom replaced 10/6/17.
17. Boom was damaged during a storm in 2018. Absorbent boom replaced 4/12/18.
18. Absorbent boom replaced 10/25/18.
19. Absorbent boom replaced 5/10/19.
20. Absorbent boom replaced 10/1/19.
21. Absorbent boom replaced 5/21/20.
22. Absorbent boom replaced 11/6/20.
23. Absorbent boom re-anchored 12/21/20.

REMARKS
1 - This boring was completed with an air knife and soil vactor truck. Soil samples were collected from the sidewalls. Therefore, blows and SPT values are not applicable for the vacuum excavated portion of the boring.
2 - The headspace of soil samples was screened for Total Volatile Organic Compounds (TVOCs) using a miniRae 3000 Photoionization Detector (PID) equipped with a 10.6 eV Lamp calibrated to a 100 ppmv isobutylene standard. ND indicates reading below the instruments detection limit of approximately 0.1 ppmv. N/A-Not Applicable, NM-Not Measured, bgs-below ground surface, WOH-Weight of Hammer
3 - Water table observed at 4 feet bgs.

See Log Key for explanation of sample description, identification procedures, and visual and odor impacts. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

REMARKS

1 - This boring was completed with an air knife and soil vactor truck. Soil samples were collected from the sidewalls. Therefore, blows and SPT values are not applicable for the vacuum excavated portion of the boring.
 2 - The headspace of soil samples was screened for Total Volatile Organic Compounds (TVOCs) using a miniRae 3000 Photoionization Detector (PID) equipped with a 10.6 eV Lamp calibrated to a 100 ppmv isobutylene standard. ND indicates reading below the instruments detection limit of approximately 0.1 ppmv. N/A-Not Applicable, NM-Not Measured, bgs-below ground surface, WOH-Weight of Hammer
 3 - Water table observed at 5 feet bgs.

See Log Key for explanation of sample description, identification procedures, and visual and odor impacts. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

Notes:

ND - Not Detected NE - Not Established R - sample rejected by the lab
NA - Not Analyzed N/A - Not Applicable

Bold Concentrations and shaded cells indicate an exceedance of RIDEM I/C-DEC

Underlined concentrations indicate an exceedance of RIDEM GB Leachability Criteria

Red text indicates an exceedance of RIDEM Upper Concentration Limits

- This table indicates only compounds that were detected, other compounds were analyzed for, but not included here as there were no detections.
- While the RIDEM Direct Exposure Criteria and GB Leachability Criteria apply to the vadose zone, certain subsurface soil samples were collected below the water table to define the nature and extent of impact. The data comparisons summarized in the tables compare all subsurface soil data (vadose and saturated zone) to the I/C-DEC and GB Leachability criteria.

Notes:

ND - Not Detected NE - Not Established R - sample
 NA - Not Analyzed N/A - Not Applicable rejected by the lab

Bold Concentrations and shaded cells indicate an exceedance of RIDEM I/C-DEC

Underlined concentrations indicate an exceedance of RIDEM GB Leachability Criteria

Red text indicates an exceedance of RIDEM Upper Concentration Limits

- This table indicates only compounds that were detected, other compounds were analyzed for, but not included here as there were no detections.
- While the RIDEM Direct Exposure Criteria and GB Leachability Criteria apply to the vadose zone, certain subsurface soil samples were collected below the water table to define the nature and extent of impact. The data comparisons summarized in the tables compare all subsurface soil data (vadose and saturated zone) to the I/C-DEC and GB Leachability criteria.

Notes

Well is located in the Natural Gas Regulator portion of the Property

Well is located at the LNG Facility

Well is located in the CNG Fueling Station portion of the Property

Elevations are relative to City of Providence Datum

NP - Indicates No Product observed.

NS - Not Surveyed

Blanks indicate no measurement collected on that particular day.

Potentiometric elevations for wells exhibiting LNAPL include 0.85 correction factor.

Notes

Well is located in the Natural Gas Regulator portion of the Property

Well is located at the LNG Facility

Well is located in the CNG Fueling Station portion of the Property

Elevations are relative to City of Providence Datum

NP - Indicates No Product observed.

NS - Not Surveyed

Blanks indicate no measurement collected on that particular day.

Potentiometric elevations for wells exhibiting LNAPL include 0.85 correction factor.

Notes:

ND - Not Detected

NE - Not Established

NA - Not Analyzed

N/A - Not Applicable

Bold Concentrations and shaded cells indicate an exceedance of RIDEM GB Groundwater Objectives

Red text and underlined concentrations indicate an exceedance of RIDEM GB Upper Concentration Limits

1. This table indicates only compounds that were detected, other compounds were analyzed for, but not included here as there were no detections.
2. The detected concentrations were compared to RIDEM Method 1 Criteria.

Soil Boring Report

PROJECT
New England Gas Company
642 Allens Avenue
Providence, Rhode Island

Report of Boring No. **VHB-4**
 Well ID: **NA**
 Job Number: **71274** Sheet 1 of 1

Drilling Company: **Subsurface Drilling and Remediation**

Boring Location:

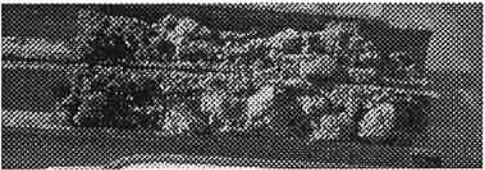

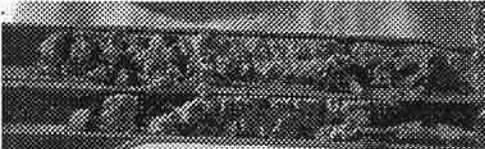

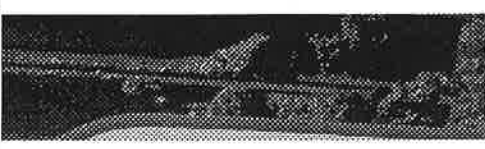

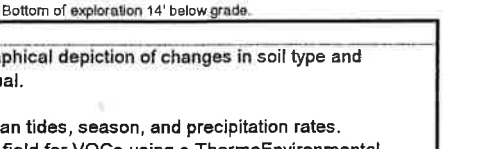

Driller: **Jim Goldthwaite / Josh Downing**

Elevation: **NA** Datum: **NA**

Inspector: **Keith Sullivan / Adam Rosenblatt**

Start Date: **1/14/2002** End Date: **1/14/2002**

The borings were drilled by hollow-stem auger. Unless otherwise noted, the soil samples were collected using a 2" split-spoon driven with a 140-lb. hammer falling 30".

| Depth (ft) | PID Reading | Sample No. | Pen/Rec | Blows/6" | SAMPLE DESCRIPTION | Boring Photo |
|------------|-------------|------------|---------|---------------------|---|--|
| 0 - 2 | 1.2 | S1 | 24 / 13 | 2 - 4 9 - 9 | Very dark grayish brown (10YR 3/2) over black (10YR 2/1) over very dark grayish brown (10YR 3/2) over light brownish gray (2.5Y 6/2) over black (10YR2/1), medium dense, fine SAND, little silt, some gravel, moist, no sheen or odors. |  |
| 2 - 4 | ND | S2 | 24 / 9 | 5 - 6 14 - 20 | Black (10YR 2/1) over light brownish gray (2.5Y 6/2), medium dense, fine SAND, some gravel, moist, no sheen or odors. |  |
| 4 - 6 | 3.0 | S3 | 24 / 13 | 6 - 9 6 - 7 | Very dark grayish brown (10YR 3/2) over light brownish gray (2.5Y 6/2), medium dense, fine SAND, some gravel, wet, no sheen or odors. |  |
| 6 - 8 | 53.0 | S4 | 24 / 13 | 5 - 3 2 - 5 | Light brownish gray (2.5Y 6/2), loose, fine sand, trace gravel over black (10YR 2/1) fine sand, some silt, wet, faint chemical odor. |  |
| 8 - 10 | 52.0 | S5 | 24 / 14 | 5 - 1 1 - 2 | Grayish brown (10YR 5/2), very loose, fine sand, little silt, trace gravel, wet, faint chemical odor, separate phase product. |  |
| 10 - 12 | 46.0 | S6 | 24 / 6 | w/rod - 3 6 - 10 | Dark gray to dark grayish brown (2.5Y4/1-4/2) loose, fine sand, little silt, trace gravel, wet, faint chemical odor, separate phase product on sample bag. |  |
| 12 - 14 | 20.0 | S7 | 24 / 4 | 4 - 5 9 - 10 | Black, medium dense, fine sand, little silt, some gravel, wet, moderate chemical odor, slight sheen on sample, stained. |  |

Bottom of exploration 14' below grade.

REMARKS

1 - The upper 6 feet was cleared using an air knife and soil vactor truck. Soil samples were collected from the sidewalls. Therefore, blows and SPT values are not applicable for the vacuum excavated portion of the boring.

