Re: Site Investigation Report Addendum
Focused Soil and Groundwater Sampling and Analysis
Former Tidewater Facility
Pawtucket, Rhode Island

Dear Mr. Martella:

On behalf of the Narragansett Electric Company d/b/a National Grid (National Grid), GZA GeoEnvironmental, Inc. (GZA) is pleased to present to the Rhode Island Department of Environmental Management (RIDEM) the attached *Site Investigation Report Addendum (SIR Addendum)* for the Former Tidewater Manufactured Gas Plant (MGP) and Power Plant Site located in Pawtucket, Rhode Island (the Site).

The activities described in the attached were performed in general accordance with the RIDEM-approved, February 2014 *Supplemental Site Investigation Work Plan* (SSIWP) prepared by GZA. This *SIR Addendum* presents the results of focused soil and groundwater gas sampling and analyses activities performed to further assess the localized detection of benzene in soil gas at SG-105S within the natural gas regulator station fence line.

We look forward to continue to work cooperatively with RIDEM to advance this Site to compliance with the applicable regulations. Should you have any questions or comments regarding the information presented herein, please do not hesitate to contact the undersigned or Michele Leone from National Grid at (781) 907-3651.

Very truly yours,

GZA GEOENVIRONMENTAL, INC.

1.00 INTRODUCTION

On behalf of The Narragansett Electric Company, d/b/a National Grid (National Grid), GZA GeoEnvironmental Inc. (GZA) has prepared this *Site Investigation Report* (SIR) *Addendum* describing investigation activities that were performed at the former Tidewater facility located at the terminus of Tidewater and Merry Streets in Pawtucket, Rhode Island (refer to Figure 1 for the Site *Locus Plan*). This property is herein referred to as the Site.

The investigation described herein was performed consistent with the February 7, 2014 *Supplemental Site Investigation Work Plan* (SSIWP) and February 28, 2014 Addendum Letter to the SSIWP, which were prepared by GZA on behalf of National Grid and submitted to the Rhode Island Department of Environmental Management (RIDEM). As described in the SSIWP and addendum, these investigations were designed to address a data gap identified during the soil gas testing performed at the Site between July and August 2013. These investigations involved focused soil and groundwater testing within and adjacent to the active natural gas regulator station located on the western portion of the Site.

The Site is located on the west side of the Seekonk River and is bound to the west by residential properties, to the south and southwest by the Francis J. Varieur School and Max Read Athletic Field, and to the north by undeveloped property owned by the City of Pawtucket. It encompasses approximately 23 acres and was the location of the former Tidewater Manufactured Gas Plant (MGP) and the Pawtucket No. 1 Power Station. The Site is currently largely vacant with the exception of an active natural gas regulator station, an active switching station and electric substation, and two transmission towers owned and operated by National Grid. A *Site Investigation Data Report* (SIDR) was submitted to RIDEM in January of 2011. This SIDR was prepared consistent with applicable sections of Rule 7.00 of the RIDEM Rules and Regulations for the Investigation and Remediation of Hazardous Material Releases (Remediation Regulations-DEM-DSR-01-93). A *Remedial Alternative Evaluation* report was submitted to RIDEM on July 29, 2011. This evaluation, combined with the January 2011 SIDR fulfilled the requirements of Sections 7.03, 7.04, and 7.05 of the Remediation Regulations for a *Site Investigation Report* (SIR). This report serves as an addendum to the SIR.

This report and its conclusions are subject to the Limitations presented in Appendix A and are subject to modification if subsequent information is developed by GZA or any other party.

1.10 PROJECT OBJECTIVES

In response to public comments regarding the potential for vapor migration from the Tidewater Site towards neighboring properties, RIDEM requested that National Grid evaluate the quality of soil gas at the Tidewater Site. Between July and August 2013, GZA completed soil gas sampling and testing at the Site consistent with a May 2013 SSIWP which National Grid submitted to RIDEM. The results of this soil gas sampling and

testing were submitted to RIDEM in an October 2013 *Site Investigation Report* (SIR) *Addendum*. Soil gas samples were collected from both interior and perimeter locations to assess the quality of soil gas at the Tidewater Site and near neighboring properties. The results indicated that potential migration of impacted soil gas from the Tidewater Site does not pose a risk to the neighboring properties and structures. The results of the soil gas investigation program do not alter the conclusions presented in the SIR prepared for the Site.

As described in the October 2013 *SIR Addendum*, benzene was detected in the shallow soil gas sample identified as SG-105S, collected at a depth of 5 feet below ground surface (bgs). As shown on Figure 2, SG-105 is located proximate to the perimeter of the Site, near the natural gas regulator station and is located at least 120 feet from an occupied building. At this location, benzene was detected in shallow soil gas at a concentration of 1,700 µg/m³ during our July 2013 sampling event. This soil gas concentration is below the Connecticut Department of Energy and Environmental Protection (CTDEEP) residential criteria and above both the New Jersey Department of Environmental Protection (NJDEP) residential and industrial/commercial screening levels and the Massachusetts Department of Environmental Protection (MADEP) residential and industrial/commercial screening levels¹. The concentration of benzene detected in the deeper (collected at 11 feet bgs) soil gas sample from SG-105D were well below the above-described regulatory screening levels and criteria. To confirm that soil gas was not migrating from SG-105S toward the neighboring buildings, an additional probe (SG-114S) was installed as part of the August 2013 soil gas investigation. As shown on Figure 2, SG-114S is located approximately 75 feet to the south of SG-105S and at least 70 feet from an occupied building. The concentrations detected in the soil gas sample collected from 5 feet bgs at location SG-114S were well below regulatory screening levels and criteria from nearby states suggesting the detection of benzene at SG-105S was likely from a localized source.

Additional soil and groundwater sampling was recommended in our October 2013 *SIR Addendum* to further assess the localized detection of benzene in soil gas at SG-105S within the natural gas regulator station fence line. In February 2014, National Grid submitted a SSIWP describing the proposed soil and groundwater investigation plan to RIDEM. As described further herein, this investigation consisted of the performance of four (4) test borings (TB-400 to TB-403), two (2) of which were completed as groundwater monitoring wells (TB-400/MW-400 and TB-401/MW-401) proximate to soil gas location SG-105S, as well as the collection of soil and groundwater samples for laboratory analysis.

For further details regarding existing and historic Site conditions, including Site plans, previous Site investigations, hydrogeologic setting and observed impacts, please refer to the January 2011 SIDR and the October 2013 *SIR Addendum* which are available on the Tidewater website (www.tidewatersite.com).

