Re: Trestle Trail, Coventry Rhode Island
Site Investigation Report Addendum

Dear Mr. Fleury:

Vanasse Hangen Brustlin Inc. (VHB), on behalf of our client, Prime Engineering, Inc. (PEI), submits this Site Investigation Report (SIR) Addendum to summarize additional investigations that have been conducted along the Trestle Trail right-of-way (ROW). Trestle Trail is approximately 10 miles in length and is located in the Town of Coventry. Its alignment is depicted in **Figure 1.**

Laboratory analytical results from previous investigation activities indicated that additional investigation was needed in five areas:

- The area of ROW south of the RICONN airport where soil samples exceeded the Rhode Island Department of Environmental Management (RIDEM) Residential Direct Exposure Criteria (RDEC) for polycyclic aromatic hydrocarbons (PAHs) and the Industrial/Commercial Direct Exposure Criteria (I/CDEC) for the PAH benzo(a)pyrene;

- The area of ROW proximate to soil sample SS-3, located east of Hopkins Hollow Road where soil samples exceeded the RIDEM RDEC and the I/CDEC for arsenic;

- The area of ROW proximate to soil sample SS-2 where soil samples exceeded the RIDEM RDEC for beryllium;

- The area of ROW proximate to RI Processing and SS-1, located near the intersection of Phillips Hill Road and Hill Farm Road, where soil samples exceeded the RDEC for PAHs and beryllium and the I/CDEC for arsenic; and

- The area of ROW south of Coventry Auto Body where soil samples exceeded the RIDEM RDEC for beryllium and the I/CDEC for arsenic.

10 Dorrance Street, Suite 400
Providence, Rhode Island 02903
401.272.8100 ▪ FAX 401.273.9694
email: info@vhb.com
www.vhb.com

In addition, comments received from the public during the public meeting held on July 12, 2011 and during the subsequent comment period indicated two additional areas for investigation:

- The ROW intersection with Hopkins Hollow Road in the Village of Greene (hereafter referred to as "Greene"); and
- The ROW intersection with Camp Westwood Road.

VHB and New England Geotech, LLC (NE Geotech) mobilized to these locations in October and December, 2011 to advance soil borings using a track-mounted geoprobe drill rig. Soil borings were advanced to a depth of two feet below surface grade, a VHB scientist logged soil morphology descriptions, screened soil samples using a photoionization detector (PID) equipped with a 10.6 eV lamp, and collected soil samples for laboratory analysis. Soil boring logs, summary data tables, and figures depicting the locations of soil samples are attached. In the interest of clarity, the results of these additional investigations will be discussed from west to east.

RICONN Airport

Laboratory analytical results of soil samples collected in September 2008 indicated concentrations of arsenic and PAHs exceeded RIDEM direct exposure criteria in RICONN-1, RICONN-2 and RICONN-3. Because of the relatively large distance between these samples (approximately 800 feet), additional samples were collected on October 3, 2011 at 50 foot intervals in between and on either side of these samples. This resulted in the collection of 39 additional soil samples.

Laboratory analytical results indicated that the extent of soil impacts east of RICONN-1 has been delineated, but the limits west of RICONN-3 have not been determined. Laboratory analytical results are summarized in **Table 1** and the soil sample locations are depicted on the RICONN Airport Site Plan (attached). Due to the proximity of the western-most sample (SB-139) to the terminus of the project, it was decided that additional investigations in a westerly direction were not warranted and that the soil would be assumed to be impacted.

Greene

Based on comments received during the public meeting held on July 12, 2011 that a former depot was located in the Village of Greene, soil samples SS-201 and SS-202 were collected along the ROW on the west side of Hopkins Hollow Road while soil samples SS-203 and SS-204 were collected on the east side on October 3, 2011. Laboratory analytical results indicated concentrations of arsenic that exceeded the RIDEM I/CDEC in soil samples SS-201, SS-202, and SS-204. A summary of the analytical results are provided in **Table 2** and the soil sample locations are depicted on the Greene Site Plan.

On December 12, 2011, additional samples were collected to define the western extent of soil impacts. Soil samples SS-210 to SS-213 were collected and submitted for laboratory analysis for arsenic. Laboratory analytical results of soil sample SS-210 indicated concentrations of arsenic that exceeded the RIDEM I/CDEC and concentrations of PAHs that exceeded the RIDEM RDEC. All the remaining soil samples were compliant for arsenic and PAHs, indicating that the western extent of impact was defined.

SS-3, East of Hopkins Hollow Road

Soil sample SS-3 was collected on September 9, 2008 approximately 700 feet east of Bucks Horn Brook and 2,100 feet east of Hopkins Hollow Road. Laboratory analytical results indicated concentrations of arsenic that exceeded the RIDEM I/CDEC. On October 4, 2011, VHB re-mobilized to the Site and collected soil samples SB- 501 to SB-509. Soil samples SB-501 to SB-504 were collected west of soil sample SS-3. Laboratory analytical results indicated that these samples indicated no substances that exceeded RIDEM criteria. Laboratory analytical results are summarized in **Table 3** and the soil sample locations are depicted in the SS-3 Site Plan.