2 - The headspace of soil samples was screened for Total Volatile Organic Compounds (TVOCs) using a miniRae 3000 Photoionization Detector (PID) equipped with a 10.6 eV Lamp calibrated to a 100 ppmv isobutylene standard. ND indicates reading below the instruments detection limit of approximately 0.1 ppmv. N/A-Not Applicable, NM-Not Measured, bgs-below ground surface, WOH-Weight of Hammer

3 - Water table observed at 6 feet bgs.

See Log Key for explanation of sample description, identification procedures, and visual and odor impacts. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

REMARKS

4 - A groundwater monitoring well of the following construction was installed: 10 feet of 2" Diameter, Schedule 40, flush joint, threaded, 10-slot PVC well screen at 36 feet bgs, 2" Diameter, Schedule 40, flush joint, threaded PVC Riser installed from 0-26 feet bgs; Filter Sand placed in annulus from 0-2, 3-24 and 25-36 feet bgs; Bentonite Seals installed from 2-3 and 24-25 feet bgs. Remaining annulus filled with filter sand. Well protected with a stand pipe.

See Log Key for explanation of sample description, identification procedures, and visual and odor impacts. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

TABLE V-1 - SOIL TPH FINGERPRINTING RESULTS

File No. 03.0033554.01

RCA-3 DNAPL DATA GAP

1/5/2024

642 Allens Ave

Providence, Rhode Island

| | Units | RCA-3 | ETP-38 | GZ-313D |
|-------------------------------------|-------|---------------|------------|-----------|
| | | 8 - 10 ft bgs | 8.5 ft bgs | 18-20 FT |
| | | 1994 | 1996 | 5/27/2014 |
| Total Petroleum Hydrocarbons | | | | |
| Hydrocarbon Content | mg/kg | 11,100 | 9,580 | 1,210 |

Notes:

1. The characteristics of the chromatogram for soil sample RCA-3 8-10 ft bgs indicate "Fuel Oil".
2. The characteristics of the chromatogram for soil sample ETP-38 8.5 ft bgs indicate "Fuel Oil mixed with Coal Tar".
3. The characteristics of the chromatogram for GZ-313D 18-20 ft bgs indicate that the product is composed exclusively of tar impacted hydrocarbons. The tar material present in this sample indicates varying degrees of weathering.

Notes

- Well is located in the Natural Gas Regulator portion of the Property
 - Well is located at the LNG Facility
 - Well is located in the CNG Fueling Station portion of the Property
- Elevations are relative to City of Providence Datum
 NP - Indicates No Product observed.
 NS - Not Surveyed
 Blanks indicate no measurement collected on that particular day.
 Potentiometric elevations for wells exhibiting LNAPL include 0.85 correction factor.

Notes:

Well is located in the Natural Gas Regulator portion of the Property

Well is located at the LNG Facility

Well is located in the CNG Fueling Station portion of the Property

NG - Not Gauged

RCA-3 was decommissioned in June 2016. May 2016 was the last reading.

This table presents NAPL thickness data for monitoring wells that have exhibited NAPL thicknesses of at least trace amounts since 2001.

Gray shading indicates NAPL thickness of equal to or more than 0.01 feet

ND - Not Detected

NI - Not Installed Yet

Dest - Destroyed

trace - sheen or less than 0.01 feet

Notes:
 ND - Not Detected NE - Not Established
 NA - Not Analyzed N/A - Not Applicable

Bold Concentrations and shaded cells indicate an exceedance of RIDEM GB Groundwater Objectives

Red text and underlined concentrations indicate an exceedance of RIDEM GB Upper Concentration Limits

1. This table indicates only compounds that were detected, other compounds were analyzed for, but not included here as there were no detections.
 2. The detected concentrations were compared to RIDEM Method 1 Criteria.

Notes

Elevations are relative to City of Providence Datum

NP - Indicates No Product observed.

NS - Not Surveyed

Blanks indicate no measurement collected on that particular day.

Potentiometric elevations for wells exhibiting LNAPL include 0.85 correction factor.

Notes

Elevations are relative to City of Providence Datum

NP - Indicates No Product observed.

NS - Not Surveyed

Blanks indicate no measurement collected on that particular day.

Potentiometric elevations for wells exhibiting LNAPL include 0.85 correction factor.

Notes:

ND - Not Detected NE - Not Established
NA - Not Analyzed N/A - Not Applicable

Bold Concentrations and shaded cells indicate an exceedance of RIDEM GB Groundwater Objectives

Red text and underlined concentrations indicate an exceedance of RIDEM GB Upper Concentration Limits

- This table indicates only compounds that were detected, other compounds were analyzed for, but not included here as there were no detections.
- The detected concentrations were compared to RIDEM Method 1 Criteria.

| | | S | 5 | 4-6-8-8 (17.0") | 14 | SP | S-5: Sand, poorly graded, coarse to fine, mostly medium to fine, 5-15% subrounded gravel to 1 1/4", <10% nonplastic fines, medium dense, wet, olive gray, slight hydrocarbon odor. |
| | 15 | S | 6 | 0-1-2-1 (9.0") | 3 | SP OL | S-6A (Top 4"): Similar to S-5. S-6B (Bot. 5"): Organic silt, moderately plastic, 5-10% fine to medium sand, soft, moist, brownish gray, hydrocarbon odor. |
| | | S | 7 | 0-1-1-1 | 2 | OL | S-7: Similar to S-6B, except pockets of dark gray, medium to fine sand. |
| | 20 | U | 1 | PUSH (19.0") | | OL | U-1: Organic silt, slightly plastic, 5-10% fine to medium sand, moist, dark olive, shells. |
| | | S | 8 | 0-1-1-1 (18.0") | 2 | OL | S-8: Organic silt, slightly plastic, 5-15% coarse to fine sand, mostly fine sand, very soft to soft, moist, brownish gray, trace organic fibers. |

Legend/Notes

- Datum is NGVD 1929.
- ∇ indicates groundwater level.
- █ indicates location of samples.
- Blows = number of blows required to drive 2" O.D. sample spoon 6" or distance shown using 140 pound hammer falling 30".
- () = inches of sample recovery.
- Recovery = % rock core recovery.
- RQD = Rock Quality Designation.
- SPT N = Standard Penetration Test resistance to driving, blows/ft.
- USC = Unified Soil Classification system.
- * indicates use of 300 pound hammer.

• **Sample Type:**

- S = Standard split-spoon
- U = Undisturbed tube

Legend/Notes

- Datum is NGVD 1929.
- indicates groundwater level.
- indicates location of samples.
- Blows = number of blows required to drive 2" O.D. sample spoon 6" or distance shown using 140 pound hammer falling 30".
- () = inches of sample recovery.
- Recovery = % rock core recovery.
- RQD = Rock Quality Designation.
- SPT N = Standard Penetration Test resistance to driving, blows/ft.
- USC = Unified Soil Classification system.
- * indicates use of 300 pound hammer.

• Sample Type:
 S = Standard split-spoon
 U = Undisturbed tube

Ground Elevation: 10.47 ft

Total Depth Drilled: 52 ft

Rig Type: CME-75

Methods:

Casing Used: None

Drilling Soil: 4.25" hollow-stem augers

Sampling Soil: Standard split-spoon sampler driven using a CME automatic SPT hammer

Drilling Rock: None

Comments: Groundwater depth as noted during drilling.

| Elev (ft) | Depth (ft) | Sample | | Blows or Recovery RQD | SPT N Value | USC Symbol | Sample Description |
|-----------|------------|--------|-----|-----------------------|-------------|----------------|--|
| | | Type | No. | | | | |
| 10.5 | 0 | | | | | | Post hole to 4", FILL. |
| 10 | | | | | | | |
| | 5 | S | 1 | 4-3-2-2 (14.0") | 5 | SW-SM | S-1: Gravelly sand, widely graded, 10-20% subangular gravel to 3/4". fine to coarse sand, 5-10% nonplastic fines, loose, damp, light brown, some roots, slight hydrocarbon odor, dark oily band at bottom of sample. |
| | | S | 2 | 3-4-4-6 (12.0") | 8 | SW-SM | S-2: Similar to S-1, except very oily, strong hydrocarbon odor, light gray bottom 4" of sample. |
| | | S | 3 | 4-4-5-7 (16.0") | 9 | SW-SM SP-SM | S-3A (Top 4"): Similar to S-2. S-3B (Bot. 12"): Silty sand, uniform, fine, 10-15% nonplastic fines, loose, light gray, very oily, hydrocarbon odor. Did not collect sample, too oily. |
| 0 | 10 | S | 4 | 6-7-9-11 (17.0") | 16 | SP-SM | S-4: Sand, uniform, fine, <5% subrounded gravel to 1 1/2" (shale), 5-10% nonplastic fines, medium dense, gray brown, very oily, strong hydrocarbon odor. |
| | | S | 5 | 9-11-14-15 (15.0") | 25 | SW-SM GW-GM | S-5A (Top 6"): Sand, fine to coarse, 5-10% nonplastic fines in lenses, medium dense, brown. S-5B (Bot. 9"): Sandy gravel, widely graded, subangular to subrounded to 1 1/2", fine to coarse sand, 5-15% nonplastic fines, medium dense, brown, strong hydrocarbon odor. |
| | 15 | S | 6 | 7-8-10-15 (8.0") | 18 | SP | S-6: Sand, poorly graded, 5-10% subrounded gravel to 1", fine to medium sand, mostly medium, medium brown, hydrocarbon odor. |
| -5 | | S | 7 | 15-9-6-4 (18.0") | 15 | SP | S-7: Similar to S-6. |
| | | S | 8 | 16-16-14-16 (1.0") | 30 | SP | S-8: Sandy gravel, similar to S-5B. |
| -10 | 20 | S | 9 | 20-16-9-8 (5.0") | 25 | GP-GM | S-9: Sandy gravel, poorly graded, flat, subrounded gravel to 1 1/4", 15-20%, fine to coarse sand, 5-10% nonplastic fines, medium dense, light brown and black, hydrocarbon odor. |

Legend/Notes

- Datum is NGVD 1929.
- ▽ indicates groundwater level.
- ■ indicates location of samples.
- Blows = number of blows required to drive 2" O.D. sample spoon 6" or distance shown using 140 pound hammer falling 30".
- () = inches of sample recovery.
- Recovery = % rock core recovery.
- RQD = Rock Quality Designation.
- SPT N = Standard Penetration Test resistance to driving, blows/ft.
- USC = Unified Soil Classification system.
- * indicates use of 300 pound hammer.