¹ RIDEM has not established soil gas screening levels or criteria to evaluate the potential for vapor intrusion. Soil gas results were compared to criteria and/or screening values for nearby states, specifically to soil gas criteria published by the CTDEEP and to soil gas screening levels published by the NJDEP and the MADEP. For further details, please refer to GZA's October 2013 Soil Gas *SIR Addendum*.

1.20 SCOPE OF WORK

The following summarizes the scope of these supplemental investigations which were performed consistent with our February 2014 SSIWP Addendum. Any deviations from the work plan were relatively minor and did not affect the generated data or the conclusions of this report.

- Performance of four (4) soil borings proximate to the natural gas regulator station to further characterize the nature and extent of benzene and other volatile organic compounds (VOCs). Soil samples were collected continuously during the performance of the borings. The samples were collected for soil classification, observation for the presence of environmental impacts, and field-screening. Eight (8) soil samples were submitted for analytical testing of VOCs via EPA Method 8260B.
- Installation of two (2) groundwater monitoring wells.
- Collection of groundwater samples from the two (2) newly installed monitoring wells. Prior to sampling, the wells were developed and evaluated for the presence of light non-aqueous phase liquids (LNAPL) and dense non-aqueous phase liquids (DNAPL) using an electronic oil/water interface probe. Groundwater samples were analyzed for VOCs using EPA Method 8260B.
- Preparation of this *SIR Addendum*.

1.30 REPORT ORGANIZATION

This *SIR Addendum* is organized as follows:

- Section 1.00 provides an introduction to the project and presents the primary objective;
- Section 2.00 describes the supplemental investigations performed;
- Section 3.00 provides an evaluation of conditions encountered during the performance of these supplemental investigations; and
- Section 4.00 presents a summary of the investigation results along with our conclusions and recommendations.

2.00 SUPPLEMENTAL SITE INVESTIGATION PROGRAM

This investigation program was performed consistent with our February 2014 SSIWP and/or information subsequently requested by RIDEM. The following sections describe the investigation activities performed.

2.10 ABUTTER NOTIFICATION

In accordance with Section 7.07A of the Remediation Regulations and the October 2013 Public Involvement Plan (PIP) for the Tidewater Site, GZA identified and subsequently provided notifications to abutting property owners and tenants, including those additional interested parties on the Tidewater mailing list, to inform them of the planned environmental investigations. The abutter notifications were documented in a letter dated February 21, 2014, which was subsequently provided to RIDEM. This notification was also sent via email to those parties who elected to sign up for the Tidewater email list. A copy of the notification is provided in Appendix B.

2.20 SOIL AND GROUNDWATER EXPLORATION PROGRAM

The following sections describe the exploration and analytical testing program completed between April 3, 2014 and April 17, 2014. This field program involved the performance of four (4) soil borings (TB-400, TB-401, TB-402 and TB-403), with two (2) of the borings completed as groundwater monitoring wells (TB-400/MW-400 and TB-401/MW-401) to evaluate groundwater quality and the potential presence of non-aqueous phase liquid (NAPL). Exploration locations are shown on Figure 2. The boring locations were selected to evaluate the potential presence of soil and/or groundwater impacts associated with the detection of benzene in soil gas at SG-105S. The groundwater monitoring well locations were selected specifically such that one was located hydraulically upgradient (MW-400) and downgradient (MW-401) from SG-105(S).

Soil and groundwater samples were collected and analyzed during the investigation program in accordance with the February 2014 SSIWP. In addition, GZA performed real-time air monitoring during the utility clearance and soil boring installation work, consistent with the February 2014 SSIWP and February 2014 Addendum Letter to RIDEM.

2.20.1 Soil Borings and Field Screening

Between April 3, 2014 and April 4, 2014, GZA observed the installation of four (4) soil test borings by New England Geotech, LLC of Jamestown, RI. All of the borings were advanced utilizing a Geoprobe™ rig. The borings were extended to depths ranging from 20 to 25 feet bgs. Soil samples were collected continuously during the advancement of the borings at approximately 2-foot intervals with a 2-inch acetate sampler for the primary purposes of visual and olfactory classifications. Each boring location was initially advanced using vacuum excavation to depths of approximately 6 feet for utility clearance purposes. Utility clearance was performed by Clean Harbors Environmental Services, Inc. (CHES). During the initial clearance work, soil samples were collected from the sidewall of the boring at approximately 2-foot intervals. Groundwater monitoring wells were installed in two (2) of the four (4) borings as described below.

A GZA field engineer was present during all exploration activities to coordinate and document subsurface conditions, classify soils, prepare boring logs, field-screen soil samples, collect/prepare samples for laboratory testing, and perform real-time air monitoring.

GZA personnel photo-documented the soil within each split spoon sampler during the advancement of each boring. Copies of the photos have not been included as an appendix to this report, but can be provided upon request. Please refer to the boring logs attached in Appendix C for a description of subsurface conditions and monitoring well construction details.

The soil from each sampling interval was placed in a clean, 8-ounce glass jar. Soil samples for VOC analysis were placed in 40 milliliter (mL), methanol-preserved glass vials with septa caps. All recovered soil samples were stored in a cooler with ice and transported under chain-of-custody protocols to ESS Laboratory in Cranston, RI. Soil samples not selected for laboratory analysis were stored in a freezer by ESS Laboratory for potential subsequent analysis and/or disposal.

All soil samples recovered during the program were screened in the field for Total Volatile Organic Compounds (TVOCs) with a MiniRAE Photoionization Detector (PID) equipped with a 10.6 eV lamp and jar-head space technique prior to placing on ice. The MiniRAE PID measures relative levels of TVOCs referenced to a isobutylene-in-air-standard. Although the PID screening cannot be directly used to quantify VOC concentrations or to identify individual compounds, the results can serve as a relative indicator of VOC levels. The TVOC screening results are provided on the boring logs in Appendix C.

Upon achieving the desired depth, each boring (not slated for monitoring well installation) was backfilled with clean drill cuttings and/or clean off-Site filter sand to a depth approximately coincident with the existing ground surface.

