RIDEM Case No. SR-28-2076
SAGE Project No. S3977**

Dear Ms. Burke:

SAGE Environmental, Inc. (SAGE) has prepared the subject letter to provide its responses to comments submitted by the Rhode Island Department of Environmental Management (RIDEM) in a letter dated May 15, 2023, following its review of a Site Investigation Report (SIR) submitted by SAGE on May 3, 2023.

Below provides the RIDEM SIR review comments and the corresponding responses.

RIDEM Comment #1:

It had been the Department's understanding that the Responsible and Performing Party is requesting to bifurcate the environmental approach to this Site by addressing the volatile organic compound (VOC) impacts to the indoor air quality in the immediate term. However, it is not clear to the Department if that is still the case nor exactly how a bifurcated process at this Site is envisioned. Please outline the process and timeline that is being proposed to investigate and remediate this Site moving forward. Additionally, please provide a detailed update as to the proposed reuse of the Site building.

SAGE Response:

As discussed during conference calls with the Department, there is a desire to get the site building indoor air compliant with Massachusetts Department of Environmental Protection (MassDEP) Residential Threshold Values (R-TVs) for contaminants of concern (COCs) as this pathway represents a direct exposure and when addressed could afford occupancy of the building for temporary housing. Understandably, it was expressed by the Department that such an approach could not be fully evaluated until such time the

SIR was submitted. Additionally, it was also discussed that an additional round of indoor air sampling upon the floors being sought for occupancy could help the Department provide its opinion and/or demonstrate areas that were acceptable in the interim of a long term control (i.e. sub-slab depressurization system (SSDS)). To that end, SAGE performed an additional round of indoor air sampling in May 2023, upon the first, second, and third floors of the building which was proposed in the SIR. This data showed no COCs (identified as chlorinated volatile organic compounds (CVOCs) Tetrachloroethene (PCE), Trichloroethene (TCE), Cis-1,2-Dichloroethene (Cis-1,2-DCE) or vinyl chloride (VC)) exceeding MassDEP R-TVs. At one sample location upon the first floor, Naphthalene was detected in excess of the R-TV. However, this sample location was near an area where cleaning products and paints are stored, and furthermore, Naphthalene is not considered a vapor intrusion COC as it has not been found in soil or groundwater.

SAGE is prepared, with Department approval, to move forward with the installation of a SSDS and post activation indoor air sampling to demonstrate its effectiveness but requests direction on how such work can commence, as it is our understanding direction could be provided once the SIR was submitted. SAGE has performed sub-slab diagnostic testing to estimate the SSDS design parameters including extraction point locations, fan sizing, flow rates, and radius of influence (ROI) projections. At present, SAGE estimates an adequate ROI over the targeted area of the basement where elevated soil gas concentration was found to require 3-4 extraction points with an operational flow rate of approximately 30 cubic feet per minute (CFM) at 25 inches of water (in W.C.). The resulting ROI from each extraction point is estimated to be approximately 40 feet with a target far-field sub-slab negative pressure of 0.012 in W.C.

The above data and estimates were collected during a diagnostic test performed on April 19, 2023. During the testing, SAGE cored one (1) temporary vacuum extraction points (VEP-1) through the building slab. The location of the temporary extraction point is depicted in **Figure 1**, attached. At VEP-1, a section of 2-inch-diameter, schedule 40 PVC pipe was connected to a portable vacuum. Additionally, several VaporPin sub-slab monitoring points (VP-1 through VP-6) were installed radially from VEP-1 to collect negative pressure data during the pilot test in order to estimate a radius of influence (ROI). The VaporPins were installed per the guidelines provided in **Appendix 1**, and their locations are depicted in **Figure 1**.

For the purposes of estimating an ROI, a minimum of 0.012 inches of water column was used as a threshold value at the soil gas points (level suggested in the MassDEP Vapor Intrusion Guidance).

To complete the pilot test, SAGE applied a vacuum pressure at each extraction point during which the following data was collected:

- Negative pressure at the extraction point;
- Negative pressure at sub-slab soil gas points using a digital manometer; and
- Flow rates using an anemometer.

In summary, three (3) test scenarios were conducted at the extraction point, the results of which are provided in **Appendix 2**. Based on the diagnostic testing results, an ROI of approximately 40 feet was estimated with an operational negative pressure of 25 in W.C. and flow rate of around 30 CFM.

Based upon the diagnostic test results, a full-scale system would include four (4) extraction points generally placed within the areas depicted in **Figure 2**. Note the target area of the SSDS is within the basement where elevated COCs have been found within soil gas and indoor air. Concentration isopleths for the soil gas and initial indoor air sampling have been depicted in **Figure 3**.

Each extraction point location would consist of a 2-foot-diameter sump excavated to a depth of approximately 2-feet below the base of the slab. Within each sump, a filter fabric-wrapped, 3-foot section of 3-inch schedule 40, 10-slot PVC would be installed. Next, the sump would be backfilled with ¾-inch crushed stone. From each extraction point stub, solid 3-inch, schedule 40 conveyance piping would be glued and run to the wall of the site building where it would then exit and run along the building exterior façade and connect to a Model HS5500 RadonAway extraction fan with its vent pipe extended above the roof line. A copy of the manufacturer specification sheet is provided in **Appendix 3**. The SSDS would also be outfitted with a Sensaphone Sentinel telemetry remote monitoring system capable of notifying SAGE and the property owner in the event of a power failure and/or pressure drop within the extraction lines.

One week after system startup, Indoor air sampling within the building basement and first through third floors would occur with a target of demonstrating compliance with MassDEP R-TVs for COCs (i.e. PCE, TCE, and Cis-1,2-DCE).

RIDEM Comment #2

Please submit a copy of the full Phase I Environmental Site Assessment (ASTM E152713) Report. As stated in an email dated May 1, 2023, to Sage, the Department is particularly interested in the interior and exterior inspection that would have been documented in the Phase I Report, noting areas of staining, sumps, floor drains, locations in the building where certain chemicals were used as part of historical operations, remaining machinery, stored/leftover chemicals, etc. The Phase I Report should summarize the recognized environmental conditions (RECs) that were identified.

SAGE Response:

The Phase I Environmental Site Assessment (ESA) has been provided as **Appendix 4**.

RIDEM Comment #3

The site figure labeled as “Figure 2” in Appendix C notes the locations of several features in and around the building such as a “sump-like structure,” “subgrade tank vault,” former and current locations of “OHM storage areas,” “oil-water separator and satellite drum,” area labeled “not accessible,” and “acid line.” However, the SIR does not indicate that any were investigated or discuss the possibility of any to be contributing to the indoor air quality issues in the building. Please investigate all potential sources of VOCs to determine if they are either serving as a preferential pathway for vapor intrusion into the building or are contributing VOC sources themselves.

SAGE Response:

These items are noted in the Phase I ESA of **Appendix 4**. Based upon the testing performed and described in the SIR, the noted ESA features have not been shown to be contributing sources, and SAGE believes the findings are from historical site manufacturing uses.

RIDEM Comment #4

The indoor air sampling conducted April 25, 2023, did not include the basement. The only indoor air sampling data for the basement level of the building that has been provided to the Department is now 18 months old, collected on December 20, 2021. Please conduct indoor sampling in the basement level of the building, particularly in the eastern side. Indoor air sampling of the basement shall be conducted via 24-hour Summa Canister collection and laboratory analyzed for VOCs via EPA Method TO-15.

SAGE Response:

As noted in Comment Response #1 above, the most recent testing performed was focused upon area where occupancy was currently being proposed as was discussed during the conference call. As such the basement was not retested. However, given the Department request, a round of indoor air sampling within the basement was performed over a 24-hour period beginning on May 22, 2023. During the assessment, two (2) certified-clean Summa cans were deployed in the basement (SE-IA-301 and SE-IA-302) and one (SE-AA-301) deployed outside the Site building to assess ambient background. Locations of the samples can be found in **Figure 3**. At the completion of the 24-hour sampling period the cans were retrieved and submitted to a certified laboratory for analysis of VOCs by EPA Method TO-15.

Results of the sampling identified CVOC COCs (identified as PCE, TCE, Cis-1,2-DCE, and VC) exceeding MassDEP R-TVs. At one sample (SE-IA-301), PCE was also identified above the MassDEP Commercial/Industrial Threshold Value (C/I-TV). The levels found appear consistent with the 100 Series indoor air samples and continue to be indicative of vapor intrusion based on the past and current data submitted herein. Results on summarized in Table 1 of the **Tables Appendix**. A copy of the laboratory analytical report is included as **Appendix 5**.

RIDEM Comment #5

If there is an HVAC system, please provide information pertaining to it. Is it operational? Can it be equipped with air purifying units? Are there any plans to turn it on?

SAGE Response:

There is an HVAC system and it is currently operational. Use of air purifying filters can be considered.

RIDEM Comment #6

Based on the PID screening in the boring logs, it appears unlikely that the low-level detections of VOCs in the groundwater are the source of the VOCs present in the indoor air and soil gas. The PID screening is reported to have only measured detection in the upper 0 – 4 feet below ground surface (bgs) range while screening closer to the groundwater table were non-detect.

SAGE Response:

SAGE does not suggest the levels of COCs in soil gas are attributable to groundwater. Given the findings in soil gas and lack of elevated groundwater concentrations, SAGE conducted further testing of sub-slab soils through its 200 Series borings to evaluate soil conditions in proximity to the slab. As noted in the SIR, soil samples collected from these borings contained detectable levels of COCs, which SAGE is of the opinion are the source of the sub-slab soil gas and indoor air directions. Please note the Method 1 Direct Exposure Criteria does not consider vapor partitioning and this is also consistent with the soil standards developed by the MassDEP. This condition is also explicitly noted in the MassDEP Vapor Intrusion Policy. As noted in the MassDEP Vapor Intrusion Policy,

The MCP (310 CMR 40.0942(1)(d)) states that “If one or more Volatile Organic compounds is present in the vadose zone soil adjacent to an occupied structure (within six feet, measured horizontally from the wall of the structure, and within ten feet, measured vertically from the basement floor or foundation slab) then the soil has the potential to result in significant indoor air concentrations of OHM and Method 1 alone cannot be used to characterize the risk at the disposal site.”

The concentrations of VOCs in soil at which the potential for vapor intrusion is likely to occur have not been established. The derivation of the MCP Method 1 Soil Standards did not consider the vapor intrusion pathway. In some cases, low concentrations of certain VOCs in soil below the Method 1 Soil Standards could result in an impact to the indoor air of an adjacent building. Consequently, Method 1 alone cannot be used to characterize disposal site risk where there is VOC contamination in soil in the vadose zone near a building. The potential for vapor intrusion must be evaluated if VOCs are detected in soil or soil gas within the distances specified in 310 CMR 40.0942(1)(d).

The above noted condition is further evidenced by the relationship between the presence of COCs within soil beneath the basement, the corresponding soil gas concentrations where COCs were found in soil, and the presence of COCs within indoor air within this area. Furthermore, the concentration isopleths between soil gas and indoor air show a qualitative connection, and these lines of evidence support that vapor intrusion is connected to volatile in soils beneath the building basement area that are entering the indoor air from soil gas.

RIDEM Comment #7

To date, the Site assessment, including the PID screening detections and the sub-slab soil gas data, has not identified a clear or distinct source to explain the VOCs detected in the indoor air. Please provide a detailed explanation as to the source of VOCs in indoor air and soil gas or what steps will be taken to determine the source. It is possible that a soil source not yet discovered may be present and/or the source could be a combination of chemical spills to the floor over the decades of manufacturing operations that have been absorbed into the building slab. Both scenarios can result in the sub-slab soil gas and indoor air impacts that exist now. Due to the reluctance to evaluate building materials as a potential contributing source of VOCs in the indoor air and the lack of information provided to the Department regarding the interior of the building, the Department does not have enough information to evaluate if the proposed remedial

alternative of a sub-slab depressurization system (SSDS) will be adequate to keep VOC concentrations in the indoor air below residential thresholds.

SAGE Response:

Based upon the data collected to date and the information provided herein, SAGE believes the source of vapor intrusion has been identified, and implementation of a SSDS within the basement area is an adequate and appropriate remedial measure. While SAGE understands and has considered the possibility of COCs from other contributing sources such as building materials, the data collected supports a connection to sub-slab vapor intrusion more than building materials. In cases where building materials or products could be a source, it is common for the COC concentration distribution to be sporadic and not predictable. For example, COC concentrations would be anomalously higher on upper floors or absent in the soil gas/basement and present on upper floors with no gradient-based relationship.

When considering the connection between sub-slab and indoor air, it is typical to employ a lines of evidence approach whereby sub-slab environmental media are sampled (including groundwater and soil) to first understand what COCs could have been released and what potential these media could pose to vapor intrusion. In either case, volatiles present in sub-slab soil gas can be attributed to whole or in part soil and/or groundwater. In the case of the subject site, groundwater does not appear to be a major contributing source to soil gas; however, this does not appear to be the case for soil. As noted in the SAGE response above to Comment #6, Direct Exposure Criteria for soil have not been developed to account for potential vapor intrusion, and this condition is noted in the MassDEP Vapor Intrusion Guidance whereby any detection of VOCs in soil beneath or near a building could result in a vapor intrusion condition.

When comparing the concentration gradients between soil, soil gas, and indoor air, a correlation can be seen. This comparison has been provided in **Figure 4**.

Based upon the evaluation performed, SAGE is of the opinion a SSDS within the basement area is an adequate and appropriate remedial measure.

RIDEM Comment #8

Please elaborate on Remedial Alternative 2. This alternative does not address the VOC contamination in the sub-slab soil gas or indoor air. Given that the building covers nearly the entire lot and those soils containing jurisdictional concentrations of VOCs has not been discovered, excavation of soils as a remedial alternative is not a complete remedy to list for consideration.

SAGE Response:

As noted in the evaluation, excavation of soils as a possible measure would be difficult to implement given the presence of the building and utilities. The remedy was provided as an option with the idea of excavating soils exceeding RIDEM Method 1 Residential Direct Exposure Criteria (R-DEC) but also those contributing to soil gas and vapor intrusion to indoor air.

However, in either case, removal of soils as a remedial measure is limited and not reliable in this situation. As such, SAGE considers such a measure infeasible and provided its recommendations for addressing vapor intrusion (as opined from a soil source) be controlled by an SSDS and direct exposure to be controlled *via* a cap.

RIDEM Comment #9

Please submit a SIR Addendum that addresses the abovementioned comments on or before June 15, 2023.

SAGE Response:

The subject letter has been provided as the SIR Addendum.

Should you have any questions or require additional information, please do not hesitate to contact the undersigned.

Sincerely,
SAGE Environmental, Inc.

Jacob H. Butterworth

APPENDIX 1

Standard Operating Procedure Installation and Extraction of the Vapor Pin®

Updated September 9, 2016

Scope:

This standard operating procedure describes the installation and extraction of the VAPOR PIN® for use in sub-slab soil-gas sampling.

Purpose:

The purpose of this procedure is to assure good quality control in field operations and uniformity between field personnel in the use of the VAPOR PIN® for the collection of sub-slab soil-gas samples or pressure readings.

Equipment Needed:

- Assembled VAPOR PIN® [VAPOR PIN® and silicone sleeve(Figure 1)]; Because of sharp edges, gloves are recommended for sleeve installation;
- Hammer drill;
- 5/8-inch (16mm) diameter hammer bit (hole must be 5/8-inch (16mm) diameter to ensure seal. It is recommended that you use the drill guide). (Hilti™ TE-YX 5/8" x 22" (400 mm) #00206514 or equivalent);
- 1½-inch (38mm) diameter hammer bit (Hilti™ TE-YX 1½" x 23" #00293032 or equivalent) for flush mount applications;
- ¾-inch (19mm) diameter bottle brush;
- Wet/Dry vacuum with HEPA filter (optional);
- VAPOR PIN® installation/extraction tool;
- Dead blow hammer;
- VAPOR PIN® flush mount cover, if desired;
- VAPOR PIN® drilling guide, if desired;

- VAPOR PIN® protective cap; and
- VOC-free hole patching material (hydraulic cement) and putty knife or trowel for repairing the hole following the extraction of the VAPOR PIN®.

Figure 1. Assembled VAPOR PIN®

Installation Procedure:

- 1) Check for buried obstacles (pipes, electrical lines, etc.) prior to proceeding.
- 2) Set up wet/dry vacuum to collect drill cuttings.
- 3) If a flush mount installation is required, drill a 1½-inch (38mm) diameter hole at least 1¾-inches (45mm) into the slab. Use of a VAPOR PIN® drilling guide is recommended.
- 4) Drill a 5/8-inch (16mm) diameter hole through the slab and approximately 1-inch (25mm) into the underlying soil to form a void. Hole must be 5/8-inch (16mm) in diameter to ensure seal. It is recommended that you use the drill guide.

VAPOR PIN® protected under US Patent # 8,220,347 B2, US 9,291,531 B2 and other patents pending

- 5) Remove the drill bit, brush the hole with the bottle brush, and remove the loose cuttings with the vacuum.
- 6) Place the lower end of VAPOR PIN® assembly into the drilled hole. Place the small hole located in the handle of the installation/extraction tool over the vapor pin to protect the barb fitting, and tap the vapor pin into place using a dead blow hammer (Figure 2). Make sure the installation/extraction tool is aligned parallel to the vapor pin to avoid damaging the barb fitting.

Figure 2. Installing the VAPOR PIN®

During installation, the silicone sleeve will form a slight bulge between the slab and the VAPOR PIN® shoulder. Place the protective cap on VAPOR PIN® to prevent vapor loss prior to sampling (Figure 3).

Figure 3. Installed VAPOR PIN®

- 7) For flush mount installations, cover the vapor pin with a flush mount cover, using either the plastic cover or the optional stainless-steel Secure Cover (Figure 4).

Figure 4. Secure Cover Installed

- 8) Allow 20 minutes or more (consult applicable guidance for your situation) for the sub-slab soil-gas conditions to re-equilibrate prior to sampling.
- 9) Remove protective cap and connect sample tubing to the barb fitting of the VAPOR PIN®. This connection can be made using a short piece of Tygon™ tubing to join the VAPOR PIN® with the Nylaflo tubing (Figure 5). Put the

Nylaflow tubing as close to the VAPOR PIN® as possible to minimize contact between soil gas and Tygon™ tubing.

Figure 5. VAPOR PIN® sample connection

10) Conduct leak tests in accordance with applicable guidance. If the method of leak testing is not specified, an alternative can be the use of a water dam and vacuum pump, as described in SOP Leak Testing the VAPOR PIN® via Mechanical Means (Figure 6). For flush-mount installations, distilled water can be poured directly into the 1 1/2 inch (38mm) hole.

Figure 6. Water dam used for leak detection

11) Collect sub-slab soil gas sample or pressure reading. When finished, replace the protective cap and flush mount cover

until the next event. If the sampling is complete, extract the VAPOR PIN®.

Extraction Procedure:

- 1) Remove the protective cap, and thread the installation/extraction tool onto the barrel of the VAPOR PIN® (Figure 7). Turn the tool clockwise continuously, don't stop turning, the VAPOR PIN® will feed into the bottom of the installation/extraction tool and will extract from the hole like a wine cork, DO NOT PULL.
- 2) Fill the void with hydraulic cement and smooth with a trowel or putty knife.