Sample Type:

S = Standard split-spoon

Comments: Groundwater depth as noted during drilling.

| Elev (ft) | Depth (ft) | Sample | | Blows or Recovery RQD | SPT N Value | USC Symbol | Sample Description |
|--------------|---------------|--------|-----|--------------------------------|-------------------|-------------------|---|
| | | Type | No. | | | | |
| 11.0 | 0 | | | | | | Auger to 2' |
| | | | | | | | Fill: 10-20% gravel to 2". fine to coarse sand, 5-10% nonplastic fines, damp, light yellow, green staining. |
| | | S | 1 | 8-10-12-46 (9.0') | 22 | GP-GM | S-1: Sandy gravel, subangular to 1 3/8", 20-30% fine to coarse sand, 5-10% nonplastic fines, medium dense, damp, dark brown gravel and light yellow green sand. |
| | | S | 2 | 28-32-33-40 (22.0') | 65 | GP | S-2: Sandy gravel, poorly graded, subangular to 1 1/2", 10-20% fine to coarse sand, mostly medium, <5% nonplastic fines, very dense, dry, mottled (pink, yellow, brown, and green gray, due to chemical staining); gravel disintegrated. |
| | | S | 3 | 14-17-19-36 (15.0') | 36 | GP | S-3: Similar to above, except 30-40% sand, dense, saturated. |
| | | S | 4 | 18-22-28-35 (20.0') | 50 | SP-SM | S-4: Gravelly sand, 15-25% gravel to 1", fine to coarse sand, mostly fine, 5-10% slightly plastic fines, dense to very dense, mottled (yellow brown and tan). |
| | | S | 5 | 14-19-22-28 (18.0') | 41 | GP | S-5: Sandy gravel, poorly graded, subangular to 1 1/2", 10-20% fine to coarse sand, <5% nonplastic fines, dense, light brown. |
| | | S | 6 | 18-24-22-27 (16.0') | 46 | GP-GM | S-6: Sandy gravel, subangular to subrounded to 1 1/2", 20-30% fine to coarse sand, 5-10% slightly plastic fines in pockets, dense, mottled (light brown, yellow, taupe, and green (possible staining)). |
| | | S | 7 | 14-12-16-22 (6.0') | 28 | GP-GM | S-7: Similar to S-6, except medium dense. |
| | | S | 8 | 10-12-18-16 | 30 | SP | S-8: Sand, poorly graded, rounded, fine to coarse, mostly medium, <5% nonplastic fines, medium dense to dense, gray with black organic layers. |
| | | S | 9 | 17-14-19-24 (16.0') | 33 | SP GW-GM SP | S-9A (Top 4" and Lower Mid 2"): Sand, uniform, fine, <5% nonplastic fines, dense, gray brown. S-9B (Upper Mid. 9"): Sandy gravel, subangular to 1 3/4", 30-40% fine to coarse sand, mostly fine, 5-10% nonplastic fines, dense, light olive. |

Legend/Notes

- Datum is NGVD 1929.
- ∇ indicates groundwater level.
- █ indicates location of samples.
- Blows = number of blows required to drive 2" O.D. sample spoon 6" or distance shown using 140 pound hammer falling 30".
- () = inches of sample recovery.
- Recovery = % rock core recovery.
- RQD = Rock Quality Designation.
- SPT N = Standard Penetration Test resistance to driving, blows/ft.
- USC = Unified Soil Classification system.
- * indicates use of 300 pound hammer.

• Sample Type:
S = Standard split-spoon

REMARKS:
 7. Use mud to keep hole open after S-32.
 8. Sand blew into casing approximately ±8'.
 9. Drillers removed 5" casing and installed 3" casing, mud added.
 10. Possible boulder encountered, difficult drilling.

REMARKS

1 - The upper 6 feet was cleared using an air knife and soil vactor truck. Soil samples were collected from the sidewalls. Therefore, blows and SPT values are not applicable for the vacuum excavated portion of the boring.

2 - The headspace of soil samples was screened for Total Volatile Organic Compounds (TVOCs) using a miniRae 3000 Photoionization Detector (PID) equipped with a 10.6 eV Lamp calibrated to a 100 ppmv isobutylene standard. ND indicates reading below the instruments detection limit of approximately 0.1 ppmv. N/A-Not Applicable, NM-Not Measured, bgs-below ground surface, WOH-Weight of Hammer

3 - Water table observed at 8 feet bgs.

See Log Key for explanation of sample description, identification procedures, and visual and odor impacts. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

REMARKS

4 - A groundwater monitoring well of the following construction was installed: 10 feet of 2" Diameter, Schedule 40, flush joint, threaded, 10-slot PVC well screen at 30 feet bgs, 2" Diameter, Schedule 40, flush joint, PVC Riser installed from 0-20 feet bgs; Filter Sand placed in annulus from 19-30 feet bgs; Bentonite Seals installed from 16-19 feet bgs. Remaining annulus filled with filter sand and clean soil cuttings. Well protected with a flush mounted roadbox.

See Log Key for explanation of sample description, identification procedures, and visual and odor impacts. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

REMARKS

4 - A groundwater monitoring well of the following construction was installed: 10 feet of 2" Diameter, Schedule 40, flush joint, threaded, 10-slot PVC well screen at 30 feet. 2" Diameter, Schedule 40, flush joint, threaded PVC Riser installed from 0-20 feet bgs; Filter Sand placed in annulus from 19-30 feet bgs; Bentonite Seals installed from 2-4 and 18-19 feet bgs. Remaining annulus filled with filter sand and clean soil cuttings. Well protected with a flush mounted roadbox.

See Log Key for explanation of sample description, identification procedures, and visual and odor impacts. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

REMARKS
1 - The upper 6 feet was cleared using an air knife and soil vactor truck. Soil samples were collected from the sidewalls. Therefore, blows and SPT values are not applicable for the vacuum excavated portion of the boring.
2 - The headspace of soil samples was screened for Total Volatile Organic Compounds (TVOCs) using a miniRae 3000 Photoionization Detector (PID) equipped with a 10.6 eV Lamp calibrated to a 100 ppmv isobutylene standard. ND indicates reading below the instruments detection limit of approximately 0.1 ppmv. N/A-Not Applicable, NM-Not Measured, bgs-below ground surface, WOH-Weight of Hammer
3 - Water table observed at 6.5 feet bgs.

See Log Key for explanation of sample description, identification procedures, and visual and odor impacts. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

REMARKS

4 - A groundwater monitoring well of the following construction was installed: 10 feet of 2" Diameter, Schedule 40, flush joint, threaded, 10-slot PVC well screen at 30 feet bgs. 2" Diameter, Schedule 40, flush joint, threaded PVC Riser installed from 0-20 feet bgs; Filter Sand placed in annulus from 19-30 feet bgs; Bentonite Seals installed from 18-19 feet bgs. Remaining annulus filled with filter sand and clean soil cuttings. Well protected with a flush mounted roadbox.

See Log Key for explanation of sample description, identification procedures, and visual and odor impacts. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

REMARKS
1 - The upper 4 feet was cleared using an air knife and soil vactor truck. Soil samples were collected from the sidewalls. Therefore, blows and SPT values are not applicable for the vacuum excavated portion of the boring.
2 - The headspace of soil samples was screened for Total Volatile Organic Compounds (TVOCs) using a miniRae 3000 Photoionization Detector (PID) equipped with a 10.6 eV Lamp calibrated to a 100 ppmv isobutylene standard. ND indicates reading below the instruments detection limit of approximately 0.1 ppmv. N/A-Not Applicable, NM-Not Measured, bgs-below ground surface, WOH-Weight of Hammer
3 - Water table observed at 4 feet bgs.