Drilling equipment was steam cleaned between each test boring within a dedicated decontamination area located between the Former Machine Shop and the remnants of the Purifier House on the Former Gas Plant Area (FGPA) portion of the Site. All soil cuttings generated during drilling were containerized in a 55-gallon drum for disposal. Wash water (*i.e.*, decontamination water) and spent personal protective equipment (PPE) generated during the drilling program were placed into 55-gallon drums for subsequent off-Site disposal. The resulting drums were labeled and temporarily stored on-Site in a fenced enclosure located along the fence line between the FGPA and Former Power Plant Area (FPPA) adjacent to the former Purifier House and Meter Room. All investigation derived wastes (IDWs) were transported off-Site by CHES. Wash water, PPE and soil drill cutting drums were transported by CHES on May 15, 2014 to their facility in Braintree, Massachusetts. Copies of shipping records for the IDWs are included in Appendix D.

2.20.2 Monitoring Well Installation

Two (2) new monitoring wells were installed during the investigation program to further evaluate groundwater quality and the potential presence of NAPL. The monitoring wells were constructed of 2-inch Schedule 40 PVC in accordance with the standards specified in Appendix 1 of the RIDEM Groundwater Quality Regulations. Both of the wells were constructed with screens set to span the natural water table encountered during

drilling (ranging from approximately 12 to 16 feet below grade). For both wells, a sand filter pack was installed in the annular space around the well screen and extended approximately 1 foot above the well screen. The screen length of each well was approximately 10 feet. An approximate 1-foot (minimum) bentonite seal was placed above the filter pack. The remaining borehole above the bentonite was backfilled with clean native drill cuttings (when encountered) or clean off-Site filter sand. No impacted soil was used as backfill to construct the monitoring wells. A concrete surficial seal with an flush-mounted roadbox was installed to protect the wells. For additional details, please refer to the boring/well installation logs in Appendix C.

Upon completion of the monitoring well installations, the wells were allowed to stabilize over a 5 day period prior to well development. Well development activities were performed on April 9, 2014 to remove sediment build-up. This process was performed by surging a bailer repeatedly over the length of the well screen followed by the removal of at least ten (10) standing water column volumes or until the water quality was observed to be non-turbid. Groundwater was removed via a combination of bailing and pumping techniques during development.

All development water was collected in 55-gallon drums for subsequent off-Site disposal. The drummed purge water was transported off-Site on May 15, 2014 for appropriate disposal by CHES at their Braintree, Massachusetts facility. Copies of shipping records are included in Appendix D.

2.20.3 Real Time Air Monitoring

GZA performed real-time air quality monitoring during installation activities using hand held instruments consistent with the February 7, 2014 SSIWP and February 28, 2014 Addendum Letter to the SSIWP. This monitoring program included TVOCs and respirable dust in both the worker breathing zone and work zone perimeter. TVOCs were monitored using a hand held photoionization detector equipped with a 10.6 eV lamp. Particulate dust was monitored using a DustTrak portable dust meter. Equipment was calibrated at the beginning of work every day. The work zone perimeter action limit for TVOCs and dust was set at 0.1 parts per million (ppmv) and 150 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$), respectively, which were consistent with the Site perimeter action limits established in the April 2011 Air Quality Monitoring Plan (AQMP) for the Tidewater Site. Additionally, GZA had a portable field gas chromatograph (Photovac Voyager) available on-Site to measure real-time benzene concentrations in the event that TVOCs were detected above the threshold levels described above for a sustained period of more than 5 minutes (i.e., TVOC readings sustained for more than 5 minutes above the 0.1 ppmv threshold). Summa canisters were also available to immediate deploy in the event that TVOCs were detected above the threshold levels for a sustained period of more than 5 minutes.

No transient (elevated reading observed for less than 5 minutes) or sustained (elevated readings observed for more than 5 minutes) readings above the threshold values were noted for either TVOCs or respirable dust during the air monitoring. As such, neither the Photovac Voyager nor the summa canisters were deployed. The air monitoring

data was posted to both the Site's website (www.tidewatersite.com) and to the bulletin boards at the end of Tidewater Street and Bowles Court on the Monday following installation. Air monitoring data graphs are included as Appendix E.

2.20.4 Soil Boring Laboratory Analyses

Subsurface soil samples were collected from each boring exploration for potential analytical testing. Nine (9) subsurface soil samples were submitted for laboratory testing during this supplemental investigation program. This includes the collection and analysis of one duplicate soil sample. From each boring, the soil sample from the 4-6 foot sample interval was submitted for analytical testing to assess soil concentrations coincident with the soil gas sample collection depth for SG-105S. In addition, supplemental soil samples were selected for laboratory analysis based on field screening results and visual observations. Soil samples were submitted for laboratory analysis for VOCs using EPA Method 8260.

The samples were collected in non-preserved 8 oz. glass containers with Teflon lids as well as in 40-ml methanol-preserved glass vials with septa caps. All soil samples were packed in an ice chest and transported under chain-of-custody protocol to ESS Laboratory in Cranston, RI. A copy of the subsurface soil boring analytical results and chain-of-custody forms are presented in Appendix F and the analytical results are summarized in Table 1 (VOC analyses). Quality control and quality assurance (QA/QC) samples were also collected and analyzed during the Supplemental SI program. These QA/QC procedures and samples are summarized in Section 2.30.

2.20.5 Groundwater Depths and Elevations

Following well development activities, GZA recorded depth to groundwater readings on April 17 and 22, 2014 in each of the newly installed monitoring wells using an electronic water level indicator. GZA also surveyed the vertical elevation of the top of the PVC well casing and adjacent ground surface for each new well relative to the 1929 National Geodetic Vertical datum (NGVD 1929). These depths to groundwater readings and reference elevations were used to calculate the elevation of the groundwater table at each well location. Monitoring well reference elevations and depth to groundwater measurements are presented in Table 2.

2.20.6 Groundwater Sampling and Analysis

Groundwater samples were collected on April 17, 2014 from the two (2) new groundwater monitoring wells in general accordance with EPA's January 19, 2010 *Low Stress (low flow) Purging and Sampling Procedure* (Low Flow SOP). Prior to sampling, the depth to static groundwater and NAPL present was measured in each well using an ORS electronic oil/water interface probe. During groundwater sampling, a variable speed peristaltic pump or submersible pump was utilized to control the rate of purging. Dedicated 3/8-inch polyethylene tubing installed in each of the wells was utilized as the intake and discharge tubing for the pump. This tubing has the potential to become brittle when

exposed to UV light (sunlight) and where necessary this tubing was replaced with new dedicated tubing as indicated on the field sampling logs (Appendix G). Pharmaceutical grade tubing was utilized as the pump head tubing and connected to the intake and discharge tubing by clamps sufficient to prevent the introduction of air into the sample.

