**RE: Air Monitoring Report
Third Quarter, 2012
Retail Complex, Active Sub-Slab Depressurization System
Former Gorham Manufacturing Facility
333 Adelaide Avenue, Providence, Rhode Island
AMEC Project No. 3650080114**

Dear Mr. Martella:

This letter report presents the results of quarterly compliance sampling and analysis conducted by AMEC E&I, Inc. at the retail complex located at the Former Gorham Manufacturing Facility, 333 Adelaide Avenue, Providence, Rhode Island (the Site). The reporting period is from July 2012 through September 2012 and includes one quarterly compliance sampling event (September 13, 2012).

The sampling and analysis and this reporting were conducted consistent with the Short Term Response Action Order of Approval dated July 24, 2008 and the Addendum to the Order of Approval dated August 7, 2008 (collectively referred to as the Orders of Approval).

Background

The active sub-slab depressurization (ASD) system, also called a vapor mitigation system, in the large retail space consists of four extraction wells connected to a 3 hp Rotron regenerative blower. The blower is located in an enclosure located at the north, or rear, of the large retail space.

The small retail spaces consist of the eastern, central, and western retail spaces (Figure 1). The mitigation systems in the small retail spaces consist of one extraction well in each space connected to an individual radon-type fan, located at the north, or rear, of each small retail space.

Small Retail Spaces

The quarterly monitoring event for the three small retail spaces, consistent with the requirements of the Orders of Approval, was completed on September 13, 2012.

Table 1 summarizes the analytical results at the small retail spaces for the baseline sampling event conducted prior to system start-up and all subsequent sampling events conducted after system start-up. Results of the indoor air samples were compared to the Draft Connecticut Industrial/Commercial Indoor Target Air Concentrations (TAC), which were identified as action levels in the Orders of Approval. The laboratory report (12I0395) associated with the September 13, 2012 quarterly sampling event is provided in Appendix A of this letter report. The analytical laboratory's detection limits are provided in Appendix B.

The sampling event included an indoor air sample from each of the small retail spaces (locations IA-5, IA-6, and IA-7), one outdoor air reference sample (location AA-1), and one air sample collected from each of the three vapor extraction wells (EW-5, EW-6, and EW-7). The sampling locations are shown in Figure 1. The outdoor reference air sample (AA-1) was located on the Northwest corner of the property, upwind of the small retail space. Sub-slab vacuum monitoring (pressure differential measurements) was also conducted at locations VMW-5, VMW-6, and VMW-7 in conjunction with the quarterly air sampling program. The vacuum monitoring results are tabulated in Table 2.

The following conclusions are based on Site observations and the data from Table 1.

- Indoor air sample results are in compliance with action levels for the September 13, 2012 quarterly sampling event in the three small retail spaces (sample locations IA-5, IA-6, and IA-7).
- The eastern small retail space (sample location IA-5) remained unoccupied until early September when E.T. & L. Corp (Construction subcontractor for Textron, Inc.) began leasing the space as an construction office for the Remedial Action Work Plan (RAWP) Phase I Soil Capping of Parcel C-1 .
- The center small retail space (sample location IA-6) remains unoccupied.
- The western small retail space (sample location IA-7) is intermittently occupied.
- The mitigation systems are functioning as designed.

Large Retail Space

The quarterly monitoring event for the large retail space, consistent with the requirements of the Orders of Approval, was completed on September 13, 2012. Table 3 summarizes the analytical results for the large retail space for the baseline sampling event conducted prior to system start-up and all subsequent sampling events conducted after system start-up. Results of the indoor air samples were compared to the Draft Connecticut Industrial/Commercial Indoor Target Air Concentrations (TAC), which were identified as

action levels in the Orders of Approval. The laboratory report (12I0395) associated with the September 13, 2012 quarterly sampling event is provided in Appendix A of this letter report. The analytical laboratory's detection limits are provided in Appendix B.