Laboratory analytical results of soil sample SB-506 indicated concentrations of arsenic that exceeded the RIDEM I/CDEC and chrysene that exceeded the RIDEM RDEC. Also, laboratory analytical results indicated concentrations of arsenic that exceeded the RIDEM I/CDEC in soil sample SB-509. These results indicated that the eastern extent of soil impacts was not defined. On December 12, 2011, VHB and NE Geotech mobilized to the Site to collect soil samples SB-510 to SB-513. Laboratory analytical results indicated concentrations of arsenic in soil samples SB-510 and SB-511 that exceeded the RIDEM I/CDEC (16.3 ppm and 7.4 ppm, respectively), but that both of the eastern-most soil samples (SB-512 and SB-513) were compliant for arsenic.

SS-2, Proximate to Route 102 (Victory Highway)

Soil sample SS-2 was collected along the portion of the ROW the travels beneath Route 102. Analytical results indicated concentrations of beryllium that exceeded the RIDEM RDEC. On October 5, 2011, VHB collected four additional soil samples west of SS-2. Laboratory analytical results of soil samples SB-601, Sb-602, and SB-603 indicated concentrations of beryllium (0.66 ppm, 0.52 ppm, and 0.75 ppm, respectively) that exceeded the RIDEM RDEC. A summary of laboratory analytical results is provided as **Table 4.** Refer to the SS-2 Site Plan for the soil sample locations.

In November 2011, RIDEM promulgated amendments to their *Rules and Regulations for the Investigation and Remediation of Hazardous Material Releases* (*Remediation Regulations*), which included a change to the beryllium RDEC. As part of the amendments, RIDEM used the statistical 95 percent upper confidence limit of natural background data across the state, which resulted in a new RDEC of 1.5 ppm. Based on these changes, the samples do not exceed the RIDEM RDEC and additional investigations were not warranted.

Camp Westwood Road

Based on comments received during the public meeting held on July 12, 2011, soil samples SS-701 and SS-702 were collected along the ROW on the west side of Camp Westwood Road while soil samples SS-703 and SS-704 were collected on the east side on October 3, 2011. Laboratory analytical results indicated concentrations of arsenic that exceeded the RIDEM I/CDEC in soil samples SB-701, SB-702, and SB-704, concentrations of PAHs in soil sample SB-701 that exceeded the RIDEM I/CDEC, and concentrations of PAHs that exceeded RIDEM RDEC in soil sample SB-704.

On December 13, 2011, VHB collected additional soil samples on both sides of Camp Westwood Road. On the west side of Camp Westwood Road, laboratory analysis of soil samples SB-705, SB-706 and SB-707 indicated concentrations of arsenic that exceeded the RIDEM I/CDEC and /or PAHs that exceeded the RIDEM RDEC. On the east side, laboratory analysis of soil sample SB-713 indicated concentrations of arsenic that exceeded the RIDEM I/CDEC and concentrations of arsenic that exceeded the RIDEM I/CDEC and PAHs that exceeded the RIDEM RDEC in SB-715. A summary of laboratory analytical results is provided as **Table 5** and the soil sample locations are depicted on the Camp Westwood Road Site Plan.

RI Processing and SS-1

In September 2008, soil samples were collected from the area of ROW proximate to RI Processing, located near the intersection of Phillips Hill Road and Hill Farm Road, where soil samples exceeded the RDEC for PAHs and beryllium and the I/CDEC for arsenic. A summary of laboratory analytical results is provided as **Table 6.** Refer to the RI Processing/SS-1 Site Plan for the soil sample locations.

On October 3, 2011, VHB collected an additional 12 soil samples for laboratory analysis for arsenic and PAHs. Laboratory analytical results indicated that there were no detections of PAHs above any RIDEM criteria and only soil sample SB-406 exceeded the RIDEM I/CDEC for arsenic.

Coventry Auto Body

On September 3, 2008, VHB collected soil samples from along the ROW behind Coventry Auto Body. Laboratory analytical results indicated concentrations of arsenic that exceeded the RIDEM I/CDEC. VHB returned to the Site on October 3, 2011 and collected soil samples SB-301, SB-302, and SB-303. Laboratory analytical results indicated that soil sample SB-303 exceeded the RIDEM I/CDEC for arsenic. A summary of laboratory analytical results is provided as **Table 7**. Refer to the Coventry Auto Body Site Plan for the soil sample locations.

Summary

Previous investigations conducted in 2008 identified areas of soil impacts along the ROW. Additional Site Investigation activities and laboratory analysis of soil samples collected from the ROW over two mobilizations in October and December, 2011 has indicated that the extent of identified soil impacts has been delineated. The Project Team requests that RIDEM deem the Site Investigation portion of the Project as complete through the issuance of a Program Letter. The Project Team can then provide abutter notification to transmit the results of the investigation and to present likely remediation scenarios.

If you have any questions or comments regarding these responses, please feel free to contact me at (401) 272-8100.

Very truly yours,