During sampling, field readings were recorded for pH, temperature, specific conductance, oxidation reduction potential (ORP) and dissolved oxygen (DO) using a YSI Professional Plus® portable water quality meter with a flow-through cell. A LaMotte Turbidimeter® was used to monitor the turbidity. These field readings are presented in the field sampling logs, attached as Appendix G. As indicated on the logs, the monitoring wells were pumped until field screening parameters were stabilized prior to collecting the samples.

All purgewater generated during sampling was containerized in labeled 55-gallon steel drums. Once the sampling events were complete, the drums were removed from the Site by CHES for proper disposal on May 15, 2014. Copies of the disposal manifests are included in Appendix D.

Samples were placed in laboratory-provided, hydrochloric acid-preserved 40 mL glass vials with septa caps for VOC analysis via EPA Method 8260B. Samples were then packed in an ice chest and transported under chain-of-custody protocol to ESS Laboratory located in Cranston, Rhode Island.

The analytical results from these groundwater monitoring activities are provided in Appendix H and summarized in Table 3. QA/QC samples were also collected and analyzed during these groundwater sampling activities. These QA/QC procedures and samples are summarized below in Section 2.30.

2.30 QUALITY ASSURANCE / QUALITY CONTROL PROCEDURES AND SAMPLES

All sample collection, handling, storage, field screening methods, transportation, and analyses were conducted in general accordance with the February 2014 SSIWP to ensure that results are accurate and representative. In addition and as described below, in accordance with the February 2014 SSIWP, GZA collected and analyzed field duplicate samples and trip blanks.

Field duplicate samples were collected and analyzed to evaluate the reproducibility of the sampling methods. Duplicate VOC soil samples were collected directly from the 2-inch acetate samplers. Duplicate groundwater samples were collected sequentially after achieving stabilization of the geochemical parameters. Duplicate soil samples were collected at a frequency of one duplicate for every eight samples analyzed and duplicate groundwater samples were collected at a frequency of one for every four samples analyzed. Duplicate soil and groundwater sampling results are included in the applicable summary tables, with a reference to the applicable sample location in the table note section.

A VOC trip blank accompanied each cooler of soil and groundwater samples to the laboratory and was analyzed for the presence of VOCs to evaluate potential cross contamination during sample transport. Soil trip blank analytical results are summarized in Table 1 and groundwater trip blank analytical results are summarized in Table 3.

Upon receipt, GZA audited the analytical data to assess whether the analytical data met the data quality objectives of the project. This audit included evaluation of QA/QC samples (e.g., Lab Control Samples (LCS)/Lab Control Sample Duplicates (LCSD), Method Blanks, Field Blanks, and Field Duplicates) to evaluate the representativeness, comparability, completeness, precision, accuracy, and sensitivity of the analytical data.

Both the soil and groundwater analytical results met the project data quality objectives. The following presents a summary of soil QA/QC results:

- VOCs were not detected in either of the two trip blanks that accompanied the soil samples, indicating that cross contamination was not an issue during soil sampling handling and transportation activities.
- One duplicate field sample set (BD 3 collected from TB-403 10-12 feet bgs) was submitted for analysis to evaluate sample reproducibility. The Relative Percent Difference (RPD) was calculated for each compound and was within acceptable ranges (less than 40% difference).
- Two duplicate laboratory sample sets (LCS/LCSD) were submitted for analysis to evaluate sample reproducibility. The Relative Percent Difference (RPD) was calculated for each compound and was within acceptable ranges (less than 40% difference).
- Copies of the original laboratory data, laboratory QA/QC, methods, and chain-of-custody form are provided for reference in Appendix F.

The following presents a summary of groundwater QA/QC results:

- VOCs were not detected in the trip blank that accompanied the groundwater samples, indicating cross contamination was not an issue during groundwater sampling handling and transportation activities.
- One duplicate field sample set (BD collected from MW-401) was submitted for analysis to evaluate sample reproducibility. The Relative Percent Difference (RPD) was calculated for each compound. An elevated RPD (more than 40% difference) was noted for the compound chloromethane. Given the very low concentrations that were detected and the fact that chloromethane is not a contaminant of concern for the Tidewater site, it is not expected that this variability significantly affects the data usability.
- One duplicate laboratory sample set (LCS/LCSD) was submitted for analysis to evaluate sample reproducibility. The Relative Percent Difference (RPD) was calculated for each compound and was within acceptable ranges (less than 40% difference).
- Copies of the original laboratory data, laboratory QA/QC, methods, and chain-of-custody form are provided for reference in Appendix H.

3.00 INVESTIGATION RESULTS

The following sections present the findings of the April 2014 investigation program within and adjacent to the natural gas regulator station area. Section 3.10 presents a summary of the observed hydrogeologic conditions in the area of work. Sections 3.20, 3.30, and 3.40 present the results of field screening and observations of impacted soils, soil analytical results and groundwater analytical results, respectively.

3.10 HYDROGEOLOGIC CONDITIONS

The work area within the natural gas regulator station fence line gently slopes downward from west to east towards the main portion of the Site. With the exception of TB-403, approximately 2 feet of fill was observed, underlain by sands (designated as alluvium / outwash). Fill material consists of sandy materials mixed with varying percentages of relatively inert materials such as brick, concrete, and asphalt. In general, the presence of these types of anthropologic materials was used to support the soil being classified as fill. No fill was observed at TB-403. The sands underlying the fill were classified as alluvium / outwash which is characterized by fine well stratified sands with bands of coarser sands. In general, the sands were observed to be coarser with increasing depth. Neither glacial till nor bedrock was observed in any of the borings which extended to depths of 20 to 25 feet below grade.

During drilling, groundwater was observed in the borings at depths ranging from approximately 12 to 16 feet bgs. GZA recorded depth to groundwater at both newly installed monitoring wells on April 17, 2014 and April 22, 2014. The groundwater elevations at each monitoring well were subsequently calculated. As indicated in Table 2, measured depth to groundwater was approximately the same as observed during the drilling program, with the natural groundwater table observed within the native sands layer. NAPL was not observed either in the drilling program or during either groundwater gauging events.