Figure 7. Removing the VAPOR PIN®

- Prior to reuse, remove the silicone sleeve and protective cap and discard. Decontaminate the VAPOR PIN® in a hot water and Alconox® wash, then heat in an oven to a temperature of 265° F (130° C) for 15 to 30 minutes. For both steps, STAINLESS – ½ hour, BRASS 8 minutes
- 3) Replacement parts and supplies are available online.

| HIGH | 40" WC | 527-625 |
| MAX | 50" WC | 591-632 |

APPENDIX 3

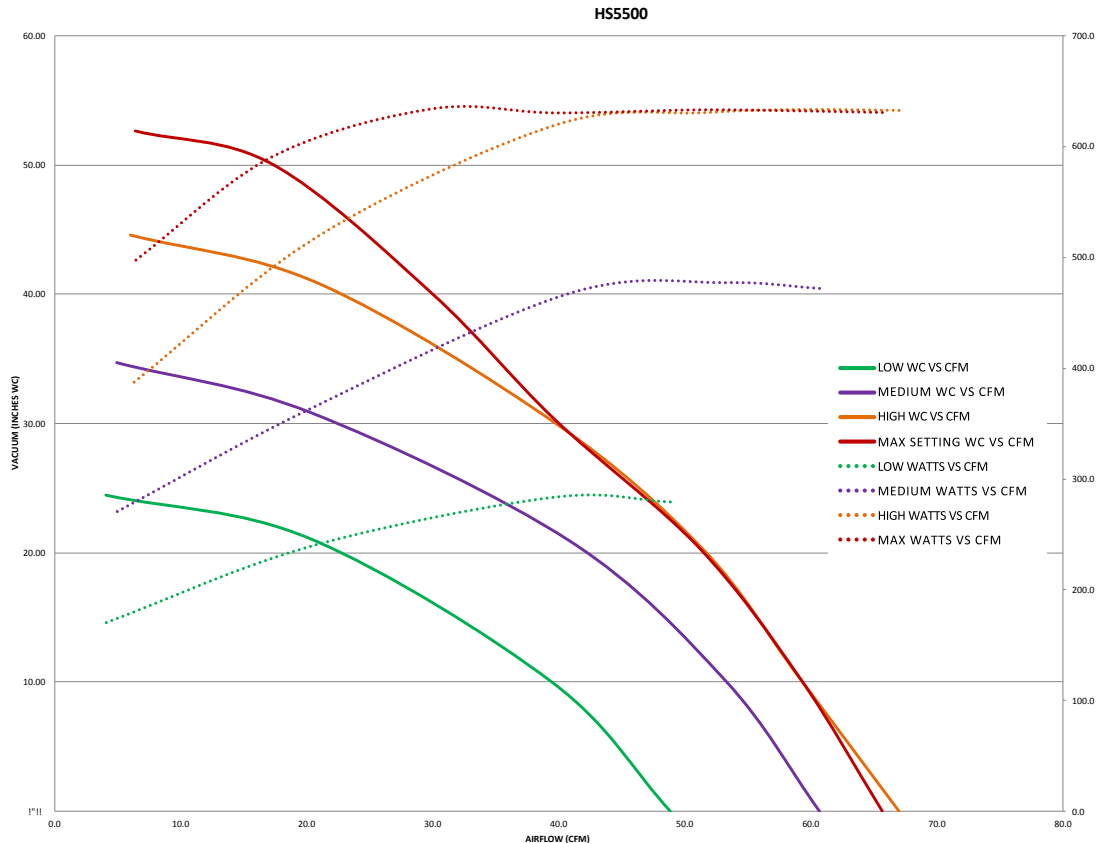

HS5500

RadonAway's new HS5500 is an ETL-listed high pressure blower that has been designed with the professional in mind. The HS5500 features multiple speed settings to meet site-specific pressures and air flows easily verified by a built in pressure gauge in the front cover of the unit. These blower units have a new electrical box design with a wire terminal strip along with two flexible pipe couplings for quick and easy site installation.

HS5500 FEATURES

- 4 Blower Speed Settings
- Integrated Condensate Bypass
- Designed for Easy Motor Replacement
- ETL Listed
- Built-in 60" Vacuum Gauge
- Quiet Operation
- 4-Stage Blower Designed for Harsh Environmental Conditions

| SPEED SETTING | MAX RECOMMENDED OPERATING VACUUM | MAX OPERATING RANGE WATTS |
|---------------|----------------------------------|---------------------------|
| LOW | 20" WC | 243-281 |
| MEDIUM | 30" WC | 372-477 |
| HIGH | 40" WC | 527-625 |
| MAX | 50" WC | 591-632 |

EXECUTIVE SUMMARY

This report presents the findings of a Phase I Environmental Site Assessment (ESA) conducted by SAGE Environmental, Inc. (SAGE) of one (1) parcel addressed as 1144 Eddy Street in Providence, Rhode Island (Assessor's Plat 57, Lot 291) (hereinafter, "Site"). This Phase I ESA was performed in conformance with the scope and limitations of the American Society for Testing and Materials (ASTM) Designation E1527-13: *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* and the United States Environmental Protection Agency's (U.S. EPA's) All Appropriate Inquiries (AAI) Rule under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), 40 CFR § 312 (2005). Any exceptions to or deletions from this practice are described in **Section 1.6** of this report titled "Deviations."

SAGE has performed a Phase I ESA of the Site in general conformance with the scope and limitations of ASTM Practice E1527-13 and the EPA's AAI Rule and those exceptions identified in this report. Based on the information further described herein, it is the opinion of SAGE that a Limited Subsurface Investigation (LSI) be conducted to evaluate the identified Recognized Environmental Conditions (RECs). The LSI would include a general evaluation of Site soils as well as groundwater, and given the current understanding that the Site may be considered for a school, SAGE recommends as part of the LSI, a sub-slab soil gas assessment be performed. Additional focused areas of exploration as part of the LSI would include the subgrade infrastructure that appears to be associated with a former steam heating system, located on the southern side of the Site structure, and the visually stained surface in proximity to a transformer located within the transformer room.

Furthermore, although outside the scope of this Phase I ESA, SAGE recommends that all oil and/or hazardous materials (OHM) containers be properly labeled and stored, and waste disposal documentation be maintained on the premises.

The following table summarizes the conclusions of this Phase I ESA and should be reviewed in conjunction with the entire report.

| | |
|--|--|
| Plat/Lot | Assessor's Plat 57, Lot 291 |
| Site Area | 0.39 of an acre. |
| Current Site Usage | The Site is currently unoccupied. |
| Historical Site Usage/ Research Notes | Information reviewed to evaluate historical Site use included that maintained by City offices as well as historical aerial photographs, Sanborn Fire Insurance Maps, the Rhode Island State Map Atlas of 1870, and historical City directories. These resources indicate that in 1870, the Site was part of a park which extended from Eddy Street to the Providence River. According to the City of Providence Assessor's Card, the Site building was erected in 1925. In 1937, the existing Site building was referred to as the Farnham Building, presumably after the owner, Frank Farnham who owned the Site from 1924 through 1943. By 1938, the Site was occupied by the Jewelers Supply Company, and the Federal Products Corporation. Between 1944 and 2017, Site occupants have included the Federal Products Corporation (numerous name variations), Auxitrol-USA, the Bayside Federal Credit Union, and most recently, Mahr Federal Inc and Mahr, Inc. |

| | |
|------------------------------------|--|
| | The Federal Products Corporation's operations comprised numerous parcels of land, and the Site has been identified by as Plant 1. Federal Products Corporation was a manufacturer of precision machining measuring devices. By 1994, the Site was utilized for administrative purposes. At the time of the Site Walkover, the Site building was no longer occupied. |
| Zoning | M-2 (General Industrial District): Per the City of Providence, the M-2 General Industrial District is intended to provide areas for moderate and heavy intensity industrial uses, especially for those uses that are potentially hazardous, noxious, or incompatible with the uses in other districts. |
| Site Access | The Site is accessible <i>via</i> Eddy Street, Ernest Street and Cass Street. |
| Structure Description | The Site building is an approximate 40, 674-square foot, three (3) story structure, brick, and concrete constructed building. The western portion of the building is reportedly built slab-on-grade, and the eastern portion includes basement. |
| Year Built | Per the City of Providence Assessor's Card, the Site building was constructed in 1925. |
| Site Surfaces | The Site consists of the building footprint, concrete, asphalt, and landscaped areas. A chain-linked fence is located on the northwest and south side of the building. |
| Sanitary Sewer | Based on information obtained from the City of Providence Public Works Department, sanitary sewer enters the Site building from Ernest Street. The initial connection is reported to be June 22, 1928. At this time it is unknown how sanitary waste or potential discharge from business operations was managed between 1925, when the building was constructed, and the connection to municipal sewer in 1928. |
| Heating Source | Based on information obtained from the Site Facility Manager, the Site is connected to natural gas. A natural gas meter was not observed on the day of the Site Walkover; however, the Site Facility Manager stated that it is located in the basement, near the stairwell. |
| Water | The Site is serviced by the City of Providence Water Department. According to the Providence Water Department, the Site is serviced by one (1) six (6)-inch cast iron fire service water line and one (1) four (4)-inch cast iron service line. Both lines originate in Ernest Street and enter the approximate center of the building. The service line was reportedly connected on March 5, 1928, and the fire service line was reportedly connected on June 19, 1928. |
| Use of Adjoining Properties | <p>Adjoining properties include:</p> <ul style="list-style-type: none"> ➤ A public right-of-way (Ernest Street) is located to the north, followed by an industrial property owned by Motiva Enterprises LLC. The property includes vacant buildings, and a bulk fuel storage facility; ➤ A public right-of-way (Cass Street) is located to the south, followed by an industrial property owned by the Narragansett Electric Company; ➤ A public right-of-way (Eddy Street) is located to the west, followed by a commercial and industrial property owned by the Federal Products Corporation (Mahr, Inc.); and, ➤ The intersection of Ernest Street and Cass Street is located to the east. Beyond the intersection is commercial and industrial land, including but not limited to the land owned by Motiva Enterprises LLC, and operated as a bulk fuel storage facility. |
| Groundwater Classification | GB, which is defined as groundwater that is presumed not suitable for use as a public or private drinking water supply without prior treatment. |
| State & Federal | A public records search was conducted by SAGE through an Environmental Data Resources, |

| Records Notes | |
|---------------|---|
| | <p>Inc. (EDR) FirstSearch Report. The Site is listed in the Facility Index System (FINDS) database, the Spills database, the US Airs database, and the Potentially Responsible Party (PRP)* database; however, at this time, the inclusion in these databases appear to be associated with the Federal Products/Mahr facility located at 1139 Eddy Street, and/or off-Site locations. Historically, the Site generated hazardous waste; however, the waste streams were merged with those generated at 1139 Eddy Street; therefore, it is unknown which waste streams were generated at the Site.</p> <p><i>*Please note that the Site is listed as a PRP for three (3) Superfund Sites, including Cannon Engineering Corporation located on First Street in Bridgewater, Massachusetts (MAD079510780), Landfill & Resource Recovery, Inc, located on Oxford Road in North Smithfield, Rhode Island (RID093212439), and Plymouth Harbor/Cannon Engineering Corporation, located in Cordage Park in Plymouth, Massachusetts (MAD980525232).</i></p> <p>The EDR Report identified the following properties within a 1/3 of a mile radius for non-petroleum contaminated properties and within 1/10 of a mile for petroleum contaminated properties. Due to the number of listings, the following are excluded from the list below:</p> <ul style="list-style-type: none">➤ Non-abutting properties which are reported to be in a downgradient topographic and/or presumed downgradient hydrogeologic direction;➤ Properties which are located greater than 500 feet from the Site and are presumed to be located in a crossgradient topographic and/or hydrogeologic direction; and,➤ Non-abutting properties that are registered as Resource Conservation and Recovery Act (RCRA) Generators and are not listed in additional databases of concern to this Site. <p>Groundwater flow direction, on the portion of the Shell-branded terminal (i.e., Motiva Enterprises), located immediately north of the Site is documented to flow in a north northeasterly direction. Due to the local topography, proximity to the Providence River to the east, and numerous lakes to the southwest (i.e., Polo Lake, Pleasure Lake, Roosevelt Lake, Edgewood Lake, Cunliffe Lake, and an unnamed surface water body), the actual groundwater flow direction as you move away from the Site may vary. As part of this assessment, it is assumed that the localized groundwater for the Site is in a north northeasterly direction.</p> <ul style="list-style-type: none">➤ USTs<ul style="list-style-type: none">○ Crisloid Plastics Inc., 55 Porter St., Providence, RI;○ MAHR Federal Inc. A review of Rhode Island Department of Environmental Management (RIDEM) files documented a release at the National Grid Field’s Point Substation, located south of the Site, across Cass Street, which resulted in polychlorinated biphenyl (PCB) and total petroleum hydrocarbons (TPH) contaminated soil. Remedial actions completed included the excavation and off-site disposal of 168.85 tons of impacted soil. The post-excavation soil samples documented the presence of residually impacted TPH soil [14,400 milligrams per kilogram (mg/kg)] which exceeded the RIDEM Residential Direct Exposure Criteria (R-DEC) of 500 mg/kg and the Industrial Commercial Direct Exposure Criteria (I/C-DEC) of 2,500 mg/kg, and PCB impacted soil (4 mg/kg) which was reported to be less than the applicable RIDEM R-DEC and I/C-DEC of 10 mg/kg. No additional excavations were completed in the area of the TPH contamination due to structural concerns. The vertical and horizontal extent of TPH contaminated soil was not delineated, and an assessment of groundwater was not completed. The area of the TPH contaminated soil is located approximately 45 to 55 feet south of the Site boundary. Therefore, based on the location of the TPH release area (45 to 55 feet south of the Site), and the local documented groundwater flow direction in a northeasterly direction, it is possible the release noted at this location could have impacted

| | |
|-----------------------------------|---|
| | <p>the Site.</p> <p>Further information is provided in Section 4.1.</p> |
| <p>Site Walkover Notes</p> | <p><u>Interior Site Walkover Notes</u></p> <p>Mahr Inc. (Mahr) recently utilized the Site building for administrative and product demonstration purposes. As part of business operation consolidation, Mahr relocated their operations to an off-Site location. At the time of the Site walkover, Mahr personnel were no longer occupying the building; however, demonstration equipment, office furniture and files were still located within the building. Due to the presence of a locked interior fenced-in area, utilized for the storage of accounting records, the northeast portion of the basement could not be visually observed. In addition, the passenger elevator pit was not accessible on the day of the Site Walkover. A summary of notable Site conditions visually observed on the day of the Site Walkover is provided below.</p> <p><u>Basement:</u></p> <ul style="list-style-type: none"> ➤ The basement includes a water treatment room, a utility area (i.e., compressor, boiler, hot water maker, electric meter, and electrical infrastructure including two (2) floor-mounted dry transformers, one (1) floor-mounted unlabeled transformer which is presumed to be dry, and an OHM storage area), general non-OHM storage areas, an interior fenced-in area utilized for the storage of accounting records, and access to an exterior utility area. ➤ Floor drains, and cleanouts, were observed throughout the basement. The floor drains are reportedly connected to the municipal sewer. ➤ Relic piping was located throughout. The Mahr Facility Manager did not have any historical plans for the Site when it was operated as “Plant 1” of Federal Products Corporations manufacturing facility. ➤ OHM observed within the utility area, includes, but is not limited to: <ul style="list-style-type: none"> ○ An unknown red substance in an unlabeled glass jar. No release of OHM was observed; ○ Six (6) five(5)-gallon plastic buckets with varying quantities of OHM. No release of OHM was observed; ○ One (1) parts washer-degreaser and associated 55-gallon steel drum. No release of OHM was observed; ○ One (1) 55-gallon steel drum in an overpack drum (Blaser Swisslube). OHM was observed in the base of the overpack drum. No release of OHM from the overpack drum was observed; ○ One (1) Kaeser Compressor oil/water separator (OWS) and associated oil storage container. OHM was observed on the concrete floor, at the base of the OWS. A floor drain, reportedly connected to the municipal sewer, was adjacent to this area. According to the Site’s Facility Manager, water from the OWS is discharged to the floor drain, and the oil is transferred to a 55-gallon steel satellite drum while awaiting off-Site disposal. Staining was observed around the floor drain; and, ○ One (1) 55-gallon steel satellite drum for the storage of waste compressor oil. The base of the drum had visible evidence of rust, and OHM staining was visible on the concrete floor. |

First Floor:

- The first floor includes a former product demonstration area, vacant areas that appeared to be historically utilized for manufacturing purposes, storage areas, restrooms, a loading dock, and a former OHM storage area.
- The loading dock is located on the north side of the Site. According to the Site's Facility Manager, the loading dock utilizes hydraulics. At the time of the Site Walkover, the equipment associated with the loading dock was non-operational; therefore, and visual observation of the hydraulic system could not be completed.
- The former OHM storage area is located on the north side of the building. The floor and berm are constructed of concrete and appeared to be competent. Staining was visible; however, due to the condition of the concrete, a release of OHM to the environment was not apparent. A small capacity spill containment grated structure was located adjacent to the OHM storage area. At the time of the Site Walkover, the structure was utilized for the storage of two (2) bags of calcium chloride ice melt, a 1.25-gallon container of Roundup Max Control 365, and a one (1)-gallon container of Alki-Foam.
- Various chemicals were observed throughout the first floor including, but not limited to, one (1)-gallon container of Pure Bright Germicidal Ultra Bleach, Liquid-Plumber, and Windex.
- Vents were located throughout, and reportedly associated with dust and particulate collection. Select vents connect to a filtration system, located on the south side of the building.
- Water stains were visible on select ceiling tiles.
- Floor drains were observed within the restrooms, which are reportedly connected to the municipal sewer.
- One (1) mop sink was observed. No OHM staining was apparent.
- The eastern stairwell contained at least one (1) Sola Constant Wattage Ballast. No evidence of a release of OHM was observed.
- Relic piping was located throughout. The Mahr Facility Manager did not have any historical plans for the Site when it was operated as "Plant 1" of Federal Products Corporations manufacturing facility.