The sampling event included collection of samples from each of the indoor air sampling points in the large retail space (locations IA-1 through IA-4), one outdoor air reference sample (location AA-1), and one air sample collected from the manifold where air from the four vapor extraction wells is collected (EW-Combined). The sampling locations are shown in Figure 1. The outdoor reference air sample (AA-1) was located at an upwind location. Sub-slab vacuum monitoring (pressure differential measurements) was also conducted at locations VMW-1 through VMW-4 in conjunction with the air sampling program. The vacuum monitoring results for the large retail space are tabulated in Table 4.

The following conclusions are based on Site observations and the data from Table 3.

- Indoor air sample results were in compliance with action levels for the September 13, 2012 quarterly sampling event in the large retail space (sample locations IA-1 through IA-4).
- The mitigation system is functioning as designed and is achieving desired results with respect to indoor air quality in the large retail space.
- The retail space is in the process of being subdivided for future tenants. Construction of the eastern end of the former Stop & Shop space is scheduled to begin in early November 2012. The eastern end of the retail space will contain indoor air sample locations IA-2 and IA-4 and sub-slab vacuum monitoring VMW-2. The western side of the former large retail space will remain vacant until an occupant has been identified for the space. Indoor air locations IA-1 and IA-3, vapor extraction well (EW-5) and sub-slab vacuum monitoring VMW-1, VMW-3, and VMW-4 will not be impacted by the proposed construction.
- Before construction begins, Textron has requested permission from Stop & Shop to collect indoor air samples prior to the start of construction and again at the completion of the construction for the new commercial space at the eastern end of the former large retail space to ensure that the operation of the ASD system and the indoor air quality has not been impacted by the construction. The sampling event conducted September 13, 2012 will serve as the pre -construction sampling event.

ASD System Monitoring

The ASD system performance is monitored and maintained monthly by Clean Harbors Environmental Services. There was a low flow condition on radon fan 1 on July 1st and July 12th. There was no identified cause for the alarm. A Clean Harbors technician was on-site July 12th to assess the alarm. The fan was operational and the alarm was reset. Clean Harbors will continue to monitor the issue with each monthly system inspection. On July 25th, Clean Harbors replaced the UPS battery which powers the PLC and autodialer

when the main power supply is lost. There was a low flow condition on radon fan 2 on September 13th and September 14th. Clean Harbors reset the alarm on September 14, 2012. An issue with the current relay sensor for radon 2 was likely the cause for the alarm. Clean Harbors will review during next maintenance visit.

Next Reporting Period

The next quarterly report (fourth quarter 2012) will include monitoring from October 2012 through December 2012. The report will be prepared and submitted to the Rhode Island Department of Environmental Management (RIDEM) in January 2013.

Please contact the undersigned at 781-245-6606 if we can provide additional information or answer any questions concerning these monitoring events and system adjustments.

Sincerely,

AMEC Environment & Infrastructure, Inc.

Mark Maggiore
Environmental Scientist

Charles Collet, P.E.

[a] Benzene and carbon tetrachloride are above the target air concentration, but are not compliance violations as indoor air concentrations are consistent with outdoor air concentrations that were sampled on the same day.

NA - not available

U - Not detected, value is the detection limit

B - Compounds detected in method blank as well as field sample

D - Result from diluted analyses

ug/m³ - micrograms per cubic meter

5 Bolded and shaded values are above the CT target indoor air concentration for industrial/commercial scenarios

[a] Tetrachloroethene are above the target air concentration compliance violations as indoor air concentrations were sample with outdoor air concentrations that were sampled

NA - not available

U - Not detected, value is the detection limit

B - Compounds detected in method blank as well

D - Result from diluted analyses

ug/m³ - micrograms per cubic meter

5 Bolded and shaded values are above indoor air concentration for industrial/

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

EPA TO-15

Qualifications:

Analyte is found in the associated blank as well as in the sample.