3.20 FIELD SCREENING AND VISUAL OBSERVATIONS

As discussed in Section 3.10, approximately 2 feet of fill was noted in each boring except TB-403. Fill materials in this portion of the Site were noted to consist of sandy materials mixed with varying percentages of asphalt fragments, concrete fragments, and brick. TVOC concentrations as measured by the PID were generally non-detect with the exception of relatively low detections in TB-403 (ranging from none detected (ND) to 9.5 parts per million volume basis (ppmv)). As shown on Figure 2, this boring is located closest to the natural gas regulator facility, approximately 50 feet northwest of SG-105S. The TVOC concentrations that were detected in soil collected from TB-403 increased with depth to the water table (at approximately 14 feet bgs) and thereafter decreased to ND. Visual and/or olfactory evidence of impacts were not noted in any of the borings.

3.30 SOIL ANALYTICAL RESULTS

Table 1 presents a summary of the soil analytical results. Eight (8) soil samples were collected as part of this investigation and submitted for analysis of VOCs via EPA Method 8260B. Two soil samples were submitted from each boring: a sample from 4 to 6 feet bgs and another sample from a deeper interval in the boring. The sample from each boring from 4 to 6 feet bgs was submitted to assess the concentration of VOCs in the soil at the interval where elevated benzene concentrations were detected in soil gas at SG-105S (5 feet bgs). VOCs were detected in two soil samples (2/8) from borings TB-400 (10-12 feet) and TB-403 (4-6 feet). The only VOC detected was naphthalene at concentrations ranging from 0.0268 to 0.124 mg/kg, well below the I/C-DEC of 10,000 mg/kg. Benzene was not detected in any of the 4-6 foot soil samples or deeper soil samples. There were no exceedances of the I/C-DEC or the GB Leachability Criteria for VOCs.

3.40 GROUNDWATER ANALYTICAL RESULTS

Groundwater samples were collected from MW-400 and MW-401 and submitted for analysis of VOCs via EPA Method 8260B. As presented in Table 3, the only compound detected in groundwater was chloromethane in MW-401 at a concentration of 0.0069 mg/L.² RIDEM has not established any groundwater objectives for chloromethane. Neither benzene nor naphthalene was detected in either groundwater sample.

4.00 SUMMARY AND CONCLUSIONS

National Grid completed a soil and groundwater sampling and testing program designed to further evaluate the localized detection of benzene in soil gas at SG-105S located proximate to the natural gas regulator station. The investigation was conducted under the direction of the RIDEM.

A total of four (4) test borings were advanced, two (2) of which were completed as groundwater monitoring wells. Eight (8) soil samples and two (2) groundwater samples were submitted for laboratory analysis for VOCs via EPA Method 8260. From each boring, the soil sample from the 4-6 foot sample interval was submitted for analytical testing to assess soil concentrations coincident with the soil gas sample collection depth for SG-105S (approximately 5 feet). In addition, one deeper sample was submitted based on the results of field screening. Groundwater was encountered during the investigation at depths ranging from approximately 12 to 17 feet bgs.

As noted above, benzene was not detected in either soil or groundwater samples collected from this area of the Site. No significant levels of any other VOCs were detected in either soil or groundwater. These results, along with the isolated nature of the soil gas detection at SG-105S, do not indicate the presence of soil or groundwater impacts in this area of the Site. It is

² The concentration of chloromethane detected in the sample from MW-401 was 0.0029 mg/L and the concentration detected in BD (blind duplicate sample) was 0.0069 mg/L. BD is the blind duplicate sample that was submitted from MW-401. It is noted that chloromethane is a common laboratory contaminant.

likely that the benzene detected in soil gas at SG-105S is attributable to a localized shallow soil impact located either within the natural gas regulator station fence line or outside the fence on the Merry Street extension. The observations made during this supplemental investigation program do not warrant further soil and groundwater investigation and do not alter the conclusions presented in our July 2011 *Remedial Alternative Evaluation*.

National Grid will re-sample soil gas from SG-105S during the next quarterly monitoring event (currently scheduled for July 2014). The data from this re-sampling event along with any additional recommendations will be submitted to RIDEM in the form of a brief letter report. National Grid continues to be committed to keeping neighbors, the nearby schools, parents and other stakeholders informed about the activities at the Tidewater Site.

Notes

NE = Not Established

NA = Not Analyzed

As described in the Remediation Regulations, the Direct Exposure and Leachability Criteria apply throughout the vadose zone. All soil data collected at the Site were within the vadose zone and comparisons to applicable I/C-DEC and GB Leachability Criteria are presented for each sample.

Gray shaded cells indicates the concentration exceeds the RIDEM Method 1 Industrial/Commercial Direct Exposure Criteria (I/C-DEC).

Detection limits highlighted in *blue and in italics* exceed the RIDEM Method 1 Criteria.

Concentrations **bolded and underlined** exceed the RIDEM Method 1 GB Leachability Criteria.

A concentration with a bold border exceeds the Upper Concentration Limit (UCL).

BD 3 is the blind duplicate for TB-403 12-14

APPENDIX A

LIMITATIONS

LIMITATIONS

1. This Site Investigation Report Addendum has been prepared on behalf of and for the exclusive use of The Narragansett Electric Company d/b/a National Grid (National Grid), solely for use in documenting the work completed as described herein at the Former Tidewater MGP and Merry Street ("Site") under the applicable provisions of the State of Rhode Island Department of Environmental Management Rules and Regulations for the Investigation and Remediation of Hazardous Material Releases (Remediation Regulations). This report and the findings contained herein shall not, in whole or in part, be disseminated or conveyed to any other party, nor used by any other party in whole or in part, without the prior written consent of GZA GeoEnvironmental, Inc.(GZA) or National Grid.
2. GZA's work was performed in accordance with generally accepted practices of other consultants undertaking similar studies at the same time and in the same geographical area, and GZA observed that degree of care and skill generally exercised by other consultants under similar circumstances and conditions. GZA's findings and conclusions must be considered not as scientific certainties, but rather as our professional opinion concerning the significance of the limited data gathered during the course of the study. No other warranty, express or implied is made. Specifically, GZA does not and cannot represent that the Site contains no hazardous material, oil, or other latent condition beyond that observed by GZA during the work described herein.
3. The observations described in this report were made under the conditions stated therein. The conclusions presented in the report were based upon services performed and observations made by GZA.
4. In the event that National Grid or others authorized to use this report obtain information on environmental or hazardous waste issues at the Site not contained in this report, such information shall be brought to GZA's attention forthwith. GZA will evaluate such information and, on the basis of this evaluation, may modify the conclusions stated in this report.
5. The conclusions and recommendations contained in this report are based in part upon the data obtained from environmental samples obtained from relatively widely spread subsurface explorations. The nature and extent of variations between these explorations may not become evident until further exploration. If variations or other latent conditions then appear evident, it will be necessary to reevaluate the conclusions and recommendations of this report.
6. The generalized soil profile described in the text is intended to convey trends in subsurface conditions. The boundaries between strata are approximate and idealized and have been developed by interpretations of widely spaced explorations and samples; actual soil transitions are probably more gradual. For specific information, refer to the boring logs.