See Log Key for explanation of sample description, identification procedures, and visual and odor impacts. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

| 33 | | | | | | | | | | | | | |

REMARKS

4 - A groundwater monitoring well of the following construction was installed: 10 feet of 2" Diameter, Schedule 40, flush joint, threaded, 10-slot PVC well screen at 30 feet bgs. 2" Diameter, Schedule 40, flush joint, threaded PVC Riser installed from 0-20 feet bgs; Filter Sand placed in annulus from 14-30 feet bgs; Bentonite Seals installed from 1-2 and 13-14 feet bgs. Remaining annulus filled with filter sand. Well protected with a stand pipe.

See Log Key for explanation of sample description, identification procedures, and visual and odor impacts. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

REMARKS

1 - The upper 6 feet was cleared using an air knife and soil vactor truck. Soil samples were collected from the sidewalls. Therefore, blows and SPT values are not applicable for the vacuum excavated portion of the boring.

2 - The headspace of soil samples was screened for Total Volatile Organic Compounds (TVOCs) using a miniRae 3000 Photoionization Detector (PID) equipped with a 10.6 eV Lamp calibrated to a 100 ppmv isobutylene standard. ND indicates reading below the instruments detection limit of approximately 0.1 ppmv. N/A-Not Applicable, NM-Not Measured, bgs-below ground surface, WOH-Weight of Hammer

3 - Water table observed at 6 feet bgs.

See Log Key for explanation of sample description, identification procedures, and visual and odor impacts. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

REMARKS
 1 - The upper 6 feet was cleared using an air knife and soil vactor truck. Soil samples were collected from the sidewalls. Therefore, blows and SPT values are not applicable for the vacuum excavated portion of the boring.
 2 - The headspace of soil samples was screened for Total Volatile Organic Compounds (TVOCs) using a miniRae 3000 Photoionization Detector (PID) equipped with a 10.6 eV Lamp calibrated to a 100 ppmv isobutylene standard. ND indicates reading below the instruments detection limit of approximately 0.1 ppmv. N/A-Not Applicable, NM-Not Measured, bgs-below ground surface, WOH-Weight of Hammer
 3 - 2" Crushed stone present at the surface
 4 - Water table observed at 6 feet bgs.

See Log Key for explanation of sample description, identification procedures, and visual and odor impacts. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

REMARKS

5 - A groundwater monitoring well of the following construction was installed: 10 feet of 2" Diameter, Schedule 40, flush joint, threaded, 10-slot PVC well screen at 30 feet bgs. 2" Diameter, Schedule 40, flush joint, threaded PVC Riser installed from 0-20 feet bgs; Filter Sand placed in annulus from 18-30 feet bgs; Bentonite Seals installed from 16-18 feet bgs. Remaining annulus filled with filter sand. Well protected with a stand pipe.

See Log Key for explanation of sample description, identification procedures, and visual and odor impacts. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

REMARKS
1 - The upper 6 feet was cleared using an air knife and soil vactor truck. Soil samples were collected from the sidewalls. Therefore, blows and SPT values are not applicable for the vacuum excavated portion of the boring.
2 - The headspace of soil samples was screened for Total Volatile Organic Compounds (TVOCs) using a miniRae 3000 Photoionization Detector (PID) equipped with a 10.6 eV Lamp calibrated to a 100 ppmv isobutylene standard. ND indicates reading below the instruments detection limit of approximately 0.1 ppmv. N/A-Not Applicable, NM-Not Measured, bgs-below ground surface, WOH-Weight of Hammer
3 - Water table observed at 7 feet bgs.

See Log Key for explanation of sample description, identification procedures, and visual and odor impacts. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

REMARKS
1 - Vacuum excavate to 5' below grade before sampling. Top 5' consists of fine to medium sand and gravel (fill).

See Log Key for explanation of sample description and identification procedures. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

REMARKS
 1 - Perched water at 4'± below grade.
 2 - Refusal at 8'± below grade. Core through concrete slab from 8'± to 9.5'±.

See Log Key for explanation of sample description and identification procedures. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

REMARKS
 1 - Boring location was cleared for utilities using an airknife and soil vacuum excavation to 6.5 feet bgs on 6/3/19.
 2 - Headspace of samples was field screened with a Mini Rae 3000 PID with a 10.6 eV lamp. Results are in PPM.
 3 - Drilled through expected boulder between 8 and 9 feet bgs.
 4 - Casing refusal, obstruction encountered at 22.5 feet bgs. Drive shoe broke off casing and was abandoned at the bottom of the borehole. PRV-1 was terminated and relocated, see PRV-1A.

See Log Key for exploration of sample description and identification procedures. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

REMARKS

- 1 - Test boring PRV-1A offset 15' west from PRV-1 due to obstruction encountered at PRV-1.
- 2 - Boring location was cleared for utilities using an airknife and soil vacuum excavation to 6 feet bgs on 7/23/19.
- 3 - Headspace of samples was field screened with a Mini Rae 3000 PID with a 10.6 eV lamp. Results are in PPM.
- 4 - Timber fragments observed in drill fluid between 9 and 22 feet bgs.
- 5 - Drilled to 22 feet bgs and began sampling at PRV-1 termination depth.

See Log Key for exploration of sample description and identification procedures. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

REMARKS
 9 - Sample S-23 contained approximately 20 inches of blowing sands.
 10 - 3-inch casing driven to 149 feet bgs.

See Log Key for exploration of sample description and identification procedures. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

REMARKS

- 1 - Boring location was cleared for utilities using an airknife and soil vacuum excavation to 5.5 feet bgs on 6/3/19.
- 2 - Headspace of samples was field screened with a Mini Rae 3000 PID with a 10.6 eV lamp. Results are in PPM.
- 3 - Sample S-7 obtained using a 3-inch split spoon.
- 4 - 5-inch casing driven to 29 feet bgs. Driller proceeded with 4-inch casing.

See Log Key for exploration of sample description and identification procedures. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

REMARKS

6 - Sample S-29 taken at 118 feet bgs due to stick up height of casing resulting from telescoping casing. Driller proceeded to drive all casing to a stick-up height of 1.5 feet after taking sample S-29.

7 - Approximately 9 inches of stick-up observed on split spoon after flushing casing at 119 feet bgs due to blowing sands.

See Log Key for exploration of sample description and identification procedures. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

- REMARKS**
- 1 - Boring location was cleared for utilities using an airknife and soil vacuum excavation to 6 feet bgs on 6/3/19.
 - 2 - Headspace of samples was field screened with a Mini Rae 3000 PID with a 10.6 eV lamp. Results are in PPM.
 - 3 - Gravel observed in spoon tip of samples S-7 and S-8.
 - 4 - No recovery for sample S-11. Driller pushed a 3-inch spoon to obtain sample for 18 feet to 20 feet bgs.
 - 5 - Drilled through an expected boulder between 20.5 and 22 feet bgs.
 - 6 - Gravel observed in spoon tip of sample S-14. Driller pushed a 3-inch spoon to obtain sample for 24 feet to 26 feet bgs.

See Log Key for exploration of sample description and identification procedures. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

REMARKS

See Log Key for exploration of sample description and identification procedures. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

REMARKS
9 - Approximately 3 inches of spoon stick-up observed during sampling 124 feet to 126 feet bgs.
10 - 4-inch casing spun to 139 feet bgs.
11 - Driller began using drill mud at 144 feet bgs. Initial blow counts may not be representative of actual conditions.

See Log Key for exploration of sample description and identification procedures. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

REMARKS

- 1 - Boring location was cleared for utilities using an airknife and soil vacuum excavation to 6.5 feet bgs on 6/3/19.
- 2 - Headspace of samples was field screened with a Mini Rae 3000 PID with a 10.6 eV lamp. Results are in PPM.
- 3 - Sample S-7 contained approximately 12 inches of drill wash. Gravel observed in spoon tip.
- 4 - Drilled through expected boulder between 16 and 17 feet bgs.
- 5 - Sample S-9 contained approximately 8 inches of drill wash. Gravel observed in spoon tip.

See Log Key for exploration of sample description and identification procedures. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

REMARKS
9 - 4-inch casing driven to 99 feet bgs. Driller proceeded with 3-inch casing.
10 - Sample S-26 contained approximately 10 inches of drill wash.
11 - Approximately 4 feet of blowing sands encountered during sampling at 114 feet bgs. Driller added drill mud to the tub and flushed casing three times prior to obtaining sample S-28. Sample not indicative of actual conditions. Driller proceeded with 3-inch casing up to 119 feet bgs.

See Log Key for exploration of sample description and identification procedures. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

REMARKS
12 - Sample S-30 contained approximately 6 inches of drill was. Approximately 25 feet of blowing sands observed.
13 - Casing dropped to approximately 138 feet bgs during flushing of blowing sands within casing. Driller proceeded to obtain sample at 139 feet bgs.

See Log Key for exploration of sample description and identification procedures. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

REMARKS
1 - Boring location was cleared for utilities using an airknife and soil vacuum excavation to 5.5 feet bgs on 6/3/19.
2 - Headspace of samples was field screened with a Mini Rae 3000 PID with a 10.6 eV lamp. Results are in PPM.