Second Floor:

- The second floor includes an open area, cubicles, a former IT room, a break room, offices, storage areas, and restrooms.
- Floor drains were observed within the restrooms, which are reportedly connected to the municipal sewer.
- One (1) utility sink was observed. The utility sink was stained; however, it is reportedly connected to the municipal sewer.
- Water stains were visible on select ceiling tiles.
- Various chemicals were observed throughout the second floor including, but not limited to, one (1)-gallon container of Clorox Bleach, Bio Renewables Glass Cleaner, miscellaneous janitorial supplies, and an open container labeled as Simple Green.
- Relic piping was located throughout. The Mahr Facility Manager did not have any historical plans for the Site when it was operated as "Plant 1" of Federal Products Corporations manufacturing facility.

| | |
|--|---|
| | <p><u>Third Floor:</u></p> <ul style="list-style-type: none">➤ The third floor includes a server room, storage areas, office space, and restrooms.➤ Floor drains were observed within the restrooms, which are reportedly connected to the municipal sewer. <p><u>Penthouse:</u></p> <ul style="list-style-type: none">➤ The penthouse is located on the eastern portion of the Site building and was utilized as a meeting room. The penthouse provides access to the roof. <p><u>Roof:</u></p> <ul style="list-style-type: none">➤ The roof is constructed of membrane. The western portion of the roof is enclosed within a chain-linked perimeter fence.➤ Rooftop gas-fired heating, ventilation, and air conditioning (HVAC) units are located on the roof. <p><u>Passenger Elevator:</u></p> <ul style="list-style-type: none">➤ A passenger elevator is located on the western side of the Site building. Access to the elevator pit was not provided on the day of the Site Walkover.➤ The machine room, located above the elevator, was accessible. Minor OHM staining was observed on the floor. Absorbent pads were located adjacent to the equipment and had minor OHM staining. No active leaks of OHM were observed.➤ One (1) quart of Formula Shell SAE 10W-30 Motor Oil was located in the machine room.➤ A review of the Electric Elevator Inspection Checklists documented that the most recent inspection occurred on August 20, 2020. No deficiencies were noted. <p><u>Freight Elevator:</u></p> <ul style="list-style-type: none">➤ A freight elevator is located in the central portion of the Site building.➤ A review of the Electric Elevator Checklist documented that the most recent inspection occurred on August 20, 2020. No deficiencies were noted.➤ The machine room, located above the elevator, was accessible. No active leaks of OHM were observed.➤ Staining was visible in the elevator pit. Physical access to the pit was not provided; therefore, construction details and condition of the pit floor are unknown (i.e., earthen/concrete floor, competent/degraded, etc.). <p><u>Transformer Room:</u></p> <ul style="list-style-type: none">➤ A concrete constructed transformer room was accessible through the southern fenced-in area. The room is located beneath the portion of the Site building that is reportedly built slab-on-grade.➤ Three (3) 100 kilovolt-ampere (kVA) transformers were located within this room. Each transformer was labeled as "Filled at the time of manufacture with non-PCB (less than 1 ppm) dielectric fluid".➤ One (1) transformer had visible staining around the upper rim and down the exterior. The concrete floor was competent in the area of the transformer. <p><u>Exterior Site Walkover Notes</u></p> <p>During the exterior walkover, SAGE noted an access way which leads to a sub-grade vault</p> |
|--|---|

| | |
|--------------------------|--|
| | <p>containing infrastructure which appeared to be associated with a former steam heating system. Due to access constraints, visual observation was limited from the ground level. According to Mahr’s Site Facility Manager, this vault is classified as a Confined Space, and access was prohibited. A summary of notable Site conditions visually observed on the day of the Site Walkover are provided below.</p> <ul style="list-style-type: none"> ➤ A fenced in area, located on the south side of the Site building, was accessible from the basement. This area contained compressor units, an air filtration unit and associated plastic container to store condensate [approximate fifteen (15)-gallon capacity], access to a transformer room, access to a sub-grade vault through a wooden bulkhead, drainage grates, and a sub-grade sump-like vault containing relic infrastructure and water. ➤ Staining was observed on the exterior of the approximate fifteen (15)-gallon capacity plastic container which is used to store condensate. ➤ The sub-grade vault was accessible through a wooden bulkhead. According to the Site’s Facility Manager, the vault is classified as a Confined Space, and access was prohibited due to safety concerns. At the time of the Site Walkover, the Facility Manager was unaware that this vault existed; therefore, no details about the historical usage is known. The vault contained infrastructure that appears to be associated with a former steam heating system. A site gauge, valves, and metal piping were visible. Piping was observed to exit this sub-grade vault and head in the direction of the sub-grade sump-like vault which contained relic infrastructure and water. ➤ An American Standard natural gas forced air furnace with cooling unit, and one (1) thirty (30)-yard roll-off dumpster, are located on the northern side of the Site building. ➤ The loading dock is accessible on the north side of the Site building. ➤ Overhead lines connect to the southwest side of the building. ➤ A capped pipe was located on the northwest corner of the Site. Per the Mahr Facilities Manager, this pipe is a former fencepost. |
| <p>Deviations</p> | <p>The lien search required by Section 312.25 of the AAI Rule was not performed during the course of this assessment. During the local records review, a cursory search for environmental liens was conducted; however, such information was not found and/or provided by the User. Please note this review is limited and is not intended to suffice a full search or a level of diligence commensurate with a title company. If such detailed evaluation is required, this service can be provided outside of the subject scope.</p> |

ASTM E1527-13 DEFINITIONS OF A RECOGNIZED ENVIRONMENTAL CONDITION (REC), CONTROLLED REC (CREC), AND HISTORICAL REC (HREC)

A Recognized Environmental Condition (REC) is defined by the ASTM Standard Practice E1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

Other forms of RECs evaluated as part of this assessment include Historical REC (HRECs) and Controlled REC (CRECs). HRECs are past releases of any hazardous substances or petroleum products that occurred

in connection with the property and have been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). CRECs are past releases of *hazardous substances* or *petroleum products* that have been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls (for example, *property use restrictions, activity and use limitations, institutional controls, or engineering controls*).

FINDINGS

The following summarizes key findings of the Phase I ESA based on observations during the Site walkover, review of existing historical resources, and interviews with current or past owners. Included in the summary are known or suspected RECs, CRECs, HRECs and *de minimis* conditions.

Suspected RECs and *de minimis* conditions at the Site:

- Floor Drains are located throughout the Site building;
- A Kaeser Compressor OWS was observed in the basement of the Site building. OHM was observed on the concrete floor, at the base of the OWS;
- A 55-gallon steel satellite drum, utilized for the storage of waste compressor oil is located in the basement of the Site building. The base of the drum had visible evidence of rust, and OHM staining was visible on the concrete floor;
- OHM is stored in the basement of the Site building, including, but not limited to, a 55-gallon metal drum located within an overpack drum, six (6) five (5)-gallon plastic buckets with varying quantities of OHM, one (1) parts washer-degreaser and associated 55-gallon steel drum, and an unlabeled glass jar containing an unknown red substance;
- The former OHM storage area is located on the north side of the Site building, adjacent to the overhead door;
- Staining was visible in the freight elevator pit;
- A 100 kVA transformer, located within the Site building, was observed to have staining around the upper rim and down the exterior;
- Staining was observed on the exterior of the approximate fifteen (15)-gallon capacity plastic container which is used to store condensate;
- Subgrade Infrastructure which appeared to be associated with a former steam heating system. This subgrade infrastructure is located on the south side of the Site building, within the fenced-in area. Relic piping was observed to lead from this area to a sub-grade sump-like structure which contained water;
- The Site has been utilized for manufacturing of precision machining measuring devices since at least 1938 through the early 1990's, and photo chemical operations from an unknown date through 1990. In addition to manufacturing, the Site was occupied by Jewelers Supply Company. The Site is listed in the FINDS, Spills, PRP and US Airs database;
- The Site is located within an industrialized area of Providence, with documented land filling;

- The National Grid Fields Point Substation, located south of the Site, across Cass Street, had a release of PCBs and TPH in 1994; and,
- A capped metal pipe was observed in the landscaping, located on the northwest side of the Site, at the intersection of Eddy Street and Ernest Street.

ASTM E2600-15 VAPOR ENCROACHMENT SCREEN

During this assessment, SAGE also conducted a Vapor Encroachment Screen (VES) via ASTM E2600-15. Based upon the results of the Tier I Screening, SAGE has determined a Vapor Encroachment Condition (VEC) exists based on the historical usage of the Site as a manufacturing facility since at least 1938, the proximity of the release at the National Grid Field's Point Substation, located immediately south of the Site, and the Sites location within an industrialized area.

OPINIONS

Based upon the results of this assessment and the ASTM E1527-13 definitions of a REC, HREC, and CREC, the following opinions have been developed by SAGE along with a rationale for such determinations.

Non-REC Findings:

- **Floor Drains:** Floor Drains are located throughout the Site building. Reportedly all floor drains are connected to the municipal sewer; therefore, the presence of these floor drains do not represent a REC at this time. According to the Site Facility Manager, the discharge to the municipal sewer
- **Capped Metal Pipe:** A threaded capped metal pipe was observed in the landscaped area, on the northwest portion of the Site, at the intersection of Eddy Street and Ernest Street. Per the Mahr Facilities Manager, this capped metal pipe is an old fencepost, and not associated with a UST.
- **OHM Storage Area in the Basement:** OHM is stored in the basement of the Site building, including, but not limited to, a 55-gallon metal drum located within an overpack drum, six (6) five (5)-gallon plastic buckets with varying quantities of OHM, one (1) parts washer-degreaser and associated 55-gallon steel drum, and an unlabeled glass jar containing an unknown red substance. No release to the environment was observed; however, product was visible at the base of the overpack drum, and select five (5) gallon buckets did not have lids. SAGE recommends that the waste OHM be properly containerized, labeled, and properly disposed.
- **Former OHM Storage Area:** The former OHM storage area is located on the north side of the building. The floor and berm are constructed of concrete and appeared to be competent. Staining was visible; however, due to the condition of the concrete, a release of OHM to the environment was not apparent. A small capacity spill containment grated structure was located adjacent to the OHM storage area. At the time of the Site Walkover, the structure was utilized for the storage of two (2) bags of calcium chloride ice melt, 1.25-gallon container of Roundup Max Control 365, and a one (1)-gallon container of Alki-Foam.

REC Findings:

- **Oil/Water Separator:** A Kaeser Compressor OWS and associated oil storage container are located

in the basement of the Site building. The OWS is utilized to manage waste generated by the compressor. OHM was observed on the concrete floor, at the base of the OWS. A floor drain, reportedly connected to the municipal sewer, was adjacent to this area. According to the Site's Facility Manager, water from the OWS is discharged to the floor drain, and the oil is transferred to a 55-gallon steel satellite drum while awaiting off-Site disposal. Staining was observed around the floor drain. At this time, the condition of the underground piping associated with the floor drain is unknown. According to the Manager of HSEQ at Mahr, effluent samples are collected from the OWS, in accordance with their Narragansett Bay Commission Permit. Effluent sampling occurs twice a year in April and October; however, due to COVID-19, and lack of activity at the Site, the last effluent sample was collected in October of 2019. Based on the laboratory analytical report, the concentration of oil and grease from the OWS was 139 mg/l. A copy of the permit and associated discharge limits were not provided.

- **Satellite Drum:** A 55-gallon steel satellite drum, utilized for the storage of waste compressor oil is located in the basement of the Site building. The base of the drum had visible evidence of rust, and OHM staining was visible on the concrete floor. The satellite drum is located in proximity to a floor drain, which reportedly discharges to the municipal sewer. At this time, the condition of the underground piping associated with the floor drain is unknown.
- **Freight Elevator:** Staining was visible in the freight elevator pit. Physical access to the pit was not provided; therefore, the condition of the pit floor is unknown (i.e., competent/degraded, etc.).
- **Transformer:** A concrete constructed transformer room is located on the southern side of the Site building. Three (3) 100 kVA transformers were located within this room. At the time of the Site Walkover, one (1) transformer had visible staining around the upper rim and down the exterior. The concrete floor was competent in the area of the transformer. The transformers are labeled as containing non-PCB (less than 1 ppm) dielectric fluid. Although evidence of a release to the environment was not observed, the condition/competency of the transformer is unknown and represents a REC.
- **Air Filtration Condensate Collection Container:** Staining was observed on the exterior of the approximate fifteen (15)-gallon capacity plastic container which is used to store condensate. The integrity of this container is unknown and located adjacent to a stormwater drainage grate. This represents a REC.
- **Sub-Grade Vault and Exterior Sump-Like Structure:** Subgrade infrastructure which appeared to be associated with a former steam heating system, was observed on the southern side of the Site building, within the fenced-in area. Relic piping was observed to lead from this area to a sub-grade sump-like structure which contained water;
- **Historical Usage of the Site:** The Site has been utilized for the manufacturing of precision machining measuring devices since at least 1938 through the early 1990's, photo chemical operations from an unknown date through 1990, and occupied by the Jewelers Supply Company in 1938. Historically, the Site generated hazardous waste; however, the waste streams were merged with those generated at 1139 Eddy Street; therefore, at this time, it is unknown which waste streams were generated at the Site. Limited information exists regarding the historical layout of the Site building, and associated manufacturing infrastructure. The Mahr Facility Manager did not have any historical plans for the Site when it was operated as "Plant 1" of Federal Products Corporations manufacturing facility; however, an "acid line" is depicted on a document provided by the City of Providence Public Works Department. No additional information about

this acid line was obtained during the course of this assessment (i.e., holding tank, discharge location, etc.). The Site is listed in the FINDS, Spills, PRP and US Airs database; however, at this time, the inclusion in these databases appear to be associated with the Federal Products Corporation/Mahr facility located at 1139 Eddy Street, and/or off-Site locations. The usage of the Site for manufacturing represents a REC.

- **National Grid – Field’s Point Substation:** On September 30, 1994, RIDEM was verbally notified that staining that was observed on concrete foundations that supported oil-filled electrical equipment. Subsequent soil sampling documented the presence of PCB and TPH contaminated soil in excess of the applicable RIDEM DECs. Remedial actions completed included the excavation and off-site disposal of 168.85 tons of impacted soil. The post-excavation soil samples documented the presence of residually impacted TPH soil (14,400 mg/kg) which exceeded the RIDEM R-DEC of 500 mg/kg and the I/C-DEC of 2,500 mg/kg, and PCB impacted soil (4 mg/kg) which was reported to be less than the applicable RIDEM R-DEC and I/C-DEC of 10 mg/kg. No additional excavations were completed in the area of the TPH contamination due to structural concerns. The vertical and horizontal extent of TPH contaminated soil was not delineated, and an assessment of groundwater was not completed. The area of the TPH contaminated soil is located approximately 45 to 55 feet south of the Site boundary. Therefore, based on the location of the TPH release area (45 to 55 feet south of the Site), and the local documented groundwater flow direction in a northeasterly direction, it is possible the release noted at this location could have impacted the Site. **Surrounding Site Usage:** The Site is located within an industrialized area of Providence, with documented land filling. Local land usage documented on the Sanborn Maps throughout the last century includes, but is not limited to, manufacturing (i.e., jewelry, plastics, metals), a petroleum fuel distribution facility, and an electrical substation. The surrounding land usage represents a REC.

HREC Findings:

- Conditions indicative of a HREC were not identified during the course of this assessment.

CREC Findings:

- Conditions indicative of a CREC were not identified during the course of this assessment.

CONCLUSION

SAGE has performed a Phase I ESA of the Site in general conformance with the scope and limitations of ASTM Practice E1527-13 and the EPA’s AAI Rule and those exceptions identified in this report. Based on the information further described herein, it is the opinion of SAGE that a LSI be conducted to evaluate the identified RECs. The LSI would include a general evaluation of Site soils as well as groundwater, and given the current understanding that the Site may be considered for a school, SAGE recommends as part of the LSI, a sub-slab soil gas assessment be performed. Additional focused areas of exploration as part of the LSI would include the subgrade infrastructure that appears to be associated with a former steam heating system, located on the southern side of the Site structure, and the visually stained surface in proximity to a transformer located within the transformer room.

1144 Eddy Street, Providence, RI
September 23, 2021

Furthermore, although outside the scope of this Phase I ESA, SAGE recommends that all OHM containers be properly labeled and stored, and waste disposal documentation be maintained on the premises.

1.0 INTRODUCTION

1.1 Purpose

This report presents the findings of a Phase I Environmental Site Assessment (ESA) conducted of one (1) parcel addressed as 1144 Eddy Street in Providence, Rhode Island (Assessor's Plat 57, Lot 291) (hereinafter, "Site"). The purpose of this assessment is to identify "*Recognized Environmental Conditions*" (RECs) associated with the Site. The term *recognized environmental conditions* means the presence or likely presence of any *hazardous substances or petroleum products* in, on, or at a *property*: (1) due to any *release* to the *environment*; (2) under conditions indicative of a *release* to the *environment*; or (3) under conditions that pose a *material threat* of a future *release* to the *environment*. *De minimis* conditions are not *recognized environmental conditions*. *De minimis* conditions are those that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

Other forms of RECs evaluated as part of this assessment include historical recognized environmental conditions (HRECs) and controlled recognized environmental conditions (CRECs). HRECs are past releases of any hazardous substances or petroleum products that occurred in connection with the property and have been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). CRECs are past releases of *hazardous substances or petroleum products* that have been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances or petroleum products* allowed to remain in place subject to the implementation of required controls (for example, *property use restrictions, activity and use limitations, institutional controls, or engineering controls*).

1.2 Scope of Services

This assessment was prepared in accordance with generally acceptable engineering practices utilizing the American Society for Testing and Materials (ASTM) Designation E1527–13: *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. As such, it meets the requirements set forth in the United States Environmental Protection Agency's (U.S. EPA's) All Appropriate Inquiries (AAI) Rule under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), 40 CFR. § 312 (2005).

The scope of this investigation does not include ASTM defined exclusions such as radon, asbestos, biological agents, lead-based paint (LBP), mold, lead in drinking water, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality or high voltage power lines.

1.3 Significant Assumptions

The file and data review was limited to information obtained by SAGE Environmental, Inc. (SAGE) from prior reports, and the offices for the City of Providence. The Site reconnaissance description is based upon the condition of the Site on the day it was observed. The Site was observed by walking the property.

1.4 Special Terms and Conditions

No special terms or conditions were agreed upon for the completion of this report.

1.5 User Reliance

This ESA and report have been prepared on behalf of, and for the exclusive use of, Paolino Properties. This report and the findings herein shall not, in whole or in part, be disseminated or conveyed to any other party, nor used by any other party in whole or in part, without the prior written consent of SAGE. However, SAGE acknowledges and agrees that our client may convey this report to potential developers, lenders and title insurers associated with the current development or financing of the Site.

1.6 Deviations

This investigation was performed in general accordance with ASTM E2247-16 and AAI with the following deviation. The lien search required by Section 312.25 of the AAI final rule was not performed during the course of this assessment.

During the local records review, a cursory search for environmental liens was conducted; however, such information was not found and/or provided by the User. Please note this review is limited and is not intended to suffice a full search or a level of diligence commensurate with a title company. If such detailed evaluation is required, this service can be provided outside of the subject scope.

1.7 Data Gaps

The following data gaps were identified:

- At this time it is unknown how sanitary waste or potential discharge from business operations was managed between 1925, when the building was constructed, and the connection to municipal sewer in 1928.
- Information regarding the historical usage of the Site while occupied by the Jewelry Supply Company is unknown.
- Information regarding the historical manufacturing usage of the Site while is unknown.
- Historically, the Site generated hazardous waste; however, the waste streams were merged with those generated at 1139 Eddy Street. At this time, it is unknown which waste streams were generated at the Site.
- At the time of the Site Walkover, the equipment associated with the loading dock was non-operational; therefore, visual observation of the hydraulic system could not be completed.
- The passenger elevator pit was locked, and inaccessible on the day of the Site Walkover. Visual observation of the pit could not be completed.
- Relic piping is located throughout the Site building. The former usage of the relic piping could not be determined during the course of this assessment.
- Select areas within the Site building were inaccessible during the Site Walkover. These areas include the northeastern portion of the basement (locked at time of Site Walkover), and the passenger elevator pit.
- A document provided by the City of Providence Public Works Department depicts an “Acid Line” on the eastern edge of the original structure. No information about this acid line was obtained

during the course of this assessment.

SAGE did not identify the presence of any other significant data gaps (as defined in §312.10 of AAI final rule and §12.7 of ASTM E1527-13).

2.0 SITE DESCRIPTION

A Site Location Map depicting the Site on the “Providence Quadrangle” United States Geological Survey (USGS) 7.5-minute topographic map is included as **Figure 1**; a Site Plan, depicting the approximate Site boundary and pertinent Site features, is included as **Figure 2**; and a map showing the Rhode Island Department of Environmental Management (RIDEM) Groundwater Classification, nearby wells, nearby wetlands and rare and endangered species habitats is included as **Figure 3**. Site photographs are included in the **Photographs Attachment**.