7. In the event this work included the collection of water level data, these readings have been made in the test pits, borings and/or observation wells at times and under conditions stated on the exploration logs. These data have been reviewed and interpretations have been made in the text of this report. However, it must be noted that fluctuations in the level of the groundwater may occur due to variations in rainfall and other factors different from those prevailing at the time measurements were made.
8. The conclusions contained in this report are based in part upon various types of chemical data and are contingent upon their validity. These data have been reviewed and interpretations made in the report. Moreover, it should be noted that variations in the types and concentrations of contaminants and variations in their flow paths may occur due to seasonal water table fluctuations, past disposal practices, the passage of time, and other factors. Should additional chemical data become available in the future, these data should be reviewed by GZA and the conclusions and recommendations presented herein modified accordingly.

Re: Notice to Abutters and/or Interested Parties
Supplemental Site Investigation Work Plan Addendum – Limited Soil and Groundwater Investigation
Former Tidewater Facility
Pawtucket, Rhode Island
RIDEM Case No. 95-022

530 Broadway
Providence
Rhode Island
02909
401-421-4140
Fax: 401-751-8613
<http://www.gza.com>

Dear Abutters and/or Interested Parties:

The purpose of this letter is to notify you that The Narragansett Electric Company d/b/a National Grid (National Grid) will be conducting additional limited environmental testing activities associated with the former Tidewater Manufactured Gas Plant (MGP) and the former Pawtucket No. 1 Power Station Site (the Site) located at the ends of Tidewater and Merry Streets in Pawtucket, Rhode Island. This notice is being provided to abutting property owners, tenants and members of the Tidewater Site mailing list in accordance with requirements established in the Rhode Island Department of Environmental Management's (RIDEM) Rules and Regulation for the Investigation and Remediation of Hazardous Materials (Remediation Regulations) and the October 2013 Public Involvement Plan (PIP). Should you be an owner of property that is leased, we request that you provide a copy of this letter to your tenants.

National Grid plans to perform two test borings and install two groundwater monitoring wells near the active natural gas regulator station located at the Site. These investigations are designed to further evaluate results of the soil gas testing performed near the gas regulator station. National Grid will collect soil and groundwater samples from the borings and monitoring wells. Real time air quality monitoring will be performed during the drilling work using hand held instruments for dust and total volatile organic compounds (TVOCs).

Contractors will begin installing the test borings and wells on or about March 10, 2014. It will take approximately 2 days to install the borings and wells and another 2 to 3 days to collect the groundwater samples. The results of the additional soil and groundwater investigation will be submitted to RIDEM and posted to the Tidewater and RIDEM websites (<http://www.tidewatersite.com>) and (<http://www.dem.ri.gov/programs/benviron/waste/tide.htm>). The results of the initial soil gas investigation are also available on these websites. The air monitoring data will be posted to the bulletin boards at the end Tidewater Street and Bowles Court and the Tidewater website by the Monday following the work.

The proposed activities are further detailed in a *Supplemental Site Investigation Work Plan (SSIWP) Addendum* submitted to RIDEM on February 10, 2014. The SSIWP is available on the Tidewater website (www.tidewatersite.com). There is a 14-day comment period, commencing with the date of delivery of this notice, during which the public may review RIDEM records pertaining to this property and submit written comments regarding the proposed investigation activities described herein. These activities will be conducted in accordance with RIDEM's Remediation Regulations and will be performed by GZA GeoEnvironmental, Inc. (GZA) on behalf of National Grid.

If you would like more information or have any questions, please contact Michele Leone of National Grid at 781-907-3651.

Very truly yours,

GZA GEOENVIRONMENTAL, INC.

Margaret S. Kilpatrick, P.E.

Ref: Notificação aos donos de propriedades adjacentes e/ou partes interessadas
Adendo ao Plano de Trabalho de Investigação Complementar no Local – Investigação Limitada do Solo e da Água Subterrânea
Previamente Tidewater Facility
Pawtucket, Rhode Island
Caso nº 95-022 RIDEM

530 Broadway
Providence
Rhode Island
02909
401-421-4140
Fax: 401-751-8613
<http://www.gza.com>

Prezados donos de propriedades adjacentes e/ou partes interessadas,

O objetivo desta carta é notificá-los de que a Companhia Elétrica Narragansett, sob o nome comercial National Grid (National Grid) estará conduzindo atividades adicionais de testes ambientais limitados associadas à antiga Fábrica de Gás Manufaturado Tidewater (sigla em inglês, MGP) e ao antigo local da Central Elétrica Pawtucket Nº 1 (o Local), localizados no final das ruas Tidewater e Merry, em Pawtucket, Rhode Island. Esta notificação está sendo fornecida aos donos das propriedades adjacentes, inquilinos e membros da lista de mala direta da Tidewater Site, de acordo com os requisitos estabelecidos nas Regras e regulamentação para a investigação e remediação de materiais perigosos (Regulamentações de Remediação) do Departamento de Gestão Ambiental de Rhode Island (sigla em inglês, RIDEM) e o Plano de Envolvimento Público (sigla em inglês, PIP) de outubro de 2013. Caso seja dono de uma propriedade que esteja alugada, solicitamos que forneça uma cópia desta carta aos seus inquilinos.

A National Grid planeja realizar dois testes com sondas e instalar dois poços de monitoramento subterrâneo perto da estação ativa reguladora de gás natural localizada no Local. Estas investigações são concebidas para avaliar os resultados dos testes de gás no solo realizados perto da estação reguladora de gás. A National Grid coletará amostras do solo e da água subterrânea das sondas e dos poços de monitoramento. O monitoramento da qualidade do ar em tempo real será realizado durante o trabalho de perfuração usando instrumentos portáteis para poeira e compostos orgânicos voláteis totais. Os empreiteiros começarão a instalar as sondas de teste e os poços por volta do dia 10 de março de 2014. Levará aproximadamente 2 dias para instalar as sondas e os poços, e outros 2 a 3 dias para coletar as amostras de água subterrânea. Os resultados da investigação adicional do solo e da água subterrânea serão apresentados ao RIDEM e publicados nos sites da Tidewater e do RIDEM, (<http://www.tidewatersite.com> e <http://www.dem.ri.gov/programs/benviron/waste/tide.htm>). Os resultados da investigação inicial de gás no solo também estão disponíveis nestes sites. Os dados do monitoramento do ar serão publicados nos painéis informativos no final da Tidewater Street e Bowles Court e no site da Tidewater na segunda-feira após o trabalho.