See Log Key for exploration of sample description and identification procedures. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

Notes

- Well is located in the Natural Gas Regulator portion of the Property
- Well is located at the LNG Facility
- Well is located in the CNG Fueling Station portion of the Property
- Elevations are relative to City of Providence Datum
- NP - Indicates No Product observed.
- NS - Not Surveyed
- Blanks indicate no measurement collected on that particular day.
- Potentiometric elevations for wells exhibiting LNAPL include 0.85 correction factor.

Notes

- Well is located in the Natural Gas Regulator portion of the Property
- Well is located at the LNG Facility
- Well is located in the CNG Fueling Station portion of the Property
- Elevations are relative to City of Providence Datum
- NP - Indicates No Product observed.
- NS - Not Surveyed
- Blanks indicate no measurement collected on that particular day.
- Potentiometric elevations for wells exhibiting LNAPL include 0.85 correction factor.

Notes

- Well is located in the Natural Gas Regulator portion of the Property
- Well is located at the LNG Facility
- Well is located in the CNG Fueling Station portion of the Property
- Elevations are relative to City of Providence Datum
- NP - Indicates No Product observed.
- NS - Not Surveyed
- Blanks indicate no measurement collected on that particular day.
- Potentiometric elevations for wells exhibiting LNAPL include 0.85 correction factor.

Notes

- Well is located in the Natural Gas Regulator portion of the Property
- Well is located at the LNG Facility
- Well is located in the CNG Fueling Station portion of the Property
- Elevations are relative to City of Providence Datum
- NP - Indicates No Product observed.
- NS - Not Surveyed
- Blanks indicate no measurement collected on that particular day.
- Potentiometric elevations for wells exhibiting LNAPL include 0.85 correction factor.

APPENDIX AA
SITE BACKGROUND

Appendix AA

Site Background

642 Allens Avenue Former Manufactured Gas Plant (MGP)
Providence, Rhode Island

The following sections provide a summary of relevant background information for the Site. This information was obtained from earlier reports and the Site reconnaissance performed as part of investigations conducted between 2014 and 2016 and annual groundwater and site monitoring activities from 2016 through 2022. Please refer to main report attachments for figures and tables referenced herein.

SITE UTILITIES

According to observations at the Site and historical information provided by RI Energy municipal water, storm drains, sanitary sewer, natural gas and electricity service the Site. Select utilities (storm and sanitary drains) are shown on Figures 3A and 3B.

Water service at the Site is provided by the Providence Water Supply Board for fire suppression use and for potable water use. Water service lines enter the Site from Allens Avenue and from Terminal Road to service the Natural Gas Regulator Facility and from Terminal Road for the LNG Facility and Holcim Cement. Each service is protected with a hotbox at the service penetration into the Site. The separate water service lines are connected to form a loop at the Site. An extensive hydrant system is present at the Site.

Sanitary services are provided for the facility building located in the Natural Gas Regulating Facility, for the LNG facility and for the Holcim Cement Facility. NBC provides sanitary sewer service to the facility building in the Natural Gas Regulating Facility via their 102" sewer interceptor in Allens Avenue, with the final destination being the Ernest Street Wastewater Treatment Plant. As shown on Figure 3A, sanitary sewer service is conveyed from the building to MH-02, MH-01 and into the 102" interceptor. The LNG facility building and the Holcim Cement buildings are serviced via septic systems. The LNG septic system is located to the northwest of the LNG Facility Control Building and the Holcim Cement septic system is located to the south of the office trailer.

As shown on Figures 3A and 3B, an older section of line is called out as the "Old Ellis Street Sewer" which is owned by NBC. This line consists of a double 24" sewer line with a vertical separation of approximately 5 feet. The upper line is likely an overflow discharge line for the NBC stormwater tunnel system and the lower line was a condensing water intake line for the off-Site NBC wastewater treatment plant located on Ernest Street (shown on Figure 4). The upper line receives some stormwater from the off-Site NBC wastewater treatment plant property and structures within Terminal Road, and based on historical and field information, very limited (if any) stormwater from the Site. The lower line is considered to be abandoned by NBC, although it appears that few manholes on Site (MH-P and MH-U) may be tied into the line. Both lead to a discharge outfall in the Providence River, as shown on Figure 2B.

Electrical service is provided at many buildings and consists of mostly above ground lines fed from either Allens Avenue or Terminal Road.

Any utility locations shown on figures attached to this report should be considered approximate and for general information only.

ENVIRONMENTAL SETTING

The following sections provide information about the environmental setting for the Site.

Appendix AA

Site Background

642 Allens Avenue Former Manufactured Gas Plant (MGP)
Providence, Rhode Island

SITE TOPOGRAPHY

As presented on Figures 3A and 3B, the topography of the Sites slopes generally towards the Providence River, with the exceptions of the manmade retaining structures as discussed below, with an approximate maximum elevation of 20 feet NAVD 1988 along the southwestern boundary of the Site to approximately 7 feet NAVD 1988¹ along the river's edge.

As presented on Figure 3B, a large manmade earthen dike structure is present at the Site in the LNG facility. The height of the dike structure ranges from approximately 15 to 20 feet above surface grades.

As presented on Figure 3B, manmade retaining structures are present along most of the Providence River frontage. The retaining structure located to the northeast of the Site consists of a manmade steel bulkhead and the manmade structure located to the north and northwest of the Site consists of a rip rap slope. The height of the rip rap slope ranges between approximately 7 and 11 feet NAVD 1988. The rip rap slope ends at the approximate fence line between the Natural Gas Regulation Facility and the LNG facility. The remainder of the Providence River frontage is a filled slope, consisting of brick, concrete, stone and other rubble fill materials. The height of the filled slope ranges between approximately 5 and 8 feet NAVD 1988.

SITE GEOLOGY

Over one-thousand (1,000) explorations have been performed at the Site, to depths ranging from 1 to 174 feet below ground surface (bgs). These explorations are shown on Figure 5A (*Exploration Location Plan – Western Side of the Site*) and Figure 5B (*Exploration Location Plan – Eastern Side of the Site*). A review of boring and test pit logs indicates the presence of approximately up to 20 feet of urban fill underlain by organic silts / peats (variable thickness of up to 83 feet), outwash deposits (also known herein as bearing sand; at least 60 feet in thickness) and glacial till (unknown thickness to bedrock). No explorations were performed into bedrock at the Site. The depth to bedrock is expected to be over 200 feet.

The thickness of the urban fill materials was observed to be variable across the Site, ranging from approximately 8 to 20 feet. Consistent with the Site development history, the western portion of the Site generally exhibits the least significant urban fill thickness (8 to 15 feet in thickness) and the more significant urban fill thicknesses were observed on the eastern portions of the Site adjacent to the river and cove area (15 to 20 feet in thickness). In general, the urban fill material consisted of sandy materials with a heterogeneous mixture of inert materials such as ash, slag, coal, shells, brick, concrete, and wood.

The organic silt/peat is not continuous across the Site and generally is present in greatest thicknesses close to the Providence River (up to 83 feet). Based on a comparison of the depths of the sediments within the cove area to the depth of the organic silt layer in the upland portions of the Site, this unit is likely associated with the original surface of the river prior to the historical filling.

The outwash sand layer generally consists of relatively permeable sorted sands with varying amounts of gravel and silt that vary in thickness but were observed in areas up to approximately 60 feet in thickness. The outwash sands were observed to be continuous across the Site and medium dense to very dense in nature.

The glacial till layer generally consisted of a dense heterogenous unsorted mixture of sand, gravel, silt and clay, with cobbles and boulders. Glacial till is typically found immediately above bedrock. The majority of glacial till encountered at the Site was observed to be very dense.

¹ The North American Vertical Datum of 1988 (NAVD 88) is the vertical control datum of orthometric height established for vertical control surveying in the United States of America based upon the General Adjustment of the North American Datum of 1988. NAVD 1988 does not correlate to mean sea level (MSL).

Appendix AA

Site Background

642 Allens Avenue Former Manufactured Gas Plant (MGP)

Providence, Rhode Island

SURFACE WATER AND DRAINAGE

The Site is situated on the Providence River and a portion of the Site is located within the 100-year floodplain of the river. The Providence River is tidally influenced and discharges to the Atlantic Ocean via Narragansett Bay. The Providence River has been designated by the Coastal Resource Management Council (CRMC) as Type 6 waters, industrial waterfronts and commercial navigation channels. It is classified as SB1{a} waters by RIDEM. The SB1 portion of the classification is assigned to saline waters designated for primary and secondary contact recreational activities and wildlife habitat; suitable for aquacultural uses, navigation and industrial cooling; and good aesthetic value. The designation assumes that primary contact recreational activities may be impacted due to pathogens from approved wastewater discharges, and the “{a}” indicates that it is a “partial use designation due to impacts from Combined Sewer Overflows (CSOs).”