Table 1
Site Description
1144 Eddy Street
Providence, RI

| | |
|--|--|
| Plat/Lot | Assessor's Plat 57, Lot 291 |
| Site Area | 0.39 of an acre. |
| Current Site Usage | The Site is currently unoccupied. |
| Historical Site Usage/ Research Notes | <p>Information reviewed to evaluate historical Site use included that maintained by City offices as well as historical aerial photographs, Sanborn Fire Insurance Maps, the Rhode Island State Map Atlas of 1870, and historical City directories. These resources indicate that in 1870, the Site was part of a park which extended from Eddy Street to the Providence River. According to the City of Providence Assessor's Card, the Site building was erected in 1925. In 1937, the existing Site building was referred to as the Farnham Building, presumably after the owner, Frank Farnham who owned the Site from 1924 through 1943. By 1938, the Site was occupied by the Jewelers Supply Company, and the Federal Products Corporation. Between 1944 and 2017, Site occupants have included the Federal Products Corporation (numerous name variations), Auxitrol-USA, the Bayside Federal Credit Union, and most recently, Mahr Federal Inc and Mahr, Inc.</p> <p>The Federal Products Corporation's operations comprised numerous parcels of land, and the Site has been identified by as Plant 1. Federal Products Corporation was a manufacturer of precision machining measuring devices. By 1994, the Site was utilized for administrative purposes. At the time of the Site Walkover, the Site building was no longer occupied.</p> |
| Zoning | M-2 (General Industrial District): Per the City of Providence, the M-2 General Industrial District is intended to provide areas for moderate and heavy intensity industrial uses, especially for those uses that are potentially hazardous, noxious, or incompatible with the uses in other districts. |
| Site Access | The Site is accessible <i>via</i> Eddy Street, Ernest Street and Cass Street. |
| Structure Description | The Site building is an approximate 40, 674-square foot, three (3) story structure, brick, and concrete constructed building. The western portion of the building is reportedly built slab-on-grade, and the eastern portion includes basement. |

| | |
|------------------------------------|--|
| Year Built | Per the City of Providence Assessor’s Card, the Site building was constructed in 1925. |
| Site Surfaces | The Site consists of the building footprint, concrete, asphalt, and landscaped areas. A chain-linked fence is located on the northwest and south side of the building. |
| Sanitary Sewer | Based on information obtained from the City of Providence Public Works Department, sanitary sewer enters the Site building from Ernest Street. The initial connection is reported to be June 22, 1928. At this time it is unknown how sanitary waste or potential discharge from business operations was managed between 1925, when the building was constructed, and the connection to municipal sewer in 1928. |
| Heating Source | Based on information obtained from the Site Facility Manager, the Site is connected to natural gas. A natural gas meter was not observed on the day of the Site Walkover; however, the Site Facility Manager stated that it is located in the basement, near the stairwell. |
| Water | The Site is serviced by the City of Providence Water Department. According to the Providence Water Department, the Site is serviced by one (1) six (6)-inch cast iron fire service water line and one (1) four (4)-inch cast iron service line. Both lines originate in Ernest Street and enter the approximate center of the building. The service line was reportedly connected on March 5, 1928, and the fire service line was reportedly connected on June 19, 1928. |
| Use of Adjoining Properties | <p>Adjoining properties include:</p> <ul style="list-style-type: none"> ➤ A public right-of-way (Ernest Street) is located to the north, followed by an industrial property owned by Motiva Enterprises LLC. The property includes vacant buildings, and a bulk fuel storage facility; ➤ A public right-of-way (Cass Street) is located to the south, followed by an industrial property owned by the Narragansett Electric Company; ➤ A public right-of-way (Eddy Street) is located to the west, followed by a commercial and industrial property owned by the Federal Products Corporation (Mahr, Inc.); and, ➤ The intersection of Ernest Street and Cass Street is located to the east. Beyond the intersection is commercial and industrial land, including but not limited to the land owned by Motiva Enterprises LLC, and operated as a bulk fuel storage facility. |

3.0 USER PROVIDED INFORMATION

An environmental questionnaire was supplied to SAGE as part of this assessment by the User, Michael Friedman. A copy of the questionnaire is attached hereto as **Attachment 1**.

3.1 Environmental Liens or Environmental Land Use Restriction (ELUR)

SAGE did not identify an environmental lien or ELUR associated with the Site. Please see further details in **Section 1.6, Deviations**.

3.2 Specialized Knowledge

SAGE was not supplied with specialized knowledge for the Site.

3.3 Valuation Reduction for Environmental Issues

SAGE was not made aware of a valuation reduction for environmental issues.

3.4 Owner, Property Manager and Occupant Information

SAGE was provided with the following information pertaining to the Site:

Owner: Federal Products Corporation

Occupant: Vacant

3.5 Reason for Performing Phase I

This Phase I ESA is being conducted as part of general due diligence in support of a Real Estate Transaction.

3.6 Previous Environmental Assessments

A previous assessment of the Site was not found or made available to SAGE during the course of this assessment.

4.0 RECORDS REVIEW

4.1 Environmental Record Sources (Federal and State)

A public records search was conducted by SAGE through an Environmental Data Resources, Inc. (EDR) FirstSearch Report.* This report consists of a review of state and federal databases, as required by the ASTM Standard. Databases reviewed include, but are not limited to, the National Priority List (NPL), the Superfund Enterprise Management System (SEMS, formerly CERCLIS), Rhode Island State-listed hazardous waste properties (SHWS), leaking underground storage tanks (LUSTs), registered underground storage tanks (USTs), and the Resource Conservation and Recovery Act (RCRA) hazardous waste generator list. A summary of the number of properties identified within ASTM radii for each category is presented below in **Table 2**, and the EDR report is presented as **Attachment 2**.

Table 2
Radius Summary
1144 Eddy Street
Providence, RI

| Database | Site Inclusion | Locations within Radius of Site | Research Radius from Site (miles) | Non-Geocoded Locations [†] |
|--------------|----------------|---------------------------------|-----------------------------------|-------------------------------------|
| NPL | No | 0 | 1.0 | 0 |
| Delisted NPL | No | 0 | 0.5 | 0 |

* The EDR Report contains information from a variety of public and government sources. The information presented in the report is limited by the information that is available. Some areas are limited due to inadequate address information and may contain government listed properties that are not mapped or mapped incorrectly. Based on these limitations, SAGE cannot be held accountable for properties that may be within the applicable radius, but are not present within the EDR Report.

† The EDR report also maintains a database of non-geocoded properties, which are properties that could not be spatially located in reference to distance from the subject Site due to missing geographical information. EDR provides a summary of these properties for reference purposes. Summaries of any non-geocoded properties that were reviewed during the course of this assessment are provided in **Section 4.1.3**.

| Database | Site Inclusion | Locations within Radius of Site | Research Radius from Site (miles) | Non-Geocoded Locations [†] |
|-------------------------------------|----------------|---------------------------------|-----------------------------------|-------------------------------------|
| CERCLIS | No | 0 | 0.5 | 0 |
| CERCLIS NFRAP | No | 2 | 0.5 | 0 |
| State Equivalent CERCLIS (SHWS) | No | 69 | 1.0 | 34 |
| SWF | No | 2 | 0.5 | 0 |
| RCRA CORRACTS | No | 2 | 1.0 | 0 |
| RCRA non-CORRACTS TSD | No | 0 | 0.5 | 0 |
| RCRA Generators List | No | 40 | 0.25 | 0 |
| State/Tribal UST(s) | No | 31 | 0.25 | 0 |
| State/Tribal LUST(s) | No | 19 | 0.5 | 1 |
| ERNS | No | N/A | Site only | 0 |
| Federal/State Brownfield(s) | No | 2 | 0.5 | 0 |
| Federal/State Institutional Control | No | 10 | 0.5 | 0 |

Select locations described further in the following subsections.

4.1.1 Site Related Records Review/Discussion

| | |
|--------------|---|
| Site Name: | Mahr Federal Inc., Federal Products, Federal Products Corporation (Plant 1) |
| Database(s): | FINDS, Spills, PRP and US Airs |
| Address: | 1144 Eddy Street, Providence, RI |

Comments:

According to information obtained from the US EPA FRS Facility Detail Report (https://ofmpub.epa.gov/frs_public2/fii_query_detail_disp_program_facility?p_registry_id=110002058692), Federal Products, was registered as manufacturing instruments and related products for measuring, displaying, and controlling industrial process variable (NAICS Code 334513). In addition, the Standard Industrial Classification (SIC) code for the Site is listed as: Process control Instruments (SIC Code 3823), and Engineering and Scientific Instruments (SIC Code 3811). The last update of this information was in 2014.

SPILLS:

On June 10, 1995, RIDEM received notification that approximately four (4) to five (5)-gallons of hydraulic oil was discharged to approximately 500 square feet of asphalt surface on two (2) "lots" owned by Federal Products, and a portion of Aldrich Street. The release originated from parking lot sweeper truck, operated by J & J Sweeping, Inc., which had a hole in a hydraulic line. Response actions included the application of sorbent "mats". Approximately (10) cubic yards of sorbent material was recovered and containerized. The spent sorbent material was reportedly added to the Federal Products production process waste stream (i.e., oily debris), and was going to be disposed of as regulated waste. On June 12, 1995, a "very slight" oil sheen was observed due to a rain event. No disposal documentation, maps depicting the location of the release, or additional information was provided. At this time, due to the lack of a parking on the Site, it is presumed that this release occurred on nearby properties, owned by Federal Products, which have parking lot areas. A copy of the Spill Report is included in **Attachment 3**.

US AIRS:

Federal Products was registered as having a minor air permit from at least 1985 through 1995. Pollutants identified on the US EPA website (https://enviro.epa.gov/enviro/afs_reports.detail_plt_view?p_state_county_compliance_src=4400700412)

Site Name: Mahr Federal Inc., Federal Products, Federal Products Corporation (Plant 1)

include volatile organic compounds (VOCs), total particulate matter, and chromium compounds. Based on files reviewed at RIDEM, the Air Permits are associated with the facility located at 1139 Eddy Street, not the Site. The Site was not listed as having any stacks, or associated discharges. The Site was historically one (1) parcel of land, which was part of a larger operation of Federal Products, which comprised numerous parcels in support of Federal Products Corporation/Mahr, Inc./Mahr Federal.

PRP:

The Site is listed as a Potentially Responsible Party (PRP) for three (3) Superfund Sites, including Cannon Engineering Corporation (CEC) located on First Street in Bridgewater, Massachusetts (MAD079510780), Landfill& Resource Recovery, Inc (L&RR), located on Oxford Road in North Smithfield, Rhode Island (RID093212439), and Plymouth Harbor/Cannon Engineering Corporation, located in Cordage Park in Plymouth, Massachusetts (MAD980525232). A brief description of each is provided below:

- Cannon Engineering Corporation, First Street, Bridgewater, Massachusetts (MAD079510780):
Based on information obtained from the Record of Decision, drafted by the US EPA, and dated March 31, 1988, CEC is a four (4) acre facility that handled, stored, and incinerated chemical waste onsite from 1974 through 1980. The primary chemicals of concern (COCs) affecting groundwater, soil and “debris” are VOCs, including benzene, trichloroethylene (TCE), and vinyl chloride (VC), polychlorinated biphenyl’s (PCBs), and polynuclear aromatic hydrocarbons (PAHs). In 1986, the US EPA identified approximately 600 PRPs, who either operated the facility, generated wastes that were shipped to the facility, arranged for the disposal of waste at the facility, or transported wastes to the facility.
- Landfill& Resource Recovery, Inc, Oxford Road, North Smithfield, Rhode Island (RID093212439):
Based on information obtained from the Record of Decision, drafted by the US EPA, and dated September 29, 1988, and information provided on the US EPAs website (<https://cumulis.epa.gov/supercpad/cursites/csitinfo.cfm?id=0101265>) the L&RR is a 28-acre landfill on a 36-acre parcel of land in North Smithfield, Rhode Island. The site originally was a sand and gravel pit and was used for small-scale refuse disposal from 1927 to 1974. In 1974, the site was sold and developed into a large-scale disposal facility accepting commercial, municipal, and industrial wastes. An estimated one million gallons (1,000,000) of hazardous wastes were accepted and disposed of with other wastes in the center of the landfill. The hazardous wastes included many types of bulk and drummed organic and inorganic materials in liquid, sludge, and solid forms. COCs identified include, but are not limited to, VOCs, arsenic, lead, and zinc. In 1988, the US EPA notified an undisclosed number of PRPs who either generated wastes that were shipped to the facility, arranged for the disposal of wastes at the facility, or transported wastes to the facility, of their potential liability.
- Plymouth Harbor/Cannon Engineering Corporation, Cordage Park, Plymouth, Massachusetts (MAD980525232):
Based on information obtained from the Record of Decision, drafted by the US EPA, and dated September 30, 1985, CEC is a 2.5-acre facility located in Cordage Park, bordering Plymouth Harbor, in Plymouth, Massachusetts. The facility includes three (3) ASTs, two (2) of which were estimated to have storage capacities in excess of 250,000-gallons, and one (1) of which had an estimated capacity of 500,000-gallons. The ASTs were reportedly utilized for the storage of #6 marine fuel oil and bunker C oil from approximately the 1920’s through 1974. In 1976, two (2) ASTs were rented for the reported

| | |
|------------|---|
| Site Name: | Mahr Federal Inc., Federal Products, Federal Products Corporation (Plant 1) |
|------------|---|

storage of waste oil, and in 1979, CEC was licensed by the Massachusetts Department of Environmental Quality Engineering (DEQ), to store motor oil, industrial oils and emulsions, solvents, lacquers, organic chemicals, inorganic chemicals, cyanide and plating waste, clay and filter media containing chemicals, plating sludge, oily solids, and pesticides. In 1980, DEQ issued an Order of Revocation, alleging that CEC had filed false reports and had transferred hazardous waste to persons or firms not licensed to handle hazardous waste. Subsequent investigations identified a slow leak at the bottom seam of one (1) of the above ground storage tanks (ASTs), leaks from the AST side valves, in addition to other noted concerns. COC's identified includes, but is not limited to, PAH'S (soil and sediment), pesticides (soil), and lead (soil and sediment), iron (surface water), selenium (surface water), lead (surface water), manganese (surface water), and silver (surface water), pesticides (sediment).

Based on information contained within the EDR Report, the Federal Products Corporation, with an address of 1144 Eddy Street, in Providence, Rhode Island, is listed as a PRP for each of the Superfund Sites listed above. No additional information was obtained.

RCRA:

Historically, the Site generated hazardous waste; however, the waste streams were merged with those generated at 1139 Eddy Street; therefore, at this time, it is unknown which waste streams were generated at the Site. A correspondence from Federal Products Corporation to RIDEM, dated January 16, 1990, stated that all photo chemical operations in Plant 1 were discontinued. No additional information about the waste generation at the Site could be confidently determined.

4.1.2 Surrounding Locations Related Records Review/Discussion

As part of the surrounding area review, SAGE evaluated select locations within the radius report and reviewed files maintained by the RIDEM Office of Land Revitalization and Sustainable Materials Management for select properties. Summaries of these reviews have been provided below.

| | |
|----------------------|----------------------------------|
| Identified Property: | Crisloid Plastics Inc. |
| Database(s): | UST, RCRA Non-Generator, FINDS |
| Address: | 55 Porter Street, Providence, RI |
| Distance: | 0.035 of a mile southeast |
| Gradient: | Topographically Upgradient |

Comments:

Based on information provided by EDR and RIDEM, this facility historically had one (1) 1,000-gallon capacity UST for the storage of #2 heating fuel. The UST was reportedly installed on October 9, 1984 and removed in December of 1991. According to the Permanent Closure Application, the tank was reportedly 40 years old in 1991; therefore, the presumed date of installation was circa 1951. RIDEM issued a Closure Certificate on December 9, 1991. No contamination was noted in the RIDEM file.

According to the files provided by RIDEM, Crisloid Plastics Inc., was classified as a Non-Generator, effective 1989. Crisloid Plastics ceased operations in 1986, prior to which they manufactured games,

completed injection molding of plastics, silk screening, packing, wood fabrication, and hot gluing of vinyl and paper. As part of these operations, they generated spray booth filters, ignitable waste (D001), corrosive waste (D002), and an unknown waste (K054). No violations were identified.

Based in the limited information provided to review, it is unlikely that this location has impacted the Site

| | |
|----------------------|---|
| Identified Property: | MAHR Federal Inc., Plant 2/Federal Products Corporation |
| Database(s): | UST, RCRA-LQG, FINDS |
| Address: | 1339 Eddy Street, Providence, RI |
| Distance: | 0.046 of a mile west |
| Gradient: | Topographically Downgradient |

Comments:

This facility is reported to conduct chrome plating, metal washing, metal machining, metal polishing, metal plating, printing on metal by using photographic processes, wet vibing of metal parts and chemical paint stripping.

UST:

Based on information provided by EDR and RIDEM, this facility historically had four (4) registered USTs. They are as follows:

- Tank 1: 10,000-gallon UST for storage of #2 heating oil – Installed on April 1, 1972, and removed on June 1, 1994.
- Tank 2: 20,000-gallon UST for storage of #2 heating oil – Installed on October 9, 1984, and removed on April 23, 1986.
- Tank 3: 20,000-gallon UST for storage of #2 heating oil – Installed on October 9, 1984, and removed on April 23, 1986.
- Tank 4: 270/275/500-gallon UST for storage of #2 heating oil – Installed on October 9, 1984, and removed on November 9, 1989.

Based on a figure provided to RIDEM, the two (2) 20,000-gallon capacity USTs (Tanks 2 and 3) were located on a parcel of land purchased by Federal Products; however, they were located on the north side of Aldrich Street, not 1139 Eddy Street. The USTs are noted as being removed and RIDEM issued a Certificate of Closure on April 23, 1986. No contamination was noted in the RIDEM file.

On November 9, 1989, RIDEM issued a Certificate of Closure for Tank 4. No contamination was noted in the RIDEM file.

On January 25, 1995, RIDEM issued a Closure Certificates for Tank 1. Based on the UST Closure Inspection Checklist, completed by RIDEM personnel, the UST was noted as being slightly corroded; however, there were no visible holes. Minor soil staining was observed, which was attributed to overfilling. The resulting PID reading was less than 14 ppm. RIDEM did not require any additional investigations.

RCRA:

The MAHR Federal Inc. Plant 2 is registered as a LQG of ignitable waste (D001), corrosive waste (D002),

arsenic (D004), barium (D005), cadmium (D006), chromium (D007), lead (D008), spent halogenated solvents (F001), spent nonhalogenated solvents (F003, F005), wastewater treatment sludge from electroplating operations (F006), spent cyanide plating bath solutions (F007), plating bath residues (F008) and unknown (R015). Additional wastes may be generated that are not listed above. While registered as a generator, they received informal written violations from the State of Rhode Island on December 4, 1989, November 27, 2012, December 17, 2015. The Generator violations cited general, pre-transport, state statute or regulation, universal waste-small quantity handlers, universal waste-small quantity generators, used oil-generators, and TSD IS-Container Use and Management, TSD IS-Contingency Plan and Emergency Procedures, TSD IS-General Facility Standards. Compliance was reportedly achieved for all violations cited. On February 7, 2020, RIDEM completed a compliance evaluation was completed and documented thirteen (13) "hazardous waste management irregularities". RIDEM stated that Mahr took immediate steps to correct the non-compliance issues which included labeling, storage practices, lack of storage tank integrity and compatibility documentation, lack of daily inspections, failure to close a deactivated tank, and various administrative task.

This facility has a wastewater discharge permit with the Narragansett Bay Commission (P1106-362-0222), and they are classified as a metal finisher.

