Re:
Monthly Status Report-March 2004
Former Gorham Manufacturing Facility
333 Adelaide Avenue, Providence, RI
Site Remediation Case No. 97-030

Dear Mr. Martella:

Shaw Environmental, Inc. (Shaw) has prepared this monthly status report on behalf of Textron, Inc. (Textron). This status report is for the remediation of tetrachloroethene (PCE) contaminated groundwater at the former Gorham Manufacturing Facility in Providence, Rhode Island. The Rhode Island Department of Environmental Management (RIDEM) originally approved the groundwater remediation in a Revised Order of Approval dated March 15, 2002. Another revised RAWP was prepared by Shaw dated May 20, 2003 proposing a follow-on injection of sodium permanganate as part of the remediation of PCE contaminated groundwater.

This status report discusses additional site investigation activities associated with the follow-on injections and the installation of groundwater compliance monitoring wells and sampling of the compliance wells as proposed in the RAWP dated April 2001.

INTRODUCTION

The Former Gorham Manufacturing facility is located at 333 Adelaide Avenue, Providence, Rhode Island (the Site). The contaminant of concern for groundwater is primarily PCE. As discussed in the Remedial Action Work Plan and subsequent revisions, the PCE source area in the vicinity of the former building W is the area of concern being treated, using an in-situ application of sodium permanganate, to achieve the site-specific remedial goal of 7,700 micrograms per liter (ug/L).

A Shaw Group Company
**CHRONOLOGY OF FIELD ACTIVITIES**

The following field activities were conducted in March 2004:

- Shaw completed the installation of perimeter compliance monitoring wells (which had not been previously installed) and conducted an initial round of groundwater sampling associated with the compliance wells. These activities were conducted from March 10, 2004 to April 1, 2004.
- Shaw conducted investigation activities associated with the follow-on treatment. Shaw conducted well installation, soil sampling, and groundwater sampling from March 19, 2004 to April 1, 2004.

**COMPLIANCE WELL INSTALLATIONS**

The compliance monitoring plan describes monitoring at six well locations (existing monitoring wells MW-112, GZA-5, and GZA-6 will be used as three of the compliance wells). Shaw installed the remaining three compliance monitoring wells at the locations indicated on Figure 1 (i.e., CW-1, CW-2, and CW-6). The tables below describe the well locations, screen intervals, and analytical methods to be used during sampling of the compliance wells.

GZA-5 (CW-5) | Up-gradient of Mashpaug Cove | 30 to 40 ft. bgs | VOCs by EPA Method 8260B
GZA-6 (CW-4) | Up-gradient of Mashpaug Cove | 5 to 15 ft. bgs | VOCs by EPA Method 8260B

MONITORING WELL INSTALLATIONS/SOIL BORINGS

A shallow and deep well pair was installed east of the treatment area, identified as MW-2088&8D (Figure 2). These wells were installed to comply with RIDEM’s request for additional monitoring wells east of the treatment area.

Shaw installed a deep well between MW-205 and MW-112 (identified as MW-209D) to help define the horizontal and vertical extent of the southwestern edge of the treatment area. Samples were also collected for soil oxidant demand (SOD) and total organic carbon (TOC) testing.

Two soil borings (SB-1 and SB-2) were advanced in the center of the treatment area to collect samples for VOC analysis to investigate the possible presence of DNAPL (both in the vadose zone and in saturated soils). Samples were also collected for soil oxidant demand (SOD) and total organic carbon (TOC) testing. One of these locations was completed as a future injection well point (SB-1).

SUMMARY OF ANALYTICAL DATA

Soil Sampling- 3/11/04 to 3/15/04

Soil samples (8) were collected and analyzed for VOCs by EPA Method 8260. Soil samples (6) were collected and analyzed for soil oxidant demand (SOD), fraction of organic carbon (Foc), and total organic carbon (TOC).

Groundwater Sampling- 3/30/04 to 4/01/04

Groundwater samples (25) were collected and analyzed for the following:
- VOCs by EPA Method 8260 - 24 samples including a duplicate
- Chloride by EPA Method 300.0 Part A - 24 samples including a duplicate
- Chemical Oxygen Demand (COD) by EPA Method 410.2 - 24 samples including a duplicate
- Total petroleum hydrocarbons (TPH) by EPA Method 8100M- 1 sample

Shaw is currently evaluating the analytical data. A summary of the analytical results and a copy of the laboratory reports will be provided in the next monthly status report.

FUTURE ACTIVITIES

Shaw will complete its evaluation of the recent field and analytical data. Shaw will review the currently proposed follow-on application based on the newly collected data and may make revisions to the RAPW based on these results.

If you have any questions, please contact Ed Van Doren at (978) 691-2130.

Sincerely,

SHAW ENVIRONMENTAL, INC.

Edward P. Van Doren, PE
Project Manager