The Providence River is currently listed by the RIDEM Office of Water Resources on the *State of Rhode Island 2022 303(d) List of Impaired Waters*, dated December 2021. The 2022 303(d) list identifies water bodies within the state, which may not currently meet Rhode Island Water Quality Standards and for which a Total Maximum Daily Load (TMDL) may be needed. TMDLs are water quality restoration plans that identify water quality goals, necessary pollutant reductions, sources, and implementation plans to achieve the required reductions. RIDEM identifies the segment of the Providence River adjacent to the Site as Water Body ID RI0007020E-01B and lists the impairments as low dissolved oxygen, nutrients, and pathogens.

The Site contains grass-covered areas, paved areas, gravel covered areas, vacant areas, natural gas utility infrastructure, several occupied buildings and several vacant buildings. Based on review of information presented in the Environmental Resource map maintained by RIDEM (<http://www.dem.ri.gov/maps/>), the Site is located in the Seekonk – Providence River Drainage Basin. Stormwater at the Site is managed by separate on-Site drainage systems. As shown on Figure 3A, stormwater from the natural gas facility building parking lot is conveyed to the Ernest Street Wastewater Treatment Plan via MH-01 to 102” sewer interceptor. Roof runoff from the natural gas facility building (shown on Figure 3A) is conveyed to the 16” stormwater line in Allens Avenue, with a final outfall location in the Providence River located on A.P. 55 Lot 18 (owned by Motiva Enterprises). Stormwater from the remainder of the Site either infiltrates through Site soils² or discharges through an on-Site stormwater drainage system (with a final destination through an oil/water separator into the Providence River), as shown on Figures 3A and 3B. Several sumps located at the LNG facility act as stormwater collection points with discharge via a force main into CB#43, with a final destination of the oil/water separator and into the Providence River. RCA noted in their 1994 *Site Characterization Report*, that in the early 1970s, in connection with the construction of the LNG facility, PGC excavated a perimeter trench along the eastern and southeastern margins of the Natural Gas Regulation Facility. Drainage lines encountered during trenching were severed and capped, and the trench was then backfilled.

SHEEN OBSERVATIONS

Between January 2012 and December 2022 the shoreline adjacent to the Site was inspected for the presence of sheens in the Providence River on at least a monthly basis. During the Fields Point Liquefaction Project (FPLP) (approximately January 2019 to July 2022) the shoreline was inspected for sheens on a daily basis. Portions of the Site’s shoreline are surrounded by both hard boom and absorbent sausage boom to contain any observed sheen. Boom has been maintained in this cove since at least 2002. The current boom configuration is illustrated on Figure 3B and Figure 4. Sheen observations have been limited to the following two general shoreline areas: 1) the shoreline between the Former Propane House and CHES RW-5; 2) the outfall at the intersection of A.P. 55 Lot 196 (owned by Motiva) and A.P. 56 Lot 5 (owned by RI Energy). Sheens have not been observed at the outfall proximate to RCA-3. More significant sheens have generally been observed at mid- or low-tide only and generally

² As noted below, TNEC has performed two projects utilizing STRAPs which included the installation of stormwater controls for each project.

Appendix AA

Site Background

642 Allens Avenue Former Manufactured Gas Plant (MGP)
Providence, Rhode Island

consisted of bright spots and bands. Sheens observed at high tide were generally less significant and observed intermittently. The sections of the absorbent sausage boom have been repaired or replaced intermittently during this time period. Sheen observations during the January 2012 and December 2022 time period are summarized in Table 12.

Groundwater

Based on review of information presented in the Environmental Resource map maintained by RIDEM (<http://www.dem.ri.gov/maps/>), groundwater in the area of the Site is classified as "GB," which indicates that groundwater may not be suitable for public or private drinking water use without treatment due to known or presumed degradation. Based on surrounding topography, regional groundwater at the Site is expected to flow towards the Providence River and neighboring cove.

Site groundwater elevations are tidally influenced and have been observed to fluctuate approximately 3 feet between mean low and high water. Groundwater was encountered in many of the explorations at the Site at depths ranging from approximately 3 to 13 feet bgs (elevation 7 to 1 feet NAVD 88), with shallower groundwater elevations encountered close to the Providence River at the LNG Facility (RCA-6 and RCA-36). Shallower groundwater was also encountered proximate to the northern Site boundary in the Natural Gas Regulation Facility (VHB-1, VHB-3, GZ-305S, GZ-306S, GZ-307S and GZ-308S). Groundwater in this area is likely influenced by utility corridors. As presented on Figure 6B, based on measurements collected in May 2016, shallow groundwater beneath the Site flows from west to east towards the Providence River. These observations are consistent with comprehensive groundwater elevations collected on an annual basis.

Several monitoring well couplets were installed at the Site (RCA-12R and GZ-301D, GZ-302S and GZ-302D, GZ-303S and GZ-303D, RCA-12R and GZ-304D, VHB-1 and GZ-309D, VHB-10 and GZ-320D, VHB-3 and GZ-311D, GZ-312S and GZ-312D, RCA-3 and GZ-313D, VHB-21 and GZ-318D, VHB-20 and GZ-319D, GZ-314S and GZ-314D and RCA-5 and GZ-315D). The data generally indicates that groundwater flow at the Site has a generally intermittent (upward and downward) component of flow, which indicates that the wells proximate to the Providence River are likely at least slightly tidally influenced.

FLOOD PLAIN

Based on Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (map number 44007C0317J, dated September 18, 2013) approximately half of the Site appears to be inside the 100-year flood plain associated with the Providence River. Based on review of the FEMA Map, portions of the Site closest to the Providence River are characterized as Zone AE, with a flood elevation of 12 feet NAVD 1988. Most of the remainder of the Site is located in Zone X. Zone AE are areas that have a 1% probability of flooding every year (also known as the "100-year floodplain"), and where predicted flood water elevations above mean sea level have been established. Properties in Zone AE are considered to be at high risk of flooding under the National Flood Insurance Program (NFIP). Zone X is defined as flood zones with 0.2% chance of annual flooding.

OTHER ENVIRONMENTALLY SENSITIVE AREAS

Based on review of information presented in the Environmental Resource map maintained by RIDEM (<http://www.dem.ri.gov/maps/>), the Site lies within the Seekonk – Providence River Drainage Basin. The Site is located with a RIDEM-designated groundwater reservoir. According to the RIDEM Groundwater Quality Rules dated June 2010, a RIDEM-designated groundwater reservoir means "those stratified drift deposits having a saturated thickness greater than or equal to 40 feet and a transmissivity greater than or equal to 4000 feet squared per day which have been designated by the Director to be potentially significant sources of water". The Site is not located within a sole source aquifer, a groundwater recharge zone or a wellhead protection area. The Site is not located within 1 mile of a wellhead protection area. The Site is located at least 1.8 miles from an area with a GA groundwater use designation.

Appendix AA

Site Background

642 Allens Avenue Former Manufactured Gas Plant (MGP)
Providence, Rhode Island

HISTORICAL USE INFORMATION

Former Site operations represent the primary sources of observed impacts. As indicated previously, these operations have included the Former MGP, Former liquid petroleum gas (LPG) / propane gas storage and distribution, and Former petroleum storage and distribution. A brief description of each of the operations is described in the sections below. Figures 5A and 5B present a compilation of historical features and structures associated with past Site operations.

RCA on behalf of the PGC conducted a comprehensive characterization of the Site between 1994 and 1995 which was documented in the July 1994 *Site Characterization Report* and February 1995 *Summary Report – Phase 1A Field Investigations*. The scope of work implemented during this Site characterization entailed Site inspections, historical research, environmental evaluations, regulatory file reviews, local reconnaissance, and interviews with PGC personnel (Site operators at the time of the work). RCA summarized the Site history, probable constituents of concern based on Site historical operations, current operations, and the results of the Site inspections. For more detailed information about the history of the Site, please refer to these documents.

MGP OPERATIONS

The PGC operated a coal gasification plant from 1910 to 1953 on the Site. Coal carbonization consisted of heating coal in a sealed chamber with destructive distillation of gas from the coal, and the formation of coke. Vertical retorts were used for the coal carbonization from 1910 to 1919; after 1919, gas ovens were used until the plant was abandoned in 1953. The gases were collected from the carbonization apparatus and then cleaned and distributed. The non-volatile residue, coke, was sold or reused. The other by-products, such as tar, ammonia, cyanogen, naphthalene, light oils, hydrogen sulfide, and spent oxides, were removed during the process of gas condensing and purifying in the Former Condenser House (Former Compressor Building No. 1) and the Former Coal Gas Purifier House (present Compressor Building No. 2). Coal gasification operations were generally conducted proximate to the current LNG facility (Figure 5B), with regulating and distribution of the gas closer to the current Natural Gas Regulating Facility (Figure 5A).