Air Permitting:

This facility has an Air Toxics Operating Permit due to the generation the following emissions associated with their manufacturing process include, but are not limited to, Nitrogen Oxides (NOx), Sulger Oxide (Sox), carbon monoxide (CO), particulates, chromium, nickel, manganese, cadmium, arsenic, hydrogen chloride, VOCs including 1,1,1-trichloroethane, mineral spirits, chlorinated fluoride, isopropyl, MEK, ethylene glycol, toluene, methylene biphenyl isocyanate, 2,4-ditoluene, xylenes, and particulates. In 1994, Federal Products Company entered into a Consent Agreement with the Air Resources division of RIDEM. The Consent Agreement formalizes Federal Products legal obligations as they pertain to the Rhode Island Clean Air Act and Air Pollution Control Regulations.

Conclusion:

Based on information provided to review by RIDEM, there is no documented release from this facility that is known to have impacted the Site.

| | |
|----------------------|----------------------------------|
| Identified Property: | Federal Products Corp, Plant 4 |
| Database(s): | RCRA Non-Generator, FINDS |
| Address: | 1200 Eddy Street, Providence, RI |
| Distance: | 0.167 of a mile south |
| Gradient: | Topographically Upgradient |

Comments:

The Federal Product Corp, Plant 4 is classified as a Non-Generator. Historically they were registered as a LQG of spent halogenated solvents (F001), spent nonhalogenated solvents (F005), and undefined (F017). Additional wastes may be generated that are not listed above. While registered as a generator, they received informal written violations from the State of Rhode Island on February 14, 1989, and December 4, 1989. The Generator violations cited "general". Compliance was reportedly achieved for all violations

cited.

Based on information provided to review by RIDEM, there is no documented release from this facility that is known to have impacted the Site.

| | |
|----------------------|--|
| Identified Property: | Lorac Co. |
| Database(s): | UST, SHWS, AUL and RCRA Non-Generator, |
| Address: | 97 Johnson Street, Providence, RI |
| Distance: | 0.081 of a miles south southeast |
| Gradient: | Topographically Downgradient |

Comments:

UST:

Based on information provided by EDR and RIDEM, this facility historically had six (6) registered USTs. They are as follows:

- Tank 1: 1,000-gallon UST for storage of gasoline – Installed on October 9, 1984, and permanently closed on July 23, 1998.
- Tank 2: 1,000-gallon UST for storage of gasoline – Installed on October 9, 1984, and permanently closed on July 23, 1998.
- Tank 3: 1,000-gallon UST for storage of #2 heating oil – Installed on October 9, 1984, and permanently closed on July 23, 1998
- Tank 4: 50-gallon UST for storage of an unknown product – Installed on October 9, 1984, and permanently closed on July 23, 1998.
- Tank 5: 50-gallon UST for storage of an unknown product – Installed on October 9, 1984, and permanently closed on July 23, 1998.
- Tank 6: 750-gallon UST for storage of gasoline – Installed on October 9, 1984, and permanently closed on October 16, 2014.

Tanks 1 through 5:

According to the RIDEM UST Inspection Checklist, completed by RIDEM personnel, no holes were noted in Tanks 1 through 5; however, a slight odor was noted. RIDEM requested that a Closure Assessment be completed. On August 20, 1998, Beta Engineering, Inc. (BETA), submitted a UST Closure Report documenting that removal and assessment associated with the removal of Tanks 1 through 5. Soil samples which were collected for laboratory analysis of VOCs and total petroleum hydrocarbons (TPH) documented all concentrations to be less than their applicable RIDEM Direct Exposure Criteria. The maximum concentration of TPH in soil was reported to be 160 ppm, and was attributed to historical “overspillage”, and/or the accidental release of liquid from one (1) of the USTs during removal activities. Groundwater was not encountered during UST removal activities. BETA recommended that no additional subsurface work be required. On October 20, 1998, RIDEM issued a Closure Certificate for Tanks 1 through 5.

Tank 6:

According to the RIDEM UST Inspection Checklist, completed by RIDEM personnel, no holes were noted in Tank 6; however, corrosion was observed. RIDEM requested that a Closure Assessment be completed. On December 2, 2014, Alliance Environmental Group, Inc. (AEG), submitted a UST Closure Assessment to RIDEM, documenting that removal and assessment associated with the removal of Tank 6. Soil samples which were collected for laboratory analysis of VOCs documented the concentration of 1,1,1-Trichloroethane and trichloroethene at concentrations above the laboratory detection limit, but below the RIDEM Residential Direct Exposure Criteria (R-DEC) and GB Leachability Criteria (GB-LC). It was AEG's opinion that a release to the environment, associated with Tank 6, did not occur. On January 20, 2015, RIDEM issued a Closure Certificate for Tank 6.

Site Remediation File:

On September 18, 2014, AEG submitted a Release Notification form to RIDEM due to the reported concentration of lead and select PAHs in soil at concentrations in excess of the RIDEM R-DEC and/or Industrial Commercial Direct Exposure Criteria (I/C-DEC), and select VOCs in excess of the RIDEM GB Groundwater Objectives (GB-GWO). Subsequent assessment identified arsenic and TPH in soil at a concentration in excess of the applicable RIDEM DEC criteria. The source of contamination was associated with historic fill and historic usage of the facility. Groundwater flow direction was reported to be in an easterly direction, which is crossgradient to the Site (i.e., 1144 Eddy Street). Remedial actions completed included the installation of an engineered cap and the recording of an ELUR/Soil Management Plan (SMP).

On September 10, 2015, an ELUR was recorded with the City of Providence. The ELUR restricted residential usage of the property, groundwater usage as potable water, disturbance and exposure to soil, water infiltration, the construction of any sub-surface structures, the disturbance of the engineered controls, and the maintenance of the engineered controls.

On March 4, 2016, AEG submitted a Soil Gas Sampling Proposal to RIDEM, documenting a sub-slab soil gas sampling event. Sub-slab soil gas samples were collected and submitted for laboratory analysis of VOCs by US EPA Method TO-15. The reported concentration of all VOCs were below the Massachusetts Department of Environmental Protection (MassDEP) C/I Sub-Slab Soil Gas Screening Values. AEG requested that No Further Action be required, and the termination of continued quarterly groundwater monitoring. On March 29, 2017, RIDEM issued a No Further Action Letter.

RCRA:

The Lorac Co. is classified as a Non-Generator and was historically registered a LQG of waste trichloroethane (F001) and waste oil (R010). No violations were noted.

Conclusion:

Based on information provided by RIDEM, groundwater flow direction at this facility is reported to flow in an easterly direction, which is hydrogeologically cross-gradient to the Site. Therefore, in consideration of the reported groundwater flow direction, it is unlikely that the release at this location has impacted the Site. However, if it is later determined that a preferential pathway exists (i.e., sub-grade utilities leading from this facility to the Site), or that the local groundwater flow direction varies, further

investigation may be warranted.

| | |
|----------------------|-----------------------------------|
| Identified Property: | DES Offset |
| Database(s): | UST, LUST |
| Address: | 55 Johnson Street, Providence, RI |
| Distance: | 0.081 of a miles southeast |
| Gradient: | Topographically Downgradient |

Comments:

Based on information provided by EDR and RIDEM, this facility historically had one (1) 2,000-gallon capacity UST for the storage of #2 heating fuel. The UST was reportedly installed on October 9, 1984 and removed on October 22, 1998. The UST was noted to have surficial corrosion with some pitting; however, no holes were noted. A loose coupling, associated with the copper supply line, was identified during removal activities. Approximately 78.05 tons of petroleum-impacted soil [as defined as having a photoionization detector (PID) reading greater than 40 parts per million (ppm)], was excavated and stockpiled for offsite disposal. Due to the presence of petroleum-impacted soil, RIDEM requested that a UST Closure Assessment be completed.

On December 9, 1998, Lincoln Environmental, Inc. (LEI) submitted a UST Closure Assessment Report to RIDEM. Based on information provided in the UST Closure Assessment Report, groundwater was not encountered during UST removal activities, which reached a maximum depth of twelve (12) feet below ground surface (bgs). Upon completion of UST removal and soil excavation activities, a soil sample was collected from the base of the northern portion of the excavation limit and submitted for laboratory analysis of TPH. According to LEI, the concentration of TPH [1,900 milligrams per kilogram (mg/kg)] was below RIDEM Leachability Criteria of 2,500 mg/kg. It was LEI's opinion that no further investigations or removal actions were necessary. No additional information was provided.

Conclusion:

Based on the information provided to review, petroleum-impacted soil, at a concentration less than the applicable RIDEM Criteria exists at this location. This facility is located approximately 430 feet southeast, and topographically downgradient of the Site. Groundwater is presumed to flow in a easterly direction (based on the reported groundwater flow direction at 97 Johnson Street), resulting in this location being hydrogeologically cross-gradient to the Site. At this time, and based on the presumed groundwater flow direction, it is unlikely that the residual petroleum-impacted soil is impacting the Site.

| | |
|----------------------|----------------------------------|
| Identified Property: | Star Enterprise |
| Database(s): | UST |
| Address: | 1120 Eddy Street, Providence, RI |
| Distance: | 0.06 of a mile north northwest |
| Gradient: | Topographically Upgradient |

Comments:

Based on information provided by EDR and RIDEM, this facility historically had one (1) 4,000-gallon capacity UST for the storage of #2 heating fuel. The UST was reportedly installed on November 1, 1981 and removed on December 2, 1991. RIDEM issues a Certificate of Closure on December 2, 1991. The

| |

| Identified Property: Star Enterprise |
|--------------------------------------|

UST was reported as being sound and the excavation “clean”. No additional information was provided.

| |
|--|
| Identified Property: Star Enterprise/Shell-Providence Terminal |
| Database(s): UST, LUST, SHWS, ICIS, US Airs, RCRA Non-Generator, FINDS |
| Address: 520 Allens Avenue, Providence, RI |
| Distance: Northern Site Abutter and 0.375 of a mile northeast |
| Gradient: Topographically Downgradient |

Comments:

This facility is a bulk storage petroleum distribution facility located on land adjacent to the intersection of Eddy Street and Ernest Street (immediately north of the Site), and extends in an easterly direction, beyond Allens Avenue to the Providence River. The documented groundwater flow direction, based on years of site investigations, is to the north-northeast and northeast, away from the Site (i.e., 1144 Eddy Street). Therefore, this facility is considered to be hydrogeologically downgradient from the Site. However, due to the proximity of this facility to the Site, SAGE reviewed files at RIDEM.

Historical records indicate that the facility was used as a lubrication oil blending facility, and asphalt production facility, and a petroleum distribution facility since at least 1907. In addition, there was a railcar maintenance facility on the property. The Lube oil blending facility and asphalt facility were decommissioned in 1960 and dismantled during the late 1970s. Historically, there have been approximately 149 tanks on the property, and various releases of petroleum dating back to at least 1989.

As of 2018 there were approximately twenty-five (25) bulk storage tanks with capacities ranging from 462,000-gallons to over 10 million gallons. Petroleum product stored (historically or currently) includes, but is not limited to, regular gasoline, premium gasoline, ultra-low sulfur diesel heating oil, aviation gasoline, and fuel grade ethanol. Fuel is received by marine ships, barges, trucks, or the railroad and transported throughout the facility through a series of underground and aboveground product lines. Upgrades at the facility have resulted in the removal of many, if not all, of the underground product lines.

Site Investigations completed at the facility, and near the Site (i.e., 1144 Eddy Street), documented the presence of fill material (brick, cement), black tar-like material, TPH, benzene, toluene, ethylbenzene, and xylenes (BTEX), metals, and tetrachloroethylene (PCE) in soil adjacent to Ernest Street. Subsequent testing of the black tar material around Tank 7549 (located northeast of the Site) determined that it did not have any RCRA defined hazardous characteristics (i.e., ignitability, corrosivity, EP Toxicity) or PCBs. The thickness of the tar material ranged from approximately two (2) to twelve (12) feet thick, with a maximum documented depth of thirteen (13) feet bgs. The black tar was noted as being viscous, which restricted subsequent migration. In 1992, seven (7) buried 55-gallon drums were discovered in proximity to AST 7549, located northeast of the Site. Laboratory analysis documented the presence of lead and sulfur. Approximately 201 tons of excavated soil was transported offsite for property disposal.

On January 28, 2021, Sovereign Consulting Inc., submitted a Site Status Report to RIDEM documenting groundwater monitoring data from January through December of 2020. At the time of report drafting,

groundwater monitoring wells MW-14 and MW-16 were the closest groundwater monitoring wells to the Site (i.e., 1144 Eddy Street). Groundwater monitoring well MW-16 is located at the corner of Eddy Street and Ernest Street, and MW-14 is located proximate to AST 7549. The ASTs located closest to the Site are AST 7132 (ethanol), and AST 7459 (gasoline). No non-aqueous phase liquid (NAPL) was detected during the reporting period (NAPL was detected on groundwater sampled from MW-14 in the 1990s), the concentration of BTEX and naphthalene were less than the laboratory detection limits, and the maximum concentration of TPH-DRO was 1.2 milligrams per liter (mg/l) in groundwater sampled from MW-14. Please note that the proposed GB-GWO for TPH-Diesel Range Organics (TPH-DRO), according to the report, is 5.0 mg/l. A review of historical groundwater data provided in the report documented that the concentration of all analytes sampled since 1992 have been less than the applicable RIDEM GB-GWO.

Summary:

Groundwater sampling completed in 2020 documents that the concentration of BTEX and naphthalene are below the applicable RIDEM GB-GWO in groundwater monitoring wells located north of the Site, and the groundwater flow direction is documented to be in a northeasterly direction, away from the Site. At this time, based on the most recent groundwater sampling event, this facility does not present a REC to the Site. .

| | |
|----------------------|-----------------------------------|
| Identified Property: | Mary I Montuori/Rentals |
| Database(s): | UST, LUST |
| Address: | 1149 Broad Street, Providence, RI |
| Distance: | 0.309 of a mile west |
| Gradient: | Topographically Upgradient |

Comments:

UST:

Based on information provided by EDR and RIDEM, this facility historically had five (5) registered USTs. They are as follows:

- Tank 1: 1,000-gallon UST for storage of #2 heating oil – Installed on October 9, 1984, and permanently closed on June 9, 1998.
- Tank 2: 3,000-gallon UST for storage of gasoline – Installed on October 9, 1984, and permanently closed on May 12, 1986.
- Tank 3: 3,000-gallon UST for storage of gasoline – Installed on October 9, 1984, and permanently closed on May 12, 1986
- Tank 4: 4,000-gallon UST for storage of gasoline – Installed on October 9, 1984, and permanently closed on May 12, 1986
- Tank 5: 50/550-gallon UST for storage of waste oil – Installed on October 9, 1984, and permanently closed on August 2, 2005.

On May 12, 1986, RIDEM issued a Closure Certificate for Tanks 2, 3 and 4. No additional information was provided.

On June 9, 1998, RIDEM personnel completed a Closure Inspection Sheet for Tank 1. The tank was

| |
|--|
| Identified Property: Mary I Montuori/Rentals |
|--|

reported as being sound and the soil “appears clean”. On July 7, 1998, RIDEM issued a Closure Certificate.

On October 12, 2005, FJA Environmental Associates, Inc., submitted a UST Closure Assessment to RIDEM. The reported documented activities associated with the removal of Tank 5, and a concrete drywell. Visual evidence of contamination was noted in the excavation associated with the drywell, resulting in the excavation and offsite disposal of approximately 45.17 tons of soil. No visual evidence of contamination was observed in association with the waste oil UST; however, pitting and corrosion was observed. Soil samples were collected from beneath the UST and drywell and submitted for laboratory analysis of TPH. The reported concentration of TPH less than the detection limit of 20 ppm. Groundwater was not sampled as part of the UST and drywell closure assessment. On February 25, 2016, RIDEM issued a Closure Certificate for Tank 5, and a letter stating that No Further Action would be required, and the status of the LUST was changed from active to inactive.

Based on information provided to review by RIDEM, SAGE is of the opinion this location is unlikely to have impacted the Site.

| | |

| Identified Property: | RIBCO MFG Inc./Child and Family Services |
| Database(s): | SHWS, AUL, RCRA Non-Generator, FINDS |
| Address: | 1268 Eddy Street, Providence, RI |
| Distance: | 0.300 of a mile south |
| Gradient: | Topographically Upgradient |

Comments:

UST:

Based on information provided by RIDEM, this facility historically had one (1) 3,000-gallon capacity UST for the storage of #2 heating fuel. The UST, located beneath the building footprint, was reportedly installed on October 9, 1984, and closed-in-place September 16, 1993. No additional information was provided.

Site Remediation:

This facility was formerly the location of Winsor & Jerauld Manufacturing Company (1938 through 1988), and the Matalart Buckle Company/Rhode Island Buckle Company (1999 through 2003). As a result of historical operations, and subsequent environmental investigations initiated in 2014, the following COCs were identified, and documented in the Post Construction Soil Management Plan of the ELUR, dated January 11, 2019, and recorded with the City of Providence in Book 12262, Page 111:

➤ Soil:

- PAHs were reported to be in excess of the RIDEM R-DEC I/C-DEC,
- TPH was reported to be in excess of the RIDEM R-DEC, I/C-DEC, and RIDEM GB-LC.
- The concentration of arsenic in soil was reported to exceed the RIDEM R-DEC and I/C-DEC; however, it was determined to be a naturally occurring condition, and not the result of a release.

- Groundwater:
 - Groundwater samples were collected and submitted for laboratory analysis; however, no analytes were reported to be greater than the applicable RIDEM GB-GBO.
- Soil Vapor:
 - VOCs, including PCE, and TCE were reported at concentrations in excess of the applicable Massachusetts Residential and/or Industrial Sub-Slab Soil Gas Screening Values (SSGSV).
- Indoor Air:
 - PCE was reported at a concentration in excess of the applicable Residential and Commercial/Industrial Indoor Air Threshold Values (TVs).

The selected remedy included RIDEM approved Engineered Controls consisting of concrete, asphalt, clean soil and/or architectural features in all areas of the site, Institutional Controls including an ELUR to ensure the integrity of the Engineered Controls, and the installation and operation of a Sub-Slab Depressurization System (SSDS) to mitigate risks associated with the detected concentrations of VOCs in the sub-slab soil vapor and indoor air.

Groundwater flow direction was documented to be in a northeasterly direction (Site Investigation Report, dated May 2016, drafted by Redwood Environmental Group, LLC); however, due to the lack of groundwater impacts, off-site migration was not anticipated.

RCRA:

This facility was historically registered as a SQG of spent halogenated solvents (F001). As of 2007, they were no longer registered as a SQG. No additional information was provided.

Conclusion:

Due to the lack of documented groundwater impacts, SAGE is of the opinion this location is unlikely to have impacted the Site.

4.1.3 Non-Geocoded Records Review Summary

A total of 35 unplottable properties were identified in the radius report.

Based on a review of information available in the radius report, further investigation of select properties was performed through a review of available files maintained by the RIDEM Office of Land Revitalization and Sustainable Materials Management, as summarized below.

| | |
|----------------------|--|
| Identified Property: | National Grid – Field’s Point Substation |
| Database(s): | SHWS |
| Address: | Eddy Street – Field’s Point |
| Distance: | Southerly Abutting Property, Across Cass Street |
| Comments: | On September 30, 1994, the Narragansett Electric Company drafted a Notification of Release form, and verbally contacted RIDEM regarding staining that was observed on concrete foundations that supported oil-filled electrical equipment. Subsequent soil sampling documented the concentration of PCBs (13 |

Identified Property: National Grid – Field’s Point Substation
ppm) in excess of the applicable regulatory criteria of 10 ppm.

