

The following document is a summary of the list of **disinfectants** that have been registered by the Environmental Protection Agency (EPA) to kill COVID-19. EPA refers to this list as List-N. EPA reviews and registers antimicrobial pesticides, which include disinfectants for use on pathogens like SARS-CoV-2, the coronavirus that causes COVID-19. Once a pesticide is registered, they are added to EPA's [List N: Disinfectants for Use Against SARS-CoV-2 \(COVID-19\)](#), which shows products that are effective against COVID-19. The following list developed as part of the Rhode Island Department of Environmental Management (RIDEM) Green Cleaning Pollution Prevention Program has made it easier for the user to identify active ingredients of concern, safety data sheets, and identify safer active ingredients. Safer Ingredients listed on the following table are identified in green : **SAFE DISINFECTANT INGREDIENTS**.

It is important to understand that disinfectants are **registered antimicrobial pesticides** that largely contain the following active ingredients of concern: **Sodium Hypochlorite (bleach), Quaternary Ammonium compounds (QUATS), and Phenols**. These chemicals of concern are classified as asthmagens and have the potential to cause respiratory irritation and numerous other human health side effects if they are used improperly. When using disinfectants, EPA and the RIDEM recommend using safer alternatives that **DO NOT** contain these chemicals of concern. A list of safer alternatives can be found on the following list as well as on EPA's website: <https://www.epa.gov/saferchoice>.