As atividades propostas serão mais detalhadas em um *Adendo ao Plano de Trabalho de Investigação Complementar no Local* (sigla em inglês, SSIWP) apresentado ao RIDEM em 10 de fevereiro de 2014. O SSIWP está disponível no site da Tidewater (www.tidewatersite.com). Há um período de 14 dias para comentários, começando a partir da data da entrega desta notificação, durante o qual o público pode analisar os registros do RIDEM pertencentes a esta propriedade e apresentar comentários por escrito relativos às atividades propostas de investigação descritas neste documento. Estas atividades serão conduzidas de acordo com as Regulamentações de Remediação do RIDEM e serão executadas pela GZA GeoEnvironmental, Inc. (GZA), em nome da National Grid.

Caso queiram mais informações ou tenham alguma dúvida, por favor, entrem em contato com Michele Leone da National Grid pelo telefone 781-907-3651.

Sinceramente,

GZA GEOENVIRONMENTAL, INC.

Asunto: Aviso para propietarios colindantes y partes interesadas
Anexo del Plan de Trabajo de Investigación Complementario en el Sitio – Investigación restringida del suelo y de las aguas subterráneas
Ex instalaciones de Tidewater
Pawtucket, Rhode Island
Caso del RIDEM n.º 95-022

Estimados propietarios colindantes y partes interesadas:

Le enviamos esta carta para notificarle que The Narragansett Electric Company, de nombre comercial National Grid (National Grid) comenzará a realizar pruebas ambientales restringidas adicionales en conjunto con la antigua planta Tidewater Manufactured Gas Plant (MGP) y la antigua Pawtucket No. 1 Power Station Site (el Sitio) ubicada al final de las calles Tidewater y Merry Street en Pawtucket, Rhode Island. Este es un aviso para dueños de propiedades colindantes, inquilinos y miembros de la lista de correo del Sitio Tidewater de conformidad con los requisitos establecidos en las *Normas y Regulaciones para la Investigación y el Saneamiento de Emisiones de Materiales Peligrosos* (las Normas de Saneamiento) del Departamento de Gestión Ambiental de Rhode Island (RIDEM, por sus siglas en inglés) y el Plan de Participación Pública (PIP, por sus siglas en inglés) de octubre de 2013. Si usted es dueño de una propiedad que está alquilada, le solicitamos que facilite una copia de esta carta a sus inquilinos.

National Grid planea realizar dos pruebas de sondeos e instalar dos pozos de monitoreo de agua subterránea cerca de la estación reguladora de gas natural activa ubicada en el Sitio. Estas investigaciones están diseñadas para seguir evaluando los resultados de las pruebas de gas en el suelo realizadas cerca de la estación reguladora de gas. National Grid recolectará muestras de suelo y de las aguas subterráneas de los pozos de monitoreo y de sondeo. **El control de calidad del aire en tiempo real se realizará durante el trabajo de perforación utilizando instrumentos portátiles para polvo y emisiones de compuestos orgánicos volátiles (TVOCs, por sus siglas en inglés).**

Los contratistas comenzarán a instalar los dispositivos para pruebas de sondeo y a construir los pozos el 10 de marzo de 2014 o alrededor de esa fecha. Las tareas concluirán en 2 días, aproximadamente, y les tomará otros 2 o 3 días recoger las muestras de agua subterránea. Los resultados de esta investigación adicional de suelo y agua subterránea serán presentados ante el RIDEM y publicados en los sitios web de Tidewater (<http://www.tidewatersite.com>) y RIDEM (<http://www.dem.ri.gov/programs/benviron/waste/tide.htm>). Los resultados de la investigación inicial de gas en el suelo también se encuentran disponibles en estos sitios web. **La información sobre el control de aire será publicada en los tableros de anuncios al final de la calle Tidewater Street y Bowles Court, y en el sitio web de Tidewater el lunes luego de finalizado el trabajo.**

Se podrán encontrar más detalles sobre las actividades propuestas en el *anexo del Plan de Trabajo de Investigación Complementario en el Sitio* (SSIWP) presentados ante el RIDEM el 10 de febrero de 2014. SSIWP está disponible en el sitio web de Tidewater (www.tidewatersite.com). El día de presentación de la presente notificación se inicia un período de 14 días para realizar comentarios. Durante este lapso, se podrán revisar los registros del RIDEM correspondientes a esta propiedad y presentar comentarios por escrito relacionados con las actividades de investigación propuestas antes mencionadas. Estas actividades serán llevadas a cabo de acuerdo con las Normas de Saneamiento del RIDEM y serán realizadas por GZA GeoEnvironmental, Inc. (GZA) en nombre de National Grid.

Si desea obtener más información o tiene alguna consulta, comuníquese con Michele Leone de National Grid al 781-907-3651.

Cordialmente,

GZA GEOENVIRONMENTAL, INC.

GZA GeoEnvironmental, Inc.
530 Broadway
Providence, RI 02909

RE: Tidewater GH (03.0043654)
ESS Laboratory Work Order Number: 1404134

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED

By ESS Laboratory at 4:17 pm, Apr 11, 2014

Analytical Summary

The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with NELAC Standards, A2LA and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

CERTIFICATE OF ANALYSIS

SAMPLE RECEIPT

The following samples were received on April 04, 2014 for the analyses specified on the enclosed Chain of Custody Record.

The samples and analyses listed below were analyzed in accordance with the Guidelines Establishing Test Procedures for the Analysis of Pollutants, 40 CFR Part 136, as amended.

<u>Lab Number</u>	<u>Sample Name</u>	<u>Matrix</u>	<u>Analysis</u>
1404134-01	TB-400 4-6	Soil	8260B

RE: Tidewater GH (03.0043654.T13)
ESS Laboratory Work Order Number: 1404160

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED

By ESS Laboratory at 4:28 pm, Apr 14, 2014

Analytical Summary

The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with NELAC Standards, A2LA and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

SAMPLE RECEIPT

The following samples were received on April 07, 2014 for the analyses specified on the enclosed Chain of Custody Record.