In November of 1994, Environmental Science Services (ESS) submitted a Remediation Action Report to RIDEM which documented remedial actions completed to address the release of PCBs. Remedial actions completed included the excavation and off-site disposal of approximately 168.85 tons of impacted soil and the collection of soil samples for laboratory analysis of PCBs and TPH. Post-excavation soil sampling documented the presence of residual PCB impacted soil at approximately 3.5 feet bgs (4 mg/kg) and TPH impacted soil at a depth of five (5) to six (6) feet bgs (up to 14,400 mg/kg). Additional excavation could not be completed due to structural concerns. ESS recommended no further action in the excavated areas.

On April 18, 1995, RIDEM issued a Letter of Compliance based on the current Site usage.

Based on information provided by RIDEM, contaminated soil with a reported concentration of TPH (14,400 mg/kg) in excess of the applicable RIDEM R-DEC of 500 mg/kg and I/C-DEC of 2,500 mg/kg, was left in place due to structural concerns. The vertical and horizontal extent of TPH contaminated soil was not delineated, and an assessment of groundwater was not completed. The area of the TPH contaminated soil is approximately 45 to 55 feet south of the Site boundary. The maximum PCB concentration of residually impacted soil was 4 mg/kg, which is less than the RIDEM R-DEC and I/C-DEC of 10 mg/kg. Therefore, based on the location of the TPH release area (45 to 55 feet south of the Site), and the local documented groundwater flow direction in a northeasterly direction, it is possible the release noted at this location could have impacted the Site.

4.2 Municipal Records and File Reviews

4.2.1 Chain-Of-Title Records

Title records were reviewed through the City of Providence Recorder of Deeds/Land Evidence Department and on-line Recorder of Deeds database. This information is provided for historical purposes only and is not intended for legal purposes. The current owner of the Site, per the City of Providence Assessors Card, is Federal Products Corporation, who took ownership of the Site on July 7, 2012 (Book 99999/Page999). Please note that according to the City of Providence, Recorder of Deeds Department, the information on the Assessor’s card may be inaccurate. Previous ownership, as documented on the Chain-of-Title is included in **Table 3**. Copies of the Assessor’s Card and the Chain-of-Title cards are included in **Attachment 4**.

Table 3
Owner Chronology
1144 Eddy Street
Providence, RI
Assessor's Plat 57, Lot 291

4.2.2 Fire Department

SAGE personnel submitted a public records request to the City of Providence Fire Prevention Office to determine if that office maintained information regarding possible USTs located at the Site and prior incidents (i.e., spills or fires) that could have caused a release of oil or hazardous materials to the environment. The City of Providence Fire Department provided a copy of a letter, dated October 14, 1993. This letter was drafted by The Providence Fire Department, Division of Fire Prevention, and addressed to Mr. George Raposa from Piping Systems, Inc. The letter acknowledged that a plan regarding an AST appeared to be in compliance with the Rhode Island Fire Safety Code. No additional information was provided. A copy of this letter can be found in **Attachment 4**.

4.2.3 Inspection and Standards

SAGE personnel submitted a public records request to the City of Providence Inspection & Standards Department in an effort to obtain information relative to the Site. The Inspections & Standards Department provided copies of permits issued from May 29, 1958 through December 2, 2019. The permits were associated with building maintenance (i.e., window glass repairs/replacement, caulking window frames, brick repointing, exterior repairs to existing concrete columns and sills, unspecified interior and exterior repairs, installation of awnings, exterior cleaning of masonry via sandblasting and “water blasting”, roof replacement, erection of temporary tent, installation and/or replacement of exterior signage), and the construction of a concrete pad for a fuel storage tank (Permit number 738). Permit number 738 was issued on October 25, 1993, for the erection of a concrete pad for a fuel storage tank. No additional information regarding the fuel type, storage capacity, or proposed location of the concrete pad. Due to shadows on the 1997 aerial imagery, the location of the fuel storage tank could not be determined.

The Inspection and Standards Department provided copies of the above referenced permits, which are included in **Attachment 4**.

4.2.3 Planning and Development Records

SAGE personnel submitted a public records request to the City of Providence Planning and Development Department in an effort to obtain information relative to the Site. As of the drafting of this report, the Planning and Development Department did not provide any records to SAGE.

4.2.4 Public Works Records

SAGE personnel reviewed records at the City of Providence Public Works Department and contacted the City of Providence Water Department in an effort to obtain information relative to the Site.

Based on information obtained from the City of Providence Public Works Department, sanitary sewer enters the Site building from Ernest Street. The initial connection is reported to be June 22, 1928.

According to the Providence Water Department, the Site is serviced by one (1) six (6)-inch cast iron fire service water line and one (1) four (4)-inch cast iron service line. Both lines originate in Ernest Street and enter the approximate center of the building. The service line was reportedly connected on March 5, 1928, and the fire service line was reportedly connected on June 19, 1928.

An undated document provided to SAGE depicts an "Acid Line". The acid line is located on the eastern edge of the original structure. No additional information was provided.

Copies of the documents provided by the Public Works Department are included in **Attachment 4**.

4.3 Physical Setting

The Site is situated at approximately forty-two (42) feet above mean sea level (MSL). The topography at the Site is relatively flat, with a slight slope toward the east and northeast.

4.3.1 Geology and Hydrology

The Flood Insurance Rate Map (FIRM) for the Site was reviewed online through the Federal Emergency Management Agency (FEMA), and the geologic information was reviewed through USGS. A summary of this information can be found below in **Table 4**.

Table 4
Geology and Hydrology Information
1144 Eddy Street
Providence, RI

| | |
|---------------------------|--|
| Terrane: | Avalon |
| Subterranean: | Esmond-Dedham |
| Rock Type: | Stratified |
| Age: | Pennsylvanian |
| Surficial Geology: | Outwash |
| Waterbodies: | 2480 feet southwest of Sassafras Cove, which is part of the Providence River. |
| FIRM: | 44007C0317J, effective on 09/18/2013 |
| Flood Zone: | Zone X (unshaded), which is defined as an area of minimal flood hazard, with a less than 0.2% annual chance of flooding. |

4.3.2 Priority Resources GIS Map

Based on a review of maps obtained from the Rhode Island Geographic Information System (RIGIS) database for the Site and vicinity, groundwater at the Site and immediate surrounding area is classified as GB, which is defined as groundwater that is presumed not suitable for use as a public or private drinking water supply without prior treatment. Additionally, the Site is not located within any resource areas or protected open spaces.

4.4 Historical Use Information on the Site and Adjoining Properties

Historical research was conducted through data providers and at State and City agencies. Historical information sources researched include aerial photographs, Sanborn maps, and historical address directories.

4.4.1 Sanborn Maps

Sanborn map coverage was found to exist for the Site and immediately surrounding area as summarized in **Table 5** below.

Table 5
Sanborn Descriptions
1144 Eddy Street
Providence, RI

| Year | Site Description |
|------|---|
| 1900 | Sanborn Map coverage of the Site, and abutting properties located to the south, north, and east, is not available. Properties located to the west of the Site are depicted as residential properties. |
| 1921 | The Site is comprised of four (4) vacant parcels of land. Residential dwellings and vacant parcels of land are located to the west and south of the Site. The parcel of land located north of the Site is noted as being the "Proposed Site of S.N.E.R.R", beyond which is a residential dwelling and associated garage. |
| 1950 | The Site building is identified as a three (3) story structure, with a small one (1) story area on the northern portion of the building. The building is equipped with an automatic sprinkler system, a fire escape on the west side, a fireproof vault in the approximate center of the building, stairs on the west, north and east sides, and an elevator on the north side. An unknown feature (4' FR ON RF) is depicted in the southeast side of the building. The Site occupant, or owner, is listed as the Federal Products Corp (Instrument MFG). A Siamese fire department connection is depicted on the northeast side of the building. An 8-inch water line is depicted in Ernest Street and Eddy Street, and Cass Street is noted as being unpaved. The Narragansett Electric Company Sub-Station and transformer yard is located south of the Site (1150 Eddy Street), the Texas Gasoline Storage Yard, and associated buildings and bulk storage gasoline tanks are located to the north, residential dwellings and an auto painting facility are located to the west, and residential dwellings a restaurant and an auto glass store are located south southwest of the Site. |
| 1956 | There are no significant changes to the Site or abutting properties. |
| 1972 | There are no significant changes to the Site; however, the Federal Products Corporation expanded operations onto land located to the west of the Site, and land located southeast of the Site appears to be utilized for manufacturing operations. |
| 1977 | There are no significant changes to the Site or abutting properties. |
| 1982 | There are no significant changes to the Site or abutting properties. |

Copies of the maps are attached as **Attachment 5**.

4.4.2 Aerial Photographs

Historical aerial photographs were viewed online using the RIDEM Environmental Resource Mapping tool

(<https://ridemgis.maps.arcgis.com/apps/webappviewer/index.html?id=87e104c8adb449eb9f905e5f18020de5>) for the years 1939, 1951-52, 1962, 1972, 1981, 1988, 1997, 2008, 2011, 2014, 2018, 2019, 2020 and 2021. A summary of the Site and surrounding property descriptions is below.

Table 6
Historical Aerial Descriptions
1144 Eddy Street
Providence, RI

| Year | Site Description |
|---|---|
| 1939 | The Site appears to be developed with a structure, located in the same approximate location as the current-day building. The easterly portion of the building appears to be a separated structure than the current day building. Cass Street appears to be unpaved. The Narragansett Electric substation is visible to the south of the Site. Land located southeast of the Site is undeveloped. The bulk storage facility, and associated buildings, are visible to the north. |
| 1951-52 | The eastern portion of the existing Site building is visible. There are no other significant changes to the Site. Land development is visible southeast of the Site. Expansion of the bulk storage facility, located north and northeast of the Site, is visible. Commercial development in the vicinity of the Site is visible. |
| 1962 | There appears to be four (4) protrusions from the roof of the Site building. Commercial development in the vicinity of the Site is visible. |
| 1972 | There are no significant changes to the Site. The expansion of the Federal Products complex, located to the west of the Site is visible. Route 95 is visible to the north and northwest of the Site. |
| 1981 | There are no significant changes to the Site or abutting properties. |
| 1988 | Modification to a portion of the Site building roof is visible. There are no other significant changes to the Site or abutting properties. |
| 1997 | There are no significant changes to the Site or abutting properties. |
| 2008 | There are no significant changes to the Site. The electrical infrastructure that was historically located in the Narragansett Electric sub-station yard (1150 Eddy Street), appears to be removed. There are no other significant changes to the Site or abutting properties. |
| 2011, 2014, 2018, 2019, 2020, and 2021 | There are no significant changes to the Site or abutting properties. |

4.4.3 Local Street Directories

A City directory search was conducted through EDR. Directories were reviewed beginning in 1938 and in approximate five-year intervals through the most current listing. The following is the result of this research.

Table 7
Historical Directory Descriptions
1144 Eddy Street
Providence, RI

| Year | Owner |
|------|--|
| 2017 | Federal Products Corp An Esterline C. |
| 2014 | Federal Products Corp An Esterline C, Mahr Federal Inc. |
| 2010 | Mahr Federal Inc. |
| 2005 | Bayside Federal Credit Union, Federal Products Corp., Federal Products Corp An Esterline C |
| 2000 | Bayside Federal Credit Union, Federal Products Incorporated, Federal Products, Federal Products Corporation An Esterline Company |
| 1995 | Bayside Federal Credit Union, Federal Products Corp An Esterline Co, Federal Products Corporation An Esterline Company |
| 1992 | Auxitrol-USA, Federal Products Corporation An Esterline Company |
| 1988 | Federal Products Corp (gauge mfrs), Esterline Corp (Fed Products) |
| 1983 | Federal Products Corp (precision instruments), Esterline Corp (Fed Products) |
| 1978 | Federal Products Corp (precision instruments) |
| 1974 | Federal Products Corp (precision instruments) |
| 1969 | Federal Products Corp (dials & gauges) |
| 1964 | Federal Products Corp (dials & gauges) |
| 1961 | Federal Products Corp (gauge mfrs) |
| 1957 | Federal Products Corp (tool mfrs) |
| 1950 | Federal Products Corp (tool mfrs) |
| 1944 | Federal Products Corp (tool mfrs) |
| 1938 | Jewelers' Supply Co Inc., Federal Products Corp (tools) |

Copies of the directories are included in **Attachment 6**.

4.4.4 Other Historical Information

No additional information was provided to SAGE during this assessment.

5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

On September 13, 2021, Mrs. Bethany Mong of SAGE conducted a Site reconnaissance. Accessible areas of the Site were observed by walking. The adjoining properties were observed from roadways and from the Site boundaries.

The Site walkover was conducted to observe the possible indication of releases of petroleum products or hazardous materials. A plan depicting the approximate parcel boundaries and pertinent Site features observed during the walkover has been provided as **Figure 2**, and photographs of the Site are included in the **Photographs Attachment**.

5.2 General Site Setting & Site Reconnaissance Observations

The Site consists of one (1) parcel that comprise(s) approximately 0.39 of an acre. The parcel is zoned for M-2 use; adjacent lots are zoned for M-1 and M-2. According to the City of Providence, zone M-1 (Light Industrial District) is intended for light industrial and office park uses that accommodate a variety of manufacturing, assembly, storage of durable goods, and related activities provided that they do not pose toxic, explosive or environmental hazard in the City. The M-2 (General Industrial District) is intended to provide areas for moderate and heavy intensity industrial uses, especially for those uses that are potentially hazardous, noxious, or incompatible with the uses in other districts. Currently, the Site building is vacant. According to publicly available information, the parcel was most recently operated by Mahr, Inc. and utilized for administrative offices and product demonstrations.

5.2.1 Notable Site Walkover Conditions

The following notable conditions were observed during the Site reconnaissance. **Table 8** below identifies specific conditions noted in ASTM E1527-13 Section 9.4. Conditions that were identified at the Site are described in **Sections 5.2.2 and 5.2.3.**

Table 8
Notable Site Conditions
1144 Eddy Street
Providence, RI

| Feature | Interior | | | Exterior | |
|---|---|--|------------------------------|---|--|
| Unoccupied Spaces | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | N/A <input type="checkbox"/> | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> |
| Hazardous Materials | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | N/A <input type="checkbox"/> | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> |
| Petroleum Products | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | N/A <input type="checkbox"/> | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> |
| Storage Tanks | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | N/A <input type="checkbox"/> | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> |
| Pools of Liquid | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | N/A <input type="checkbox"/> | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> |
| Sumps | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> | N/A <input type="checkbox"/> | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> |
| Floor Drains | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | N/A <input type="checkbox"/> | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> |
| Drums | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | N/A <input type="checkbox"/> | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> |
| Unidentified Containers | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | N/A <input type="checkbox"/> | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> |
| Indications of Possible Polychlorinated Biphenyl (PCB)-Containing Equipment | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | N/A <input type="checkbox"/> | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> |
| Stains or Corrosion | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | N/A <input type="checkbox"/> | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> |
| Odors | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | N/A <input type="checkbox"/> | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> |
| Solid Waste | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> | N/A <input type="checkbox"/> | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> |
| Pits, Ponds or Lagoons | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> | N/A <input type="checkbox"/> | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> |
| Stressed Vegetation | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> | N/A <input type="checkbox"/> | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> |
| Wells | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> | N/A <input type="checkbox"/> | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> |
| Indications of Prior Environmental Investigation/Remediation | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> | N/A <input type="checkbox"/> | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> |
| Wastewater Discharge | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | N/A <input type="checkbox"/> | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> |

5.2.2 Interior Inspection

Mahr Inc. (Mahr) recently utilized the Site building for administrative and product demonstration

purposes. As part of business operation consolidation, Mahr relocated their operations to an off-Site location. At the time of the Site walkover, Mahr personnel were no longer occupying the building; however, demonstration equipment, office furniture and files were still located within the building. Due to the presence of a locked interior fenced-in area, utilized for the storage of accounting records, the northeast portion of the basement could not be visually observed. In addition, the passenger elevator pit was not accessible on the day of the Site Walkover. A summary of notable Site conditions visually observed on the day of the Site Walkover is provided below.

Basement:

- The basement includes a water treatment room, a utility area (i.e., compressor, boiler, hot water maker, electric meter, and electrical infrastructure including two (2) floor-mounted dry transformers, one (1) floor-mounted unlabeled transformer which is presumed to be dry, and an OHM storage area), general non-OHM storage areas, an interior fenced-in area utilized for the storage of accounting records, and access to an exterior utility area.
- Floor drains, and cleanouts, were observed throughout the basement. The floor drains are reportedly connected to the municipal sewer.
- Relic piping was located throughout. The Mahr Facility Manager did not have any historical plans for the Site when it was operated as “Plant 1” of Federal Products Corporations manufacturing facility.
- OHM observed within the utility area, includes, but is not limited to:
 - An unknown red substance in an unlabeled glass jar. No release of OHM was observed;
 - Six (6) five(5)-gallon plastic buckets with varying quantities of OHM. No release of OHM was observed;
 - One (1) parts washer-degreaser and associated 55-gallon steel drum. No release of OHM was observed;
 - One (1) 55-gallon steel drum in an overpack drum (Blaser Swisslube). OHM was observed in the base of the overpack drum. No release of OHM from the overpack drum was observed;
 - One (1) Kaeser Compressor oil/water separator (OWS) and associated oil storage container. OHM was observed on the concrete floor, at the base of the OWS. A floor drain, reportedly connected to the municipal sewer, was adjacent to this area. According to the Site’s Facility Manager, water from the OWS is discharged to the floor drain, and the oil is transferred to a 55-gallon steel satellite drum while awaiting off-Site disposal. Staining was observed around the floor drain; and,
 - One (1) 55-gallon steel satellite drum for the storage of waste compressor oil. The base of the drum had visible evidence of rust, and OHM staining was visible on the concrete floor.

First Floor:

- The first floor includes a former product demonstration area, vacant areas that appeared to be historically utilized for manufacturing purposes, storage areas, restrooms, a loading dock, and a former OHM storage area.
- The loading dock is located on the north side of the Site. According to the Site’s Facility Manager, the loading dock utilizes hydraulics. At the time of the Site Walkover, the equipment associated

with the loading dock was non-operational; therefore, and visual observation of the hydraulic system could not be completed.

- The former OHM storage area is located on the north side of the building. The floor and berm are constructed of concrete and appeared to be competent. Staining was visible; however, due to the condition of the concrete, a release of OHM to the environment was not apparent. A small capacity spill containment grated structure was located adjacent to the OHM storage area. At the time of the Site Walkover, the structure was utilized for the storage of two (2) bags of calcium chloride ice melt, a 1.25-gallon container of Roundup Max Control 365, and a one (1)-gallon container of Alki-Foam.
- Various chemicals were observed throughout the first floor including, but not limited to, one (1)-gallon container of Pure Bright Germicidal Ultra Bleach, Liquid-Plumber, and Windex.
- Vents were located throughout, and reportedly associated with dust and particulate collection. Select vents connect to a filtration system, located on the south side of the building.
- Water stains were visible on select ceiling tiles.
- Floor drains were observed within the restrooms, which are reportedly connected to the municipal sewer.
- One (1) mop sink was observed. No OHM staining was apparent.
- The eastern stairwell contained at least one (1) Sola Constant Wattage Ballast. No evidence of a release of OHM was observed.
- Relic piping was located throughout. The Mahr Facility Manager did not have any historical plans for the Site when it was operated as "Plant 1" of Federal Products Corporations manufacturing facility.

Second Floor:

- The second floor includes an open area, cubicles, a former IT room, a break room, offices, storage areas, and restrooms.
- Floor drains were observed within the restrooms, which are reportedly connected to the municipal sewer.
- One (1) utility sink was observed. The utility sink was stained; however, it is reportedly connected to the municipal sewer.
- Water stains were visible on select ceiling tiles.
- Various chemicals were observed throughout the second floor including, but not limited to, one (1)-gallon container of Clorox Bleach, Bio Renewables Glass Cleaner, miscellaneous janitorial supplies, and an open container labeled as Simple Green.
- Relic piping was located throughout. The Mahr Facility Manager did not have any historical plans for the Site when it was operated as "Plant 1" of Federal Products Corporations manufacturing facility.

