

# Next Steps for the Park Parcel Cleanup

Communicating with the public will be a priority for Textron as progress is being made with Park Parcel cleanup and future site activities.

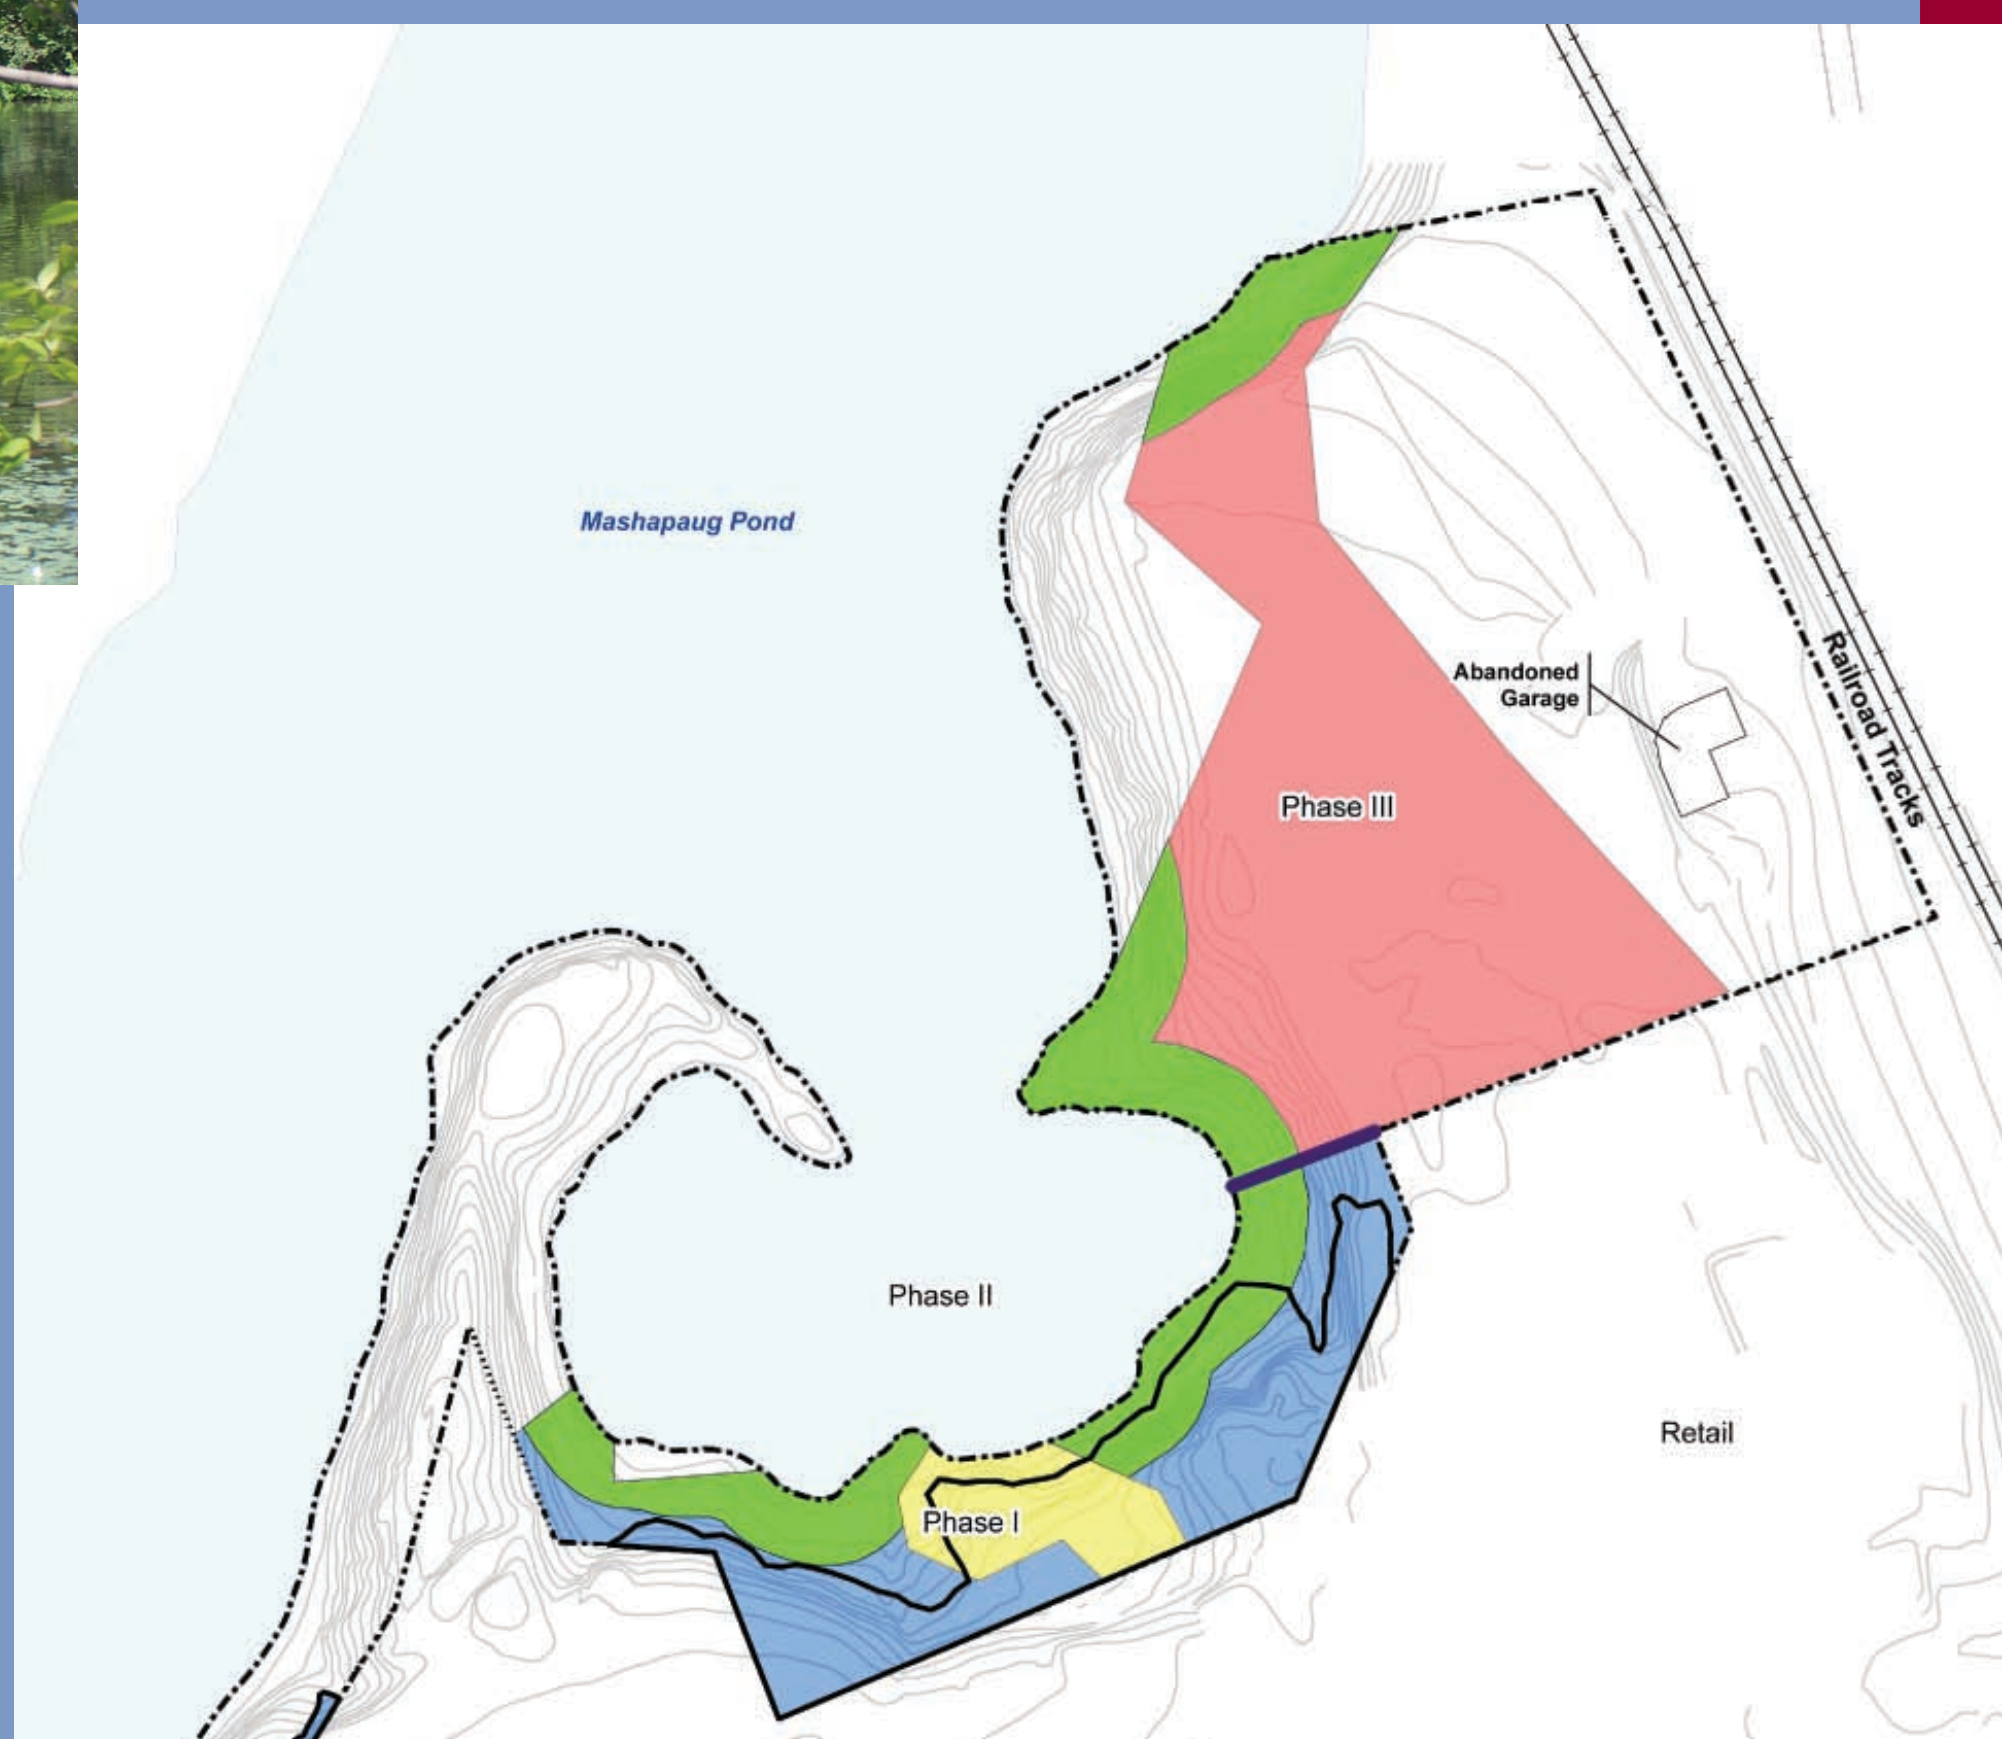

## Phase Two

### Summer 2008 Park Parcel Cleanup

Textron is analyzing sediment and surface water samples collected from the Cove. Based on results, Textron plans to conduct necessary cleanup activities in the Cove in 2008.

A barge was used to collect sediment samples in the deep water of the Cove.

Phase II will occur in the Cove and Phase III cleanup will occur in the upland area (shown in pink) near the Cove and behind the former Stop and Shop building.

## Phase Three

### Fall 2008 Park Parcel Cleanup

#### Soil Capping

With RIDEM approval, Textron intends to use soil capping in Phase III as part of the plan to achieve the recreational use standard in the Park Parcel.

A woven plastic mat called a geo-textile fabric liner will be used (in a similar method as shown here) in the upland area to further isolate contaminated soils. A foot of clean soil and grass seed will cover the geofabric.

**Once  
Phase III is  
complete,  
the Park  
Parcel  
will be  
safe for  
recreational  
use.**

## For More Information

Attending monthly RIDEM public meetings is one of the ways Textron is looking to communicate with the public about what we are doing.

**If you have questions about the project, contact**

**Greg Simpson**  
Textron's Site Remediation Manager

**Telephone 401-457-2635**  
**Email [gsimpson@textron.com](mailto:gsimpson@textron.com)**

**For information on the cleanup or redevelopment activities, contact**

**Joseph T. Martella II**  
Senior Engineer, Rhode Island Department of Environmental Management (RIDEM)

**Telephone 401-222-2797, ext. 7109**