Analyte & Samples(s) Qualified:

Acetone, Methylene Chloride

12I0395-01[IA-1-091312], 12I0395-02[IA-2-091312], 12I0395-03[IA-3-091312], 12I0395-04[IA-4-091312], 12I0395-05[IA-5-091312], 12I0395-06[IA-6-091312],
12I0395-07[IA-7-091312], 12I0395-08[AA-1-091312], 12I0395-09[EW-5-091312], 12I0395-10[EW-6-091312], 12I0395- 11[EW-7-091312],
12I0395-12[EW-Combined-091312], B059064-BLK1, B059064-BS1

Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the low side.

Analyte & Samples(s) Qualified:

1,1,1,2-Tetrachloroethane, Ethanol

12I0395-01[IA-1-091312], 12I0395-02[IA-2-091312], 12I0395-03[IA-3-091312], 12I0395-04[IA-4-091312], 12I0395-05[IA-5-091312], 12I0395-06[IA-6-091312],
12I0395-07[IA-7-091312], 12I0395-08[AA-1-091312], 12I0395-09[EW-5-091312], 12I0395-10[EW-6-091312], 12I0395- 11[EW-7-091312],
12I0395-12[EW-Combined-091312], B059064-BLK1, B059064-BS1

Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.

Analyte & Samples(s) Qualified:

1,1,1,2-Tetrachloroethane, 2-Hexanone (MBK), 4-Methyl-2-pentanone (MIBK), Styrene

12I0395-01[IA-1-091312], 12I0395-02[IA-2-091312], 12I0395-03[IA-3-091312], 12I0395-04[IA-4-091312], 12I0395-05[IA-5-091312], 12I0395-06[IA-6-091312],
12I0395-07[IA-7-091312], 12I0395-08[AA-1-091312], 12I0395-09[EW-5-091312], 12I0395-10[EW-6-091312], 12I0395- 11[EW-7-091312],
12I0395-12[EW-Combined-091312], B059064-BLK1, B059064-BS1

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Michael A. Erickson
Laboratory Director

FLAG/QUALIFIER SUMMARY

- * QC result is outside of established limits.
 - † Wide recovery limits established for difficult compound.
 - ‡ Wide RPD limits established for difficult compound.
 - # Data exceeded client recommended or regulatory level
- Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
- B Analyte is found in the associated blank as well as in the sample.
 - J Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
 - L-03 Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the low side.
 - V-05 Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.

AIR Only Receipt Checklist

CLIENT NAME: AMEC

RECEIVED BY: JSM

DATE: 9-13-12

1) Was the chain(s) of custody relinquished and signed?

Yes No

2) Does the chain agree with the samples?

If not, explain:

Yes No

3) Are all the samples in good condition?

If not, explain:

Yes No

4) Are there any samples "On Hold"?

Yes No Stored where: _____

5) Are there any RUSH or SHORT HOLDING TIME samples?

Yes No

Who was notified _____ Date _____ Time _____

6) Location where samples are stored:

AIR
LAB

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature: _____

Containers received at Con-Test

| | | # of Containers | Types (Size, Duration) |
|-------------|--|-----------------|------------------------|
| Summa Cans | | 8 13 | 6L |
| Tedlar Bags | | | |
| Tubes | | | |
| Regulators | | 8 13 | 30 min |
| Restrictors | | | |
| Tubing | | | |
| Other | | | |

Unused Summas: 1197 1081
14154 1456 1289 1139
1644 1456 1320 1100
1032 1159 1729

Unused Regulators: 4176 4172
4170 4178 4181 4177 4173
4179 4174 4042
4175 4171

1) Was all media (used & unused checked into the WASP?)

2) Were all returned summa cans, Restrictors, & Regulators documented as returned in the Air Lab Inbound/Outbound Excel Spreadsheet?

Laboratory Comments:

unused Summa- 1509

unused Regulator - 4180