Third Floor:

- The third floor includes a server room, storage areas, office space, and restrooms.
- Floor drains were observed within the restrooms, which are reportedly connected to the municipal sewer.

Penthouse:

- The penthouse is located on the eastern portion of the Site building and was utilized as a meeting room. The penthouse provides access to the roof.

Roof:

- The roof is constructed of membrane. The western portion of the roof is enclosed within a chain-linked perimeter fence.
- Rooftop gas-fired heating, ventilation, and air conditioning (HVAC) units are located on the roof.

Passenger Elevator:

- A passenger elevator is located on the western side of the Site building. Access to the elevator pit was not provided on the day of the Site Walkover.
- The machine room, located above the elevator, was accessible. Minor OHM staining was observed on the floor. Absorbent pads were located adjacent to the equipment and had minor OHM staining. No active leaks of OHM were observed.
- One (1) quart of Formula Shell SAE 10W-30 Motor Oil was located in the machine room.
- A review of the Electric Elevator Inspection Checklists documented that the most recent inspection occurred on August 20, 2020. No deficiencies were noted.

Freight Elevator:

- A freight elevator is located in the central portion of the Site building.
- A review of the Electric Elevator Checklist documented that the most recent inspection occurred on August 20, 2020. No deficiencies were noted.
- The machine room, located above the elevator, was accessible. No active leaks of OHM were observed.
- Staining was visible in the elevator pit. Physical access to the pit was not provided; therefore, construction details and condition of the pit floor are unknown (i.e., earthen/concrete floor, competent/degraded, etc.).

Transformer Room:

- A concrete constructed transformer room was accessible through the southern fenced-in area. The room is located beneath the portion of the Site building that is reportedly built slab-on-grade.
- Three (3) 100 kilovolt-ampere (kVA) transformers were located within this room. Each transformer was labeled as "Filled at the time of manufacture with non-PCB (less than 1 ppm) dielectric fluid".
- One (1) transformer had visible staining around the upper rim and down the exterior. The concrete floor was competent in the area of the transformer.

5.2.3 Exterior Inspection

During the exterior walkover, SAGE noted an access way which leads to a sub-grade vault containing infrastructure which appeared to be associated with a former steam heating system. Due to access constraints, visual observation was limited from the ground level. According to Mahr's Site Facility Manager, this vault is classified as a Confined Space, and access was prohibited. A summary of notable Site conditions visually observed on the day of the Site Walkover are provided below.

- A fenced in area, located on the south side of the Site building, was accessible from the basement. This area contained compressor units, an air filtration unit and associated plastic container to store condensate [approximate fifteen (15)-gallon capacity], access to a transformer room, access to a sub-grade vault through a wooden bulkhead, drainage grates, and a sub-grade sump-like vault containing relic infrastructure and water.
- Staining was observed on the exterior of the approximate fifteen (15)-gallon capacity plastic container which is used to store condensate.
- The sub-grade vault was accessible through a wooden bulkhead. According to the Site's Facility Manager, the vault is classified as a Confined Space, and access was prohibited due to safety concerns. At the time of the Site Walkover, the Facility Manager was unaware that this vault existed; therefore, no details about the historical usage is known. The vault contained infrastructure that appears to be associated with a former steam heating system. A site gauge, valves, and metal piping were visible. Piping was observed to exit this sub-grade vault and head in the direction of the sub-grade sump-like vault which contained relic infrastructure and water.
- An American Standard natural gas forced air furnace with cooling unit, and one (1) thirty (30)-yard roll-off dumpster, are located on the northern side of the Site building.
- The loading dock is accessible on the north side of the Site building.
- Overhead lines connect to the southwest side of the building.
- A capped pipe was located on the northwest corner of the Site. Per the Mahr Facilities Manager, this pipe is a former fencepost.

6.0 VAPOR ENCROACHMENT SCREEN VIA ASTM E2600-15

Under the ASTM E1527 – 13 standard, vapor impacts must now be considered, similar to the way potential soil and groundwater impacts have been evaluated in the past. ASTM Designation E2600 – 15 *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions* (2015) provides a method of identifying a vapor encroachment condition (VEC), which is the presence or likely presence of chemicals of concern (COC) vapors in sub-surface of the subject Site caused by the release of vapors from contaminated soil or groundwater either on or near the Site. The Vapor Encroachment Screen (VES) process is a two-tiered screening process.

The conclusion[‡] of a VES is (1) a VEC exists at the subject Site; or (2) a VEC does not exist at the subject Site, however the determination that a VEC exists at the subject Site does not necessarily represent an REC.

6.1 Tier 1 Screening Evaluation

The purpose of a Tier 1 Screening Evaluation in conjunction with the Phase I ESA is to evaluate whether a VEC exists at the subject Site by using information collected during the course of the Phase I ESA process. Information evaluated for the Tier 1 Screen includes past, present, and anticipated usage and oil and/or hazardous material usage at the Site, the Site's geological and hydrogeological setting, the presence or potential presence of preferential pathways for contaminant migration, and environmental records for

[‡] The VES is intended to reduce, but not eliminate, uncertainty regarding whether or not a VEC exists in connection with the subject Site, and evaluations conducted during the course of this VES are intended to be non-exhaustive. Additionally, the performance of an invasive Tier 2 Screen is not within the Scope of an ASTM Phase I ESA and is considered an Additional Service.

the Site and surrounding properties.

The VES Guide recommends reviewing environmental records for properties within 1/10-mile of the Site to evaluate whether a VEC exists from petroleum hydrocarbon COCs, and a radius of 1/3-mile surrounding the Site to evaluate whether a VEC exists from any other volatile non-petroleum hydrocarbon COCs. **Table 9**, below summarizes the number of properties identified within the target VES search distance, which are located in a *presumed* upgradient hydrogeologic direction based on files reviewed at RIDEM. This information was obtained through a review of records provided in the EDR report.

Table 9
Tier 1 Screening Table Summary
1144 Eddy Street
Providence, RI

| Database | Site Inclusion | Non-Petroleum Contaminated Properties (1/3-mile Search Radius) | Petroleum Contaminated Properties (1/10-mile Search Radius) |
|---|----------------|--|---|
| NPL | No | 0 | 0 |
| CERCLIS | No | 0 | 0 |
| State Equivalent CERCLIS | No | 4 | 2 |
| SWF | No | 0 | 0 |
| RCRA – SITE ONLY | Yes | N/A | N/A |
| RCRA CORRACTS | No | 0 | 0 |
| RCRA non-CORRACTS | No | 0 | 0 |
| State/Tribal USTs – SITE ONLY | No | N/A | N/A |
| State/Tribal LUSTs | No | 2 | 1 |
| ERNS | No | 0 | 0 |
| Federal/State Brownfields | No | 0 | 0 |
| Federal/State Institutional Control – SITE ONLY | No | N/A | N/A |

Based upon the results of the Tier 1 Screen, a VEC exists based on based on the historical usage of the property as a manufacturing facility, the historical usage of the Site as a manufacturing facility since at least 1938, the proximity of the release at the National Grid Field’s Point Substation, located immediately south of the Site, and the Sites location within an industrialized area.

6.2 Tier 2 Screening Evaluation

If a VEC is found to exist for the subject Site during the performance of the Tier 1 Screen, a Tier 2 invasive or non-invasive Screen may be conducted to obtain greater certainty of the presence of a VEC. A non-invasive Tier 2 Screen applies numeric screening criteria to existing soil, soil gas, and/or groundwater analytical data for the Site and/or surrounding properties and evaluates the influence of off-Site contaminated properties with respect to existing information pertaining to known COCs and known or inferred direction of groundwater flow. A Tier 2 invasive Screen involves the collection of soil, soil gas, and/or groundwater analytical data at the subject Site.

Based on the information obtained during the course of this assessment and the conclusion of the Tier 1 Screen, a VEC exists at the subject Site. As such, SAGE conducted a non-invasive Tier 2 Screening Evaluation to obtain greater certainty which included a review of applicable soil, soil gas, and/or groundwater analytical information pertaining to surrounding properties within the target VES search radii. Based on a review of files maintained by RIDEM for properties within the target VES radii, an invasive Tier 2 Screening Evaluation is necessary to confirm whether a VEC exists at the Site due the historical usage of the Site as a manufacturing facility since at least 1938, the proximity of the release at the National Grid Field's Point Substation, located immediately south of the Site, and the Sites location within an industrialized area. This information is further discussed in **Section 4.1** of this report.

7.0 INTERVIEWS

7.1 Interview with Owner

Mr. Arthur Tremblay, the Facilities Manager, and representative of Mahr, Inc. (the current Site Owner/Occupant), provided access and information about the Site, which has been incorporated into this assessment.

7.2 Interview with Local Government Officials

Local government officials were contacted as part of this assessment, including staff at the City of Providence Fire Prevention Office and local offices. Information provided has been incorporated into this assessment.

7.3 Interview with Others

No other person with any personal knowledge of the Site was interviewed.

8.0 ADDITIONAL SERVICES

No additional services were provided for this assessment.

9.0 FINDINGS & CONCLUSIONS

SAGE has performed a Phase I ESA of the Site in general conformance with the scope and limitations of ASTM Practice E1527-13 and the EPA's AAI Rule and those exceptions identified in this report. Any exceptions to or deletions from this practice are described in **Section 1.6** of this report titled "Deviations".

9.1 Findings

The following summarizes key findings of the Phase I ESA based on observations during the Site walkover, review of existing historical resources, and interviews with current or past owners. Included in the summary are known or suspected RECs, CRECs, HRECs and *de minimis* conditions.

Suspected RECs and *de minimis* conditions at the Site:

- Floor Drains are located throughout the Site building;

- A Kaeser Compressor OWS was observed in the basement of the Site building. OHM was observed on the concrete floor, at the base of the OWS;
- A 55-gallon steel satellite drum, utilized for the storage of waste compressor oil is located in the basement of the Site building. The base of the drum had visible evidence of rust, and OHM staining was visible on the concrete floor;
- OHM is stored in the basement of the Site building, including, but not limited to, a 55-gallon metal drum located within an overpack drum, six (6) five (5)-gallon plastic buckets with varying quantities of OHM, one (1) parts washer-degreaser and associated 55-gallon steel drum, and an unlabeled glass jar containing an unknown red substance;
- The former OHM storage area is located on the north side of the Site building, adjacent to the overhead door;
- Staining was visible in the freight elevator pit;
- A 100 kVA transformer, located within the Site building, was observed to have staining around the upper rim and down the exterior;
- Staining was observed on the exterior of the approximate fifteen (15)-gallon capacity plastic container which is used to store condensate;
- Subgrade Infrastructure which appeared to be associated with a former steam heating system. This subgrade infrastructure is located on the south side of the Site building, within the fenced-in area. Relic piping was observed to lead from this area to a sub-grade sump-like structure which contained water;
- The Site has been utilized for manufacturing of precision machining measuring devices since at least 1938 through the early 1990's, and photo chemical operations from an unknown date through 1990. In addition to manufacturing, the Site was occupied by Jewelers Supply Company. The Site is listed in the FINDS, Spills, PRP and US Airs database;
- The Site is located within an industrialized area of Providence, with documented land filling;
- The National Grid Fields Point Substation, located south of the Site, across Cass Street, had a release of PCBs and TPH in 1994; and,
- A capped metal pipe was observed in the landscaping, located on the northwest side of the Site, at the intersection of Eddy Street and Ernest Street.

ASTM E2600-15 VAPOR ENCROACHMENT SCREEN

During this assessment, SAGE also conducted a Vapor Encroachment Screen (VES) via ASTM E2600-15. Based upon the results of the Tier I Screening, SAGE has determined a Vapor Encroachment Condition (VEC) exists based on the historical usage of the Site as a manufacturing facility since at least 1938, the proximity of the release at the National Grid Field's Point Substation, located immediately south of the Site, and the Sites location within an industrialized area.

9.2 OPINIONS

Based upon the results of this assessment and the ASTM E1527-13 definitions of a REC, HREC, and CREC, the following opinions have been developed by SAGE along with a rationale for such determinations.

Non-REC Findings:

- **Floor Drains:** Floor Drains are located throughout the Site building. Reportedly all floor drains are connected to the municipal sewer; therefore, the presence of these floor drains do not represent a REC at this time. According to the Site Facility Manager, the discharge to the municipal sewer
- **Capped Metal Pipe:** A threaded capped metal pipe was observed in the landscaped area, on the northwest portion of the Site, at the intersection of Eddy Street and Ernest Street. Per the Mahr Facilities Manager, this capped metal pipe is an old fencepost, and not associated with a UST.
- **OHM Storage Area in the Basement:** OHM is stored in the basement of the Site building, including, but not limited to, a 55-gallon metal drum located within an overpack drum, six (6) five (5)-gallon plastic buckets with varying quantities of OHM, one (1) parts washer-degreaser and associated 55-gallon steel drum, and an unlabeled glass jar containing an unknown red substance. No release to the environment was observed; however, product was visible at the base of the overpack drum, and select five (5) gallon buckets did not have lids. SAGE recommends that the waste OHM be properly containerized, labeled, and properly disposed.
- **Former OHM Storage Area:** The former OHM storage area is located on the north side of the building. The floor and berm are constructed of concrete and appeared to be competent. Staining was visible; however, due to the condition of the concrete, a release of OHM to the environment was not apparent. A small capacity spill containment grated structure was located adjacent to the OHM storage area. At the time of the Site Walkover, the structure was utilized for the storage of two (2) bags of calcium chloride ice melt, 1.25-gallon container of Roundup Max Control 365, and a one (1)-gallon container of Alki-Foam.

REC Findings:

- **Oil/Water Separator:** A Kaeser Compressor OWS and associated oil storage container are located in the basement of the Site building. The OWS is utilized to manage waste generated by the compressor. OHM was observed on the concrete floor, at the base of the OWS. A floor drain, reportedly connected to the municipal sewer, was adjacent to this area. According to the Site's Facility Manager, water from the OWS is discharged to the floor drain, and the oil is transferred to a 55-gallon steel satellite drum while awaiting off-Site disposal. Staining was observed around the floor drain. At this time, the condition of the underground piping associated with the floor drain is unknown. According to the Manager of HSEQ at Mahr, effluent samples are collected from the OWS, in accordance with their Narragansett Bay Commission Permit. Effluent sampling occurs twice a year in April and October; however, due to COVID-19, and lack of activity at the Site, the last effluent sample was collected in October of 2019. Based on the laboratory analytical report, the concentration of oil and grease from the OWS was 139 mg/l. A copy of the permit and associated discharge limits were not provided.
- **Satellite Drum:** A 55-gallon steel satellite drum, utilized for the storage of waste compressor oil is located in the basement of the Site building. The base of the drum had visible evidence of rust, and OHM staining was visible on the concrete floor. The satellite drum is located in proximity to a floor drain, which reportedly discharges to the municipal sewer. At this time, the condition of the underground piping associated with the floor drain is unknown.
- **Freight Elevator:** Staining was visible in the freight elevator pit. Physical access to the pit was not

- provided; therefore, the condition of the pit floor is unknown (i.e., competent/degraded, etc.).
- **Transformer:** A concrete constructed transformer room is located on the southern side of the Site building. Three (3) 100 kVA transformers were located within this room. At the time of the Site Walkover, one (1) transformer had visible staining around the upper rim and down the exterior. The concrete floor was competent in the area of the transformer. The transformers are labeled as containing non-PCB (less than 1 ppm) dielectric fluid. Although evidence of a release to the environment was not observed, the condition/competency of the transformer is unknown and represents a REC.
 - **Air Filtration Condensate Collection Container:** Staining was observed on the exterior of the approximate fifteen (15)-gallon capacity plastic container which is used to store condensate. The integrity of this container is unknown and located adjacent to a stormwater drainage grate. This represents a REC.
 - **Sub-Grade Vault and Exterior Sump-Like Structure:** Subgrade infrastructure which appeared to be associated with a former steam heating system, was observed on the southern side of the Site building, within the fenced-in area. Relic piping was observed to lead from this area to a sub-grade sump-like structure which contained water;
 - **Historical Usage of the Site:** The Site has been utilized for the manufacturing of precision machining measuring devices since at least 1938 through the early 1990's, photo chemical operations from an unknown date through 1990, and occupied by the Jewelers Supply Company in 1938. Historically, the Site generated hazardous waste; however, the waste streams were merged with those generated at 1139 Eddy Street; therefore, at this time, it is unknown which waste streams were generated at the Site. Limited information exists regarding the historical layout of the Site building, and associated manufacturing infrastructure. The Mahr Facility Manager did not have any historical plans for the Site when it was operated as "Plant 1" of Federal Products Corporations manufacturing facility; however, an "acid line" is depicted on a document provided by the City of Providence Public Works Department. No additional information about this acid line was obtained during the course of this assessment (i.e., holding tank, discharge location, etc.). The Site is listed in the FINDS, Spills, PRP and US Airs database; however, at this time, the inclusion in these databases appear to be associated with the Federal Products Corporation/Mahr facility located at 1139 Eddy Street, and/or off-Site locations. The usage of the Site for manufacturing represents a REC.
 - **National Grid – Field's Point Substation:** On September 30, 1994, RIDEM was verbally notified that staining that was observed on concrete foundations that supported oil-filled electrical equipment. Subsequent soil sampling documented the presence of PCB and TPH contaminated soil in excess of the applicable RIDEM DECs. Remedial actions completed included the excavation and off-site disposal of 168.85 tons of impacted soil. The post-excavation soil samples documented the presence of residually impacted TPH soil (14,400 mg/kg) which exceeded the RIDEM R-DEC of 500 mg/kg and the I/C-DEC of 2,500 mg/kg, and PCB impacted soil (4 mg/kg) which was reported to be less than the applicable RIDEM R-DEC and I/C-DEC of 10 mg/kg. No additional excavations were completed in the area of the TPH contamination due to structural concerns. The vertical and horizontal extent of TPH contaminated soil was not delineated, and an assessment of groundwater was not completed. The area of the TPH contaminated soil is located approximately 45 to 55 feet south of the Site boundary. Therefore, based on the location of the TPH release area (45 to 55 feet south of the Site), and the local documented groundwater flow

direction in a northeasterly direction, it is possible the release noted at this location could have impacted the Site. **Surrounding Site Usage:** The Site is located within an industrialized area of Providence, with documented land filling. Local land usage documented on the Sanborn Maps throughout the last century includes, but is not limited to, manufacturing (i.e., jewelry, plastics, metals), a petroleum fuel distribution facility, and an electrical substation. The surrounding land usage represents a REC.

HREC Findings:

- Conditions indicative of a HREC were not identified during the course of this assessment.

CREC Findings:

- Conditions indicative of a CREC were not identified during the course of this assessment.

9.3 CONCLUSION

SAGE has performed a Phase I ESA of the Site in general conformance with the scope and limitations of ASTM Practice E1527-13 and the EPA's AAI Rule and those exceptions identified in this report. Based on the information further described herein, it is the opinion of SAGE that a LSI be conducted to evaluate the identified RECs. The LSI would include a general evaluation of Site soils as well as groundwater, and given the current understanding that the Site may be considered for a school, SAGE recommends as part of the LSI, a sub-slab soil gas assessment be performed. Additional focused areas of exploration as part of the LSI would include the subgrade infrastructure that appears to be associated with a former steam heating system, located on the southern side of the Site structure, and the visually stained surface in proximity to a transformer located within the transformer room.