The PGC operated a carbureted blue gas (or carbureted water gas (CWG)) operation beginning in 1917. In 1952, this portion of the facility was converted to a high-BTU oil gas plant. The water gas process used coke (or coal), steam, and various oil products to produce a combustible product gas. Steam was fed through a bed of incandescent coke, producing a gas containing hydrogen and carbon monoxide (blue gas). A carburetor added oil vapors, which produced oil gas, and a superheater fixed the mixture of blue gas and oil gas to create carbureted water gas. After carburetion, the gases were collected, cleaned, and mixed with coal gas for final distribution. The principal by-products of this process were tars, spent oxides, ash/clinker material, and a tar and water emulsion. Carbureted water gasification operations were generally conducted proximate to the current LNG facility (Figure 5B), with regulating and distribution of the gas closer to the current Natural Gas Regulating Facility (Figure 5A).

The PGC operated a producer gas operation beginning in 1922, which ceased before 1953. Producer gas was used to heat the coke ovens and to dilute other gases. This process entailed aeration of incandescent coke to produce carbon monoxide and nitrogen. Steam was admitted with the air to control ash formation. Producer gas was cleaned and cooled before it was pumped either to the coke ovens or to a relief gas holder. The by-products from this process were principally the same as those created by coal or water gas manufacture. Producer gasification operations were generally conducted proximate to the current LNG facility (more producer gas operations located in the southern portion of this area – Figure 5B), with regulating and distribution of the gas closer to the current Natural Gas Regulating Facility (Figure 5A).

The PGC operated a high-BTU oil gas operation beginning in 1952 when the carbureted water gas plant was converted into the oil gas plant. Based on historical reports prepared by RCA referenced above, it appears that the operation ceased before 1970. The oil gas process was based on the gasification of oils and steam by passing them through a chamber of heated checker bricks.

Appendix AA

Site Background

642 Allens Avenue Former Manufactured Gas Plant (MGP)
Providence, Rhode Island

The major by-products from the oil gas process were lampblack, tar, and light oils. Oil gasification operations were generally conducted proximate to the current LNG facility (Figure 5B), with regulating and distribution of the gas closer to the current Natural Gas Regulating Facility (Figure 5A).

Coke, the principal non-volatile by-product of the coal gasification operations, was reused or sold. According to historical reports prepared by RCA referenced above, Site operations included on-Site recycling of coke as a filter medium and a process fuel. Many volatile by-products at the Site were also reused or recovered for sale. The Former B. P. Clapp Ammonia Works Building (Figure 5A) recovered ammoniacal liquor from ammonia scrubbing operations starting in 1910. During the First World War, the United States Government extracted toluol and benzol (benzene and toluene) from coal and water gas in the Former Benzol building (Figure 5A). Recovered and reprocessed materials were shipped from the Site for sale or re-use.

LIQUEFIED PETROLEUM GAS OPERATIONS / PROPANE GAS OPERATIONS

PGC operated a LPG plant beginning in 1952. According to historical reports prepared by RCA, the plant consisted of five 30,000-gallon tanks and the necessary vaporizing and mixing equipment. LPG produced off-Site was shipped to the Site in trucks or railroad cars to the Site for storage and distribution. The LPG became gas as the pressure was released, and supplemented the manufactured gas and natural gas during peak gas demands. The chief constituents of LPG are propane, propylene, butane, butylene, iso-butane, and air, mixed in any proportion. LPG operations ceased in the 1960s. Subsequently, the LPG plant was utilized by the PGC for propane gas storage and distribution to supplement manufactured gas and natural gas during peak gas demand times. Propane gas storage and distribution was phased out at the Site in late 1980s. LPG/propane operations were generally conducted proximate to the center of the Site near the Former Propane House (Figures 5A and 5B).

PETROLEUM STORAGE AND DISTRIBUTION

According to historical reports prepared by RCA, oil used in the production of manufactured gas was stored in two aboveground storage tanks located at the northeast corner of the Site (proximate to the current LNG tank – Figure 5B). PGC also constructed a 150,000-gallon oil or tar storage facility in 1953 (location unknown), bringing the total on-Site storage capacity to 2,150,000 gallons, at the time the MGP operations ceased.

Gulf Oil Corporation leased a portion of the Site during 1957 and built four aboveground storage tanks (ASTs) with an aggregate storage capacity of 420,000 gallons of kerosene on the premises (exact location of all tanks unknown, although the location of one of the tanks is shown on Figure 5B). According to historical reports prepared by RCA, the Former Gulf Oil facility was located in the northeastern portion of the Site in the area presently occupied by the LNG facility (Figure 5B).

Several additional ASTs and USTs have been utilized at the Site for petroleum products storage as presented below

STORAGE TANKS

Storage tanks that have been or are presently located at the Site include USTs, ASTs, Former tar tanks, Former ammonia tanks, Former purifier tanks and Former Gasholders. This section discusses storage vessels that contain liquids, compressed gases, or gases under low pressure. Based on review of information presented in the Environmental Resource map maintained by RIDEM (<http://www.dem.ri.gov/maps/>) and historical records provided by TNEC, there were/are several different types of storage tanks located at the Site. Several additional process tanks were remediated during remedial actions in the early 2000s as presented in Section 4.1 and Appendix F (*Summary of Remedial Action (1995 through 2002)*).

Appendix AA

Site Background

642 Allens Avenue Former Manufactured Gas Plant (MGP)
Providence, Rhode Island

USTs

Two (2) 4,000-gallon gasoline USTs installed in 1974 existed proximate to the Holder Heating Building at the Site, located along the property line running parallel to Terminal Road (Figure 5A). These USTs were registered in 1985. A remote dispenser pump was used in connection with the USTs to fuel vehicles. Remedial actions are described in Section 4.00 and Appendix F and a Certificate of Closure was issued by RIDEM on December 11, 1995.

The east end of the Compressor Building No. 2 located in the central southeastern portion of the Site (Figure 5A) contained two (2) 10,000-gallon USTs of concrete construction. Tank fills were noted on the exterior south wall of the building; vents existed on the east side. These USTs were Formerly used to store used system condensate or waste oil. The closure of these USTs was documented in in Section 4.00 and Appendix F. A Certificate of Closure was issued by RIDEM on December 12, 1995.

A 2,500-gallon diesel UST was installed under Compressor House No.2 building (Figure 5A). This tank was installed in 1984 and registered with RIDEM's Underground Storage Tank Program in 1985. Remedial actions are described in Section 4.00 and Appendix F and a Certificate of Closure was issued by RIDEM on January 12, 1999.

There are no RIDEM leaking underground storage tank (LUST) files for the Site.

ABOVEGROUND STORAGE TANKS (ASTs)

According to historical reports prepared by RCA, a 10,000-gallon, cradle-mounted, horizontal, cylindrical oil storage tank, was located near the Former Booster House in the central western portion of the Site (Figure 5A). The tank was reportedly used to store fogging oil. The tank was removed from the Site at some point between 1988 and 1997.

As noted above, PGC operated a LPG / propane gas plant at the Site. A series of LPG tank cradles occupied the central portion of the Natural Gas Regulation Facility (Figure 5A and 5B). These cradles once held horizontal pressure vessels of propane. These tanks were removed before 1993 and the cradles were removed before 2002.

A diesel-fueled emergency electrical generator is located on the second floor of the Compressor Building No.2 (Figure 5A) and is fed by a day tank and associated transfer pump located on the second floor of the building. Based on review of information presented in the Environmental Resource map maintained by RIDEM (<http://www.dem.ri.gov/maps/>) and historical records provided by TNEC, this double-wall steel tank was installed in 1980, has a capacity of 2,000 gallons and is currently in use.

The building referred to as the "Odorizer House" located in the central portion of the Site (Figure 5A) is used to store the odorant added to natural gas. At the Odorizer House, 100-gallon cylinders of methyl mercaptan are stored for use as an odorizer on the Site. Based on review of information presented in the Environmental Resource map maintained by RIDEM (<http://www.dem.ri.gov/maps/>) and historical records provided by TNEC, a 1,000-gallon steel AST is located in this building to store odorant and is currently in use.

Based on review of information presented in the Environmental Resource map maintained by RIDEM (<http://www.dem.ri.gov/maps/>) and historical records provided by TNEC, a 1,800-gallon poly tank is located in Compressor Building No. 2 (Figure 5A), is utilized to store "oil and poly-chlorinated biphenyls (PCBs) drip water" and is currently in use.

Based on review of information presented in the Environmental Resource map maintained by RIDEM (<http://www.dem.ri.gov/maps/>) and historical records provided by TNEC, three (3) 2000-gallon double-wall steel tanks (with

Appendix AA

Site Background

642 Allens Avenue Former Manufactured Gas Plant (MGP)
Providence, Rhode Island

containment) were installed in 1999 in a LNG facility building for backup generator use (Figure 5B), are utilized to store light diesel and are currently in use.

Algonquin Gas Transmission Company built a 600,000-barrel (3.37 million cubic feet (MMcf)) LNG facility in 1972. The LNG storage tank occupies the interior of a bermed portion of the LNG facility (Figure 5B). LNG is currently stored in the tank, under pressure and the Site currently operates as a LNG facility.

