SITE ACTIVITIES TO BE PERFORMED

- Complete site observation walk.

A complete report describing the recent soil gas sampling and analyses is currently being prepared and will be submitted to RIDEM the week of September 30, 2013.

Minor excavation (associated with utility conduit) is planned for the week of October 13, 2013. The color-coded alert system indicating when excavation is active (yellow sheet) and not active (blue sheet) will be updated on the bulletin boards and National Grid Tidewater website (www.tidewatersite.com) prior to the start of the minor excavation work.

GZA will continue to oversee soil management and conduct air monitoring during these earth disturbing activities. Air monitoring will be performed consistent with the summary memorandum which was submitted to RIDEM on September 28, 2012. The remainder of the work associated with the electrical substation upgrade project will consist of aboveground work within the substation and buildings. It is currently anticipated that the aboveground work associated with the substation upgrades will continue until the end of 2013.

Please contact me at 401-421-4140 Ext. 2719 if you have any questions or comments.