Furthermore, although outside the scope of this Phase I ESA, SAGE recommends that all OHM containers be properly labeled and stored, and waste disposal documentation be maintained on the premises.

10.0 SIGNATURES AND QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

This report summarizes the findings of SAGE's Phase I ESA. The Phase I ESA was based upon Site reconnaissance, interviews with public and private parties as well as a review of all appropriate federal, state and local files. The information and findings contained within the Environmental Site Assessment are true and correct to the best of SAGE's knowledge.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in 312.10 of 40 CFR 312.10. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR § 312.

Qualified professionals experienced in conducting Phase I Environmental Site Assessments have prepared this report.

11.0 LIMITATIONS

Data obtained from public agencies, Site inspections, and data mapping sources were used in the characterization of this Site. The accuracy of the conclusions derived from these data is based solely on the accuracy of the data reported and/or supplied. Should information be made available concerning the Site which is not included in this report, it should be reported to SAGE so that findings, conclusions, and/or recommendations can be altered and modified (if necessary).

Events occurring on the Site after on-Site inspection are beyond the scope of this report. As such, SAGE makes no expressed or implied representations, warranties or guarantees regarding any changes in the condition of the premises after the date of the on-Site inspection.

Any qualitative or quantitative information regarding the Site, which was not available to SAGE at the time of this assessment, may result in modification(s) to the conclusions and/or representations made in this report. The Phase I ESA and VES are intended to be non-exhaustive assessments and as such, information reviewed during the assessment is limited to that which is practically reviewable as defined in ASTM E1527 – 13 (3.2.69). This report is intended to reduce the uncertainty regarding the potential of a Recognized Environmental Condition to be present at the Site, however no environmental assessment can wholly eliminate uncertainty regarding the potential Recognized Environmental Conditions to be present at the Site.

Due to the fact that geological and soil formations are inherently random, variable, and indeterminate (heterogeneous) in nature, the professional services and opinions provided by SAGE under our agreement are not guaranteed to be a representation of complete Site conditions, which are variable and subject to change with time or as the result of natural or man-made processes. Although our services are extensive, opinions, findings, and conclusions presented are limited to and by the data supplied, reported, and obtained. Additionally, unless specified or otherwise included herein, this assessment did not include an evaluation of business environmental risk as defined in ASTM E1527 – 13 (3.2.11) and non-scope considerations as identified in ASTM E1527 – 13 (13). Such non-scope considerations include, but are not limited to, evaluation of: asbestos-containing materials, biological agents, radon, lead-based paint, lead in drinking water, wetlands, regulatory compliance, industrial hygiene, health and safety, OSHA compliance, cultural and historic resources, ecological resources, endangered species, indoor air quality, electromagnetic fields, formaldehyde, high-voltage power lines, non-point sources or best management practices for silviculture. Under the terms of the agreement no attempt was made to determine the compliance or regulatory status of present or former owners or operators of the Site with respect to federal, state, municipal, environmental, and land use laws or regulations.

SAGE has retained a copy of this report. No deletions or additions are permitted without the written consent of SAGE. This report, including the data, maps, and figures contained herein, are not suitable for use in its present form, for any ongoing or pending litigation. Use of this report in whole or in part by parties other than those authorized by SAGE is prohibited.

User Provided Information

In order to qualify for one of the Landowner Liability Protections identified in the Phase I ESA Standard 1527-13, the user must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete for the Phase I ESA.

| YES | NO | QUESTION | IF "YES" PLEASE DESCRIBE |
|-------------------------------------|-------------------------------------|---|---|
| <input type="checkbox"/> | <input checked="" type="checkbox"/> | Did a search of recorded land title records identify any environmental liens filed or recorded against the property under federal, tribal, state or local law? | |
| <input type="checkbox"/> | <input checked="" type="checkbox"/> | Did a search of recorded land title records identify any activity use limitations, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law? | |
| <input type="checkbox"/> | <input checked="" type="checkbox"/> | Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business? | |
| <input checked="" type="checkbox"/> | <input type="checkbox"/> | Does the purchase price being paid for this property reasonably reflect the fair market value? If you conclude that there is a difference, have you considered whether the lower purchase is because contamination is known or believed to be present at the property? | |
| <input checked="" type="checkbox"/> | <input type="checkbox"/> | Do you know the past uses of the property? | OFFICE, TESTING LAB, MFG. OF EQUIPMENT |
| <input type="checkbox"/> | <input checked="" type="checkbox"/> | Do you know of specific chemicals that are currently or once were present on the property? | |
| <input type="checkbox"/> | <input checked="" type="checkbox"/> | Do you know of any spills or other chemical releases that have been taken place at the property? | |
| <input type="checkbox"/> | <input checked="" type="checkbox"/> | Do you know of any environmental cleanups that have taken place at the property? | |
| <input type="checkbox"/> | <input checked="" type="checkbox"/> | Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property? | |
| <input type="checkbox"/> | <input checked="" type="checkbox"/> | Are there helpful documents available that could inform us about past and current uses on the property? (Such information could be MSDS, environmental permits and reports, tank registrations, safety plans, etc.) If "yes" is there the possibility of obtaining a copy? | |
| <input type="checkbox"/> | <input checked="" type="checkbox"/> | Is there a legal description and recorded plat available? If "yes" please provide Deed Book/Plat Book and Page Number if possible. | |
| <input checked="" type="checkbox"/> | <input type="checkbox"/> | Do you have the current property owner's contact information? If "yes" please provide. | FEDERAL PRODUCTS CORP. 1139 Eddy St. Prov RI 02905 800-343-2050 |
| <input checked="" type="checkbox"/> | <input type="checkbox"/> | How is the property currently zoned? Commercial, residential, industrial, mixed use? Are there any zoning restrictions the limit the activity use of the property? (i.e. Chesapeake Bay Preservation Area, Groundwater Protection Area, 50 or 100 year Flood zone). | M-1 |

Environmental Interest/Information System:
Rhode Island - Permits, Licenses and Other Vital Environmental Records (RI-PLOVER) is the Rhode Island Department of Environmental Management's regulatory programs' information management system. US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Hazardous Waste Summary:

Waste Code: D001

Waste Description: IGNITABLE WASTE

Waste Code: D002

Waste Description: CORROSIVE WASTE

Waste Code: D004

Waste Description: ARSENIC

Waste Code: D006

Waste Description: CADMIUM

Waste Code: D007

Waste Description: CHROMIUM

Waste Code: D008

Waste Description: LEAD

Waste Code: F001

Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING:
TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE,
1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED
FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING
CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF
ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED
IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE
SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003

Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005

Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F006

Waste Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Waste Code: F007

Waste Description: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

Waste Code: F008

Waste Description: PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

US BROWNFIELDS:

Name: MEETING STREET NATIONAL CENTER OF EXCELLENCE

Address: 1000 EDDY STREET

City,State,Zip: PROVIDENCE, RI 02905

Recipient Name: Meeting Street

Grant Type: Cleanup

Property Number: Plat 55, Lot 435

Parcel size: 7

Latitude: 41.80128

Longitude: -71.405216

HCM Label: Interpolation-Map

Map Scale: 1:50,000

Point of Reference: Entrance Point of a Facility or Station

Highlights: Cleanup activity has not begun. (PPF - Meeting Street National Center of Excellence, 3/9/05) This activity helped bring the project to the attention of the Rhode Island Dept of Transportation, which subsequently donated to Meeting Street property along I95 and the Thurbers Avenue exit ramp. The addition of that property which was undeveloped and likely to remain so, presented an opportunity for Meeting Street to approach the City of Providence about developing an athletic field on the property that would be available to Meeting Street and the surrounding neighborhood. Those discussions are ongoing and positive. (PPF - 3/5/07) Former Use: furniture warehouse and produce distributor

Grant Type: Cleanup
Property Number: Plat 55, Lot 435
Parcel size: 7
Latitude: 41.80128
Longitude: -71.405216
HCM Label: Interpolation-Map
Map Scale: 1:50,000
Point of Reference: Entrance Point of a Facility or Station
Highlights: Cleanup activity has not begun. (PPF - Meeting Street National Center of Excellence, 3/9/05) This activity helped bring the project to the attention of the Rhode Island Dept of Transportation, which subsequently donated to Meeting Street property along I95 and the Thurbers Avenue exit ramp. The addition of that property which was undeveloped and likely to remain so, presented an opportunity for Meeting Street to approach the City of Providence about developing an athletic field on the property that would be available to Meeting Street and the surrounding neighborhood. Those discussions are ongoing and positive. (PPF - 3/5/07) Former Use: furniture warehouse and produce distributor
Datum: World Geodetic System of 1984

Recipient Name: Meeting Street
Grant Type: Cleanup
Property Number: Plat 55, Lot 435
Parcel size: 7
Latitude: 41.80128
Longitude: -71.405216
HCM Label: Interpolation-Map
Map Scale: 1:50,000
Point of Reference: Entrance Point of a Facility or Station
Highlights: Cleanup activity has not begun. (PPF - Meeting Street National Center of Excellence, 3/9/05) This activity helped bring the project to the attention of the Rhode Island Dept of Transportation, which subsequently donated to Meeting Street property along I95 and the Thurbers Avenue exit ramp. The addition of that property which was undeveloped and likely to remain so, presented an opportunity for Meeting Street to approach the City of Providence about developing an athletic field on the property that would be available to Meeting Street and the surrounding neighborhood. Those discussions are ongoing and positive. (PPF - 3/5/07) Former Use: furniture warehouse and produce distributor

Name: NATIONAL PLATING - LOT 810
Address: 946 EDDY STREET
City,State,Zip: PROVIDENCE, RI 02905
Recipient Name: MSC Realty
Grant Type: Cleanup
Property Number: Plat 47, Lot 810
Parcel size: .16
Latitude: 41.8022556
Longitude: -71.4062455
HCM Label: -
Map Scale: -
Point of Reference: -

Highlights: The site is currently capped and construction on a 28,000 square foot early childhood education and development center is scheduled to begin in fall 2019. Upon its completion (fall 2021), the building will be home to all of Meeting Street's early childhood programs and serve as a resource hub for Rhode Island families and early learning practitioners. Former Use: The Site was undeveloped until at least the 1920s and was used as an automotive junkyard in the 1950s, followed by an automotive repair shop and dealership. More recently, the Site was used for electroplating operations. The Site is currently vacant/unused, and consists of an asphalt paved surface and a former building foundation.

Point of Reference: -

Highlights: The site is currently capped and construction on a 28,000 square foot early childhood education and development center is scheduled to begin in fall 2019. Upon its completion (fall 2021), the building will be home to all of Meeting Street's early childhood programs and serve as a resource hub for Rhode Island families and early learning practitioners. Former Use: The Site was undeveloped until at least the 1920s and was used as an automotive junkyard in the 1950s, followed by an automotive repair shop and dealership. More recently, the Site was used for electroplating operations. The Site is currently vacant/unused, and consists of an asphalt paved surface and a former building foundation.

Point of Reference: -

Highlights: The site is currently capped and construction on a 28,000 square foot early childhood education and development center is scheduled to begin in fall 2019. Upon its completion (fall 2021), the building will be home to all of Meeting Street's early childhood programs and serve as a resource hub for Rhode Island families and early learning practitioners. Former Use: The Site was undeveloped until at least the 1920s and was used as an automotive junkyard in the 1950s, followed by an automotive repair shop and dealership. More recently, the Site was used for electroplating operations. The Site is currently vacant/unused, and consists of an asphalt paved surface and a former building foundation.

Database Descriptions

NPL: NPL National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices. NPL - National Priority List Proposed NPL - Proposed National Priority List Sites.

NPL Delisted: Delisted NPL The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate. Delisted NPL - National Priority List Deletions

CERCLIS: SEMS SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL. SEMS - Superfund Enterprise Management System

NFRAP: SEMS-ARCHIVE SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site. SEMS-ARCHIVE - Superfund Enterprise Management System Archive

RCRA COR ACT: CORRACTS CORRACTS identifies hazardous waste handlers with RCRA corrective action activity. CORRACTS - Corrective Action Report

RCRA TSD: RCRA-TSDF RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste. RCRA-TSDF - RCRA - Treatment, Storage and Disposal

RCRA GEN: RCRA-LQG RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. RCRA-LQG - RCRA - Large Quantity Generators RCRA-SQG - RCRA - Small Quantity Generators. RCRA-VSQG - RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators).

Federal IC / EC: US ENG CONTROLS A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. US ENG CONTROLS - Engineering Controls Sites List US INST CONTROLS - Institutional Controls Sites List.

Database Descriptions

ERNS: ERNS Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances. ERNS - Emergency Response Notification System

State/Tribal CERCLIS: SHWS This list includes sites that have been investigated under the Federal CERCLIS program (SFA sites) as well as sites that have notified under the state program or have been investigated for hazardous substances (HWM sites). SHWS - List of CERCLIS and State Sites in RI

State/Tribal SWL: SWF/LF Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites. SWF/LF - Solid Waste Management Facilities

State/Tribal LTANKS: LUST The LUST Case List is a summary of UST Facilities in RI with leaking USTs, which includes information on the date of release discovery and the status of the LUST Case (active, soil removal only, or inactive). LUST - LUST Case List INDIAN LUST R6 - Leaking Underground Storage Tanks on Indian Land. INDIAN LUST R5 - Leaking Underground Storage Tanks on Indian Land. INDIAN LUST R10 - Leaking Underground Storage Tanks on Indian Land. INDIAN LUST R9 - Leaking Underground Storage Tanks on Indian Land. INDIAN LUST R8 - Leaking Underground Storage Tanks on Indian Land. INDIAN LUST R7 - Leaking Underground Storage Tanks on Indian Land. INDIAN LUST R1 - Leaking Underground Storage Tanks on Indian Land. INDIAN LUST R4 - Leaking Underground Storage Tanks on Indian Land.

State/Tribal Tanks: UST The UST Master List is a summary of registered UST Facilities in RI, which includes information on abandoned, in use, permanently closed and temporarily closed USTs. UST - UST Master List AST - Aboveground Storage Tanks. INDIAN UST R6 - Underground Storage Tanks on Indian Land. INDIAN UST R1 - Underground Storage Tanks on Indian Land. INDIAN UST R10 - Underground Storage Tanks on Indian Land. INDIAN UST R4 - Underground Storage Tanks on Indian Land. INDIAN UST R5 - Underground Storage Tanks on Indian Land. INDIAN UST R7 - Underground Storage Tanks on Indian Land. INDIAN UST R9 - Underground Storage Tanks on Indian Land. INDIAN UST R8 - Underground Storage Tanks on Indian Land.

State/Tribal IC / EC: AUL This list was developed by RIDEM for use as a general reference and are not meant to be legally authoritative source for the location of hazardous materials, nor for the status, condition or permissible use of a site. AUL - Waste Management Sites with Environmental Land Use Restrictions

ST/Tribal Brownfields: BROWNFIELDS Brownfields are real properties where the expansion, redevelopment or reuse may be complicated by the actual or potential presence of a hazardous substance, pollutant, or contaminat. BROWNFIELDS - Brownfields Site List

US Brownfields: US BROWNFIELDS Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs. US BROWNFIELDS - A Listing of Brownfields Sites

Other Haz Sites: US CDL A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments. US CDL - Clandestine Drug Labs PFAS - Sites With Known PFAS Contamination.

Database Descriptions

Spills: HMIRS Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT. HMIRS - Hazardous Materials Information Reporting System SPILLS - Oil & Hazardous Material Response Log/Spill Report. SPILLS 90 - SPILLS90 data from FirstSearch.

Other: RCRA NonGen / NLR RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste. RCRA NonGen / NLR - RCRA - Non Generators / No Longer Regulated FEDLAND - Federal and Indian Lands. TSCA - Toxic Substances Control Act. June 12, 1995

DONALD SQUIRES
DEPARTMENT OF ENVIRONMENTAL MANAGEMENT
291 PROMENADE STREET
PROVIDENCE, RI 02907

Dear Mr. Squires,

Per your suggestion, from our phone conversation Saturday afternoon, June 10, here is a synopsis of the activities concerning the small oil release I reported to you in that conversation.

The cause of the estimated 4 gallon release was a hydraulic hose leak on a service contractor's parking lot sweeper truck. His driver failed to observe the fine spray he left over some 500 square feet of two of Federal Products lots and part of Aldrich Street. This occurred late Friday night. There was no third shift maintenance coverage, thus supervision on Saturday put down sorbent mats on several wetted areas and reported the incident to me. I called the spill response authorities once the scope of the release was identified and our in-plant team was effecting a cleanup. The first call, at noon was to dispatcher Swanson at the DEM to whom I reported this as a courtesy call. It is my understanding that less than 10 gallons of hydraulic oil had been spilled and it had not been released to sewers. Next, I contacted Mike Bessina at NBC, at which time you called.

At 1:15, as we were continuing cleanup, 2 Coast Guard Reserve officers came and agreed that we were taking adequate steps to protect the environment and preserve the parking lot. All sorbent material (approx. 10 cu. ft.) was recovered on Sunday morning by vacuum truck, and was placed in a 1 yard container of 'oily debris' (a Federal Products' production process waste stream) for proper disposal as a regulated waste.

This morning , in the rain, only a very slight oil sheen was discernible in some parts of the cleanup area.

Your professional manner in assisting us in this matter is sincerely appreciated. If anything else is required of Federal Products or its' sweeper contractor 'J & J Sweeping Inc.', please call me at 784-3305.

Sincerely,

Alan Peterson
Facility / Environmental Engineer

Plan # 253

Referenced: 1144 EDDY STREET - FEDERAL PRODUCTS
ABOVE GROUND STORAGE TANK

Gentlemen:

The plans as submitted for the above referenced property appear to be in compliance with Chapter 23-28.21 and related Chapters of the Rhode Island Fire Safety Code.

This letter of plan review may not be used for the purpose of obtaining a building permit. Only plans which have been stamped "APPROVED" and signed by the plan reviewer may be used for such a purpose.

Any violations of the Rhode Island Fire Safety Code which may have been overlooked in the course of this inspection are subject to correction under the provisions of the Rhode Island Fire Safety Code.

If you have any questions concerning this plan review, please contact me at (401) 421-8290.

Yours truly,

George D. Calise
Assistant Deputy State Fire Marshal

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Sage Environmental, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Sanborn® Library search results

Certification #: CE81-463E-B478

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Sage Environmental, Inc. (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

APPENDIX 5

Friday, May 26, 2023

Attn:
Sage Environmental Inc.
301 Friendship Street
Providence RI 02903

Project ID: S3977-1144 EDDY
SDG ID: GCO12835
Sample ID#s: CO12835 - CO12837

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Sincerely yours,

A handwritten signature in black ink that reads "Phyllis Shiller". The signature is written in a cursive style.

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

Analysis Comments

May 26, 2023

SDG I.D.: GCO12835

The following analysis comments are made regarding exceptions to criteria not already noted in the Analysis Report or QA/QC Report:

AIRSIM

CHEM20 05/24/23-1: CO12835, CO12836, CO12837

The following Continuing Calibration compounds did not meet % deviation criteria: 1,1,2,2-Tetrachloroethane(sim) 37%L (30%), 1,2,4-Trichlorobenzene 33%L (30%), 1,2-Dichlorobenzene(sim) 44%L (30%)

The following Continuing Calibration compounds did not meet Maximum % deviation criteria: 1,1,2,2-Tetrachloroethane(sim) 37%L (30%), 1,2,4-Trichlorobenzene 33%L (30%), 1,2-Dichlorobenzene(sim) 44%L (30%)