As presented in the 1994 *Site Characterization Report* prepared by RCA on behalf of PGC, there were several additional above ground petroleum storage tanks located at the Site:

| Location | Type of Tank | Figure Reference | Status |
|--|----------------------|------------------|--|
| Northwestern Side of the LNG dike wall | Former Oil Tanks | 5B | Currently located underneath the LNG dike wall and limited room for excavation. Excavation at the edge of the dike wall during a facility project exposed an edge of this structure. Structures believed to have been entirely above ground. Demolished at some point between 1972 and 1981. |
| Northeastern Side of the LNG dike wall | Former Kerosene Tank | 5B | Currently located underneath the LNG dike wall and LNG tank with limited room for excavation. Structure(s) believed to have been entirely above ground. Demolished at some point between 1962 and 1972. |
| Southeastern Side of the LNG dike wall | Former Gas Tank | 5B | Currently located underneath the LNG dike wall and LNG tank with limited room for excavation. Structure believed to have been entirely above ground. Demolished at some point between 1956 and 1972. |
| Near Former Compressor House No. 1 | Former Fuel Oil Tank | 5B | Structure believed to have been entirely above ground. Demolished at some point between 1956 and 1972. |

FORMER MGP RESIDUALS STORAGE TANKS

As presented in the 1994 *Site Characterization Report* prepared by RCA on behalf of PGC, there were several additional tanks that were utilized to storage residuals from the manufactured gas process:

| Location | Type of Tank | Figure Reference | Status |
|------------------------------------|-----------------------------|------------------|---|
| Oxide Box Area | Former Purifier Tanks | 5A | Former purifier tanks suspected to be demolished between 1972 and 1981. Test pits completed by VHB in 2009 (see 2009 <i>Oxide Box Waste Summary Memo – Appendix D (Summary of Completed Investigations (1994 through 2009))</i>) for more information) encountered the likely foundation remnants. |
| Near Former Compressor House No. 1 | Former Tar and Ammonia Pits | 5B | Structure excavation, cleaning and backfill in 2002. Documented in the November 2002 <i>Remedial Action Closure Report</i> (see Section 4.00 and Appendix F for more information). |
| | Former Ammonia Storage Tubs | | |

| Location | Type of Tank | Figure Reference | Status |
|---|-------------------------------|------------------|--|
| Northwestern Side of the LNG Dike | Former Above Ground Tar Tanks | 5B | Currently located underneath the LNG dike wall with limited room for excavation. Excavation at the edge of the dike wall during a facility project exposed an edge of this structure. Structure believed to have been entirely above ground. Demolished at some point between 1972 and 1981. |
| Proximate to the Former Producer Gas Plant | Former Tar Tank | 5B | Unknown. Not mentioned in the December 2002 <i>Remedial Action Closure Report</i> , however, the Former tar tank is very close to the Former tar and ammonia pits and may have been remediated at the same time (see below). Located at the edge of the LNG dike wall with very limited room for excavation. |
| | Former Tar and Ammonia Pits | 5B | Structure excavation, cleaning and backfill in 2000. Documented in the December 2002 <i>Remedial Action Closure Report</i> (see Section 4.00 and Appendix F for more information). |
| Proximate to the Providence River (southwest of the LNG Dike) | Former Open Cooling Tank | 5B | Structure excavation, cleaning and backfill in 2002. Documented in the November 2002 <i>Remedial Action Closure Report</i> (see Section 4.00 and Appendix F for more information). |
| | Former Tar Tank | | |
| | Former Open Separating Tanks | | |
| | Former Filters | | |

FORMER GASHOLDERS

Three (3) Gasholders were present at the Site. Former Gasholder No. 18, located in the southwestern corner of the Site along Terminal Road (Figure 5A), was built in 1911 and measured approximately 220 feet in diameter and 28 feet tall in the “closed” position (6 MMcf). Former Gasholder No. 21, located immediately to the east of Former Gasholder No. 18, was built in 1947 and measured approximately 163 feet in diameter and 40 feet tall in the “closed” position (3 MMcf). When MGP operations ceased at the Site, both Gasholders were utilized for storage of natural gas until the 1980s. Both Gasholders were decommissioned and demolished in 2010. The decommissioning and demolition was documented in the July 2010 *Construction Completion Report for Demolition and Decommissioning of Gasholders Nos. 18 and 21* prepared by Brown and Caldwell on behalf of TNEC, as described in Section 4.00. As shown on Figure 7 (*Completed Remedial Action (1995-2017)*) and Figure 8 (*Existing Engineered Controls*), the Holder 18/21 area was capped in 2016. Remedial actions in this area are described **Error! Reference source not found.** in Sections 4.1 and 4.4.

The other Former Gasholder was located in the LNG portion of the property adjacent to the cove/Providence River and was an above grade Gasholder (called out as “Former Relief Holder No. 16” on Figure 5B). Based on information presented in the December 1998 *RAWP* prepared by ESS on behalf of PGC, the relief Gasholder structure itself was believed to be entirely above grade (0.5 MMcf capacity) and was supported by a timber pile relieving platform. The relieving platform was likely designed to mitigate settlement of the underlying compressible soils and to alleviate tidal influences. The above ground portion of the relief Gasholder was demolished at some point between 1972 and 1981. Based on explorations conducted by others, the below ground foundation portion of the relief Gasholder is intact and is located approximately 12 inches bgs.

REGULATORY HISTORY

The Site has been subject to extensive investigation and remedial efforts. A summary of the regulatory history of the Site remediation effort is presented below.

LETTER OF RESPONSIBILITY

RIDEM issued a Letter of Responsibility (LOR) on February 13th, 1998 to PGC based on results presented in the February 1995 *Summary Report – Phase 1A Field Investigations* prepared by RCA on behalf of the PGC and the *June 1996 Summary Report – Phase 1B Field Investigations* prepared by RCA on behalf of the PGC. The Site was listed as State Site #98-004 (RIDEM File No. SR-28-1152) following the issuance of the LOR.

REMEDIAL ACTION WORK PLANS

Remedial activities were proposed by PGC and presented in a report entitled *Remedial Action Work Plan, Providence Gas Company, Providence, RI*, which was revised and amended multiple times, with the final version dated December 4, 1998. The *RAWP* was the result of investigation work conducted by RCA and others prior to 1996. The *RAWP* concentrated on the remediation of Former MGP structures and soil source areas that were discovered during the pre-1996 investigations and concentrated most efforts to the LNG portion of the Site. As further detailed in the 1998 *RAWP*, the remedial efforts generally consisted of the following:

- Established Remedial Objectives for surface and subsurface soils at the Site. Surface soil remedial objectives are generally consistent with soils meeting the RIDEM I/C-DEC.
- Dewatering of specific subsurface MGP structures prior to removal of contents with water processing through an on-Site wastewater treatment system.
- Excavation and blending of subsurface MGP structure contents and impacted Site soil for off-Site co-burning at a coal fired utility boiler.
- Installation of the containment boom in the cove area at the Site.
- Backfilling of subsurface structures and excavated areas with fill or construction debris meeting the established Remedial Objectives obtained from either off-Site or on-Site sources.
- Removal of LNAPL from the groundwater surface encountered during excavation, with transfer of the LNAPL to the on-Site wastewater treatment system.
- Removal of underground product piping encountered during excavation activities.

RIDEM had issued a *Remedial Decision Letter* on October 29, 1998 which agreed to the proposed remedy (as presented to RIDEM in a prior version of the December 4, 1998 *RAWP*) but noted several other permitting agencies that would be required to approve before RIDEM would issue a *Temporary Remedial Action Permit (TRAP)*.

RIDEM approved the December 4, 1998 *RAWP* on June 1, 1999 with a *TRAP*. The *TRAP* noted that RIDEM did not feel Site investigation activities were complete but that the planned limited remedial action was acceptable.

VHB modified the *RAWP* on behalf of the NEGC in November 2001 (known herein as the *MRAWP*) to reflect additional proposed remedial work:

- Additional source removal was proposed from Former MGP structures. The *MRAWP* proposed to remove this source material, dispose of them off-property and backfill the areas with suitable fill meeting the approved Remedial Objectives.

Appendix AA

Site Background

642 Allens Avenue Former Manufactured Gas Plant (MGP)

Providence, Rhode Island

- Additional soil and LNAPL removal that was suspected to be associated with MGP wastes was proposed. The *MRAWP* proposed to remove these soils, dispose them off-property and backfill the areas with suitable fill.
- An active seep area was detected proximate to the Providence River in the tidal inlet that bounds the property to the north. The *MRAWP* proposed to mitigate the seep by removing active gas piping and then removing MGP-impacted materials, piping and MGP remnants structures from the shoreline. The *MRAWP* noted that after those mitigate efforts were complete, the appropriateness of installing a flow retarding structures, such as a slurry wall was planned to be evaluated and possibly installed before closing the excavated areas.

RIDEM approved the November 2001 *MRAWP* on April 17, 2002 with a *TRAP*. A RIDEM order in the *TRAP* indicated that portions of the Site that were not included in the LNG facility were not adequately characterized and therefore RIDEM required the submittal of an *SIR* incorporating the remainder of the Site within 90 days of completing the *MRAWP* activities. VHB submitted a *SIR* to RIDEM in April 2003 (see Section 3.00 and Appendix D for more information).