The samples and analyses listed below were analyzed in accordance with the Guidelines Establishing Test Procedures for the Analysis of Pollutants, 40 CFR Part 136, as amended.

<u>Lab Number</u>	<u>Sample Name</u>	<u>Matrix</u>	<u>Analysis</u>
1404160-01	TB-400 10-12	Soil	8260B
1404160-02	TB-401 6-8	Soil	8260B

Notes and Definitions

U	Analyte included in the analysis, but not detected
D	Diluted.
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report

Sample and Cooler Receipt Checklist

Client: GZA GeoEnvironmental, Inc.
 Client Project ID: _____
 Shipped/Delivered Via: Client

ESS Project ID: 14040160
 Date Project Due: 4/15/14
 Days For Project: 5 Day

Items to be checked upon receipt:

- | | | | |
|--|-------------------------------|---|--|
| 1. Air Bill Manifest Present? | <input type="checkbox"/> * No | 10. Are the samples properly preserved? | <input type="checkbox"/> Yes |
| Air No.: | | 11. Proper sample containers used? | <input type="checkbox"/> Yes |
| 2. Were Custody Seals Present? | <input type="checkbox"/> No | 12. Any air bubbles in the VOA vials? | <input type="checkbox"/> N/A |
| 3. Were Custody Seals Intact? | <input type="checkbox"/> N/A | 13. Holding times exceeded? | <input type="checkbox"/> No |
| 4. Is Radiation count < 100 CPM? | <input type="checkbox"/> Yes | 14. Sufficient sample volumes? | <input type="checkbox"/> Yes |
| 5. Is a cooler present? | <input type="checkbox"/> Yes | 15. Any Subcontracting needed? | <input type="checkbox"/> No |
| Cooler Temp: -1.1 | | 16. Are ESS labels on correct containers? | <input type="checkbox"/> Yes <input type="checkbox"/> No |
| Iced With: Ice | | 17. Were samples received intact? | <input type="checkbox"/> Yes <input type="checkbox"/> No |
| 6. Was COC included with samples? | <input type="checkbox"/> Yes | ESS Sample IDs: _____ | |
| 7. Was COC signed and dated by client? | <input type="checkbox"/> Yes | Sub Lab: _____ | |
| 8. Does the COC match the sample | <input type="checkbox"/> Yes | Analysis: _____ | |
| 9. Is COC complete and correct? | <input type="checkbox"/> Yes | TAT: _____ | |

18. Was there need to call project manager to discuss status? If yes, please explain.

Who was called?: _____ By whom?: _____

Sample Number	Properly Preserved	Container Type	# of Containers	Preservative

GROUNDWATER LABORATORY DATA CERTIFICATES

CERTIFICATE OF ANALYSIS

Meg Kilpatrick
GZA GeoEnvironmental, Inc.
530 Broadway
Providence, RI 02909

RE: Tidewater GH (03.0043654)
ESS Laboratory Work Order Number: 1404413

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED

By ESS Laboratory at 3:25 pm, Apr 23, 2014

Analytical Summary

The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with NELAC Standards, A2LA and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

Client Name: GZA GeoEnvironmental, Inc.

Client Project ID: Tidewater GH

ESS Laboratory Work Order: 1404413

SAMPLE RECEIPT

The following samples were received on April 17, 2014 for the analyses specified on the enclosed Chain of Custody Record.

The samples and analyses listed below were analyzed in accordance with the Guidelines Establishing Test Procedures for the Analysis of Pollutants, 40 CFR Part 136, as amended.

<u>Lab Number</u>	<u>Sample Name</u>	<u>Matrix</u>	<u>Analysis</u>
1404413-01	BD	Ground Water	8260B
1404413-02	MW-400	Ground Water	8260B
1404413-03	MW-401	Ground Water	8260B
1404413-04	Trip Blank	Aqueous	8260B

Notes and Definitions

U	Analyte included in the analysis, but not detected
D+	Relative percent difference for duplicate is outside of criteria (D+).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report

Sample and Cooler Receipt Checklist

Client: GZA GeoEnvironmental, Inc.
 Client Project ID: _____
 Shipped/Delivered Via: Client

ESS Project ID: 14040413
 Date Project Due: 4/24/14
 Days For Project: 5 Day

Items to be checked upon receipt:

- | | | | |
|--|-------------------------------|---|--|
| 1. Air Bill Manifest Present? | <input type="checkbox"/> * No | 10. Are the samples properly preserved? | <input type="checkbox"/> Yes |
| Air No.: | | 11. Proper sample containers used? | <input type="checkbox"/> Yes |
| 2. Were Custody Seals Present? | <input type="checkbox"/> No | 12. Any air bubbles in the VOA vials? | <input type="checkbox"/> No |
| 3. Were Custody Seals Intact? | <input type="checkbox"/> N/A | 13. Holding times exceeded? | <input type="checkbox"/> No |
| 4. Is Radiation count < 100 CPM? | <input type="checkbox"/> Yes | 14. Sufficient sample volumes? | <input type="checkbox"/> Yes |
| 5. Is a cooler present? | <input type="checkbox"/> Yes | 15. Any Subcontracting needed? | <input type="checkbox"/> No |
| Cooler Temp: 4.9 | | 16. Are ESS labels on correct containers? | <input type="checkbox"/> Yes <input type="checkbox"/> No |
| Iced With: Ice | | 17. Were samples received intact? | <input type="checkbox"/> Yes <input type="checkbox"/> No |
| 6. Was COC included with samples? | <input type="checkbox"/> Yes | ESS Sample IDs: _____ | |
| 7. Was COC signed and dated by client? | <input type="checkbox"/> Yes | Sub Lab: _____ | |
| 8. Does the COC match the sample | <input type="checkbox"/> Yes | Analysis: _____ | |
| 9. Is COC complete and correct? | <input type="checkbox"/> Yes | TAT: _____ | |

18. Was there need to call project manager to discuss status? If yes, please explain.

Who was called?: _____

By whom? _____

Sample Number	Properly Preserved	Container Type	# of Containers	Preservative
1	Yes	40 ml - VOA	3	HCL
2	Yes	40 ml - VOA	3	HCL
3	Yes	40 ml - VOA	3	HCL
4	Yes	40 ml - VOA	3	HCL
