

engineering and constructing a better tomorrow

May 28, 2008

Mr. Joseph T. Martella II, Senior Engineer
RIDEW Office of Waste Management
Site Remediation Program
235 Providence Street
Providence, RI 02908

RE: Retail Complex Soil Investigation
Former Gorham Manufacturing Facility
333 Adelaide Avenue, Providence, Rhode Island
MACTEC Project No. 3650050041.20

Dear Mr. Martella:

This letter summarizes the soil investigation activities completed by MACTEC Engineering and Consulting, Inc. (MACTEC) between May 8 – 9, 2008, beneath the retail complex at the former Gorham Manufacturing Facility (the Site). The objective of this investigation was to characterize vadose zone soil beneath the building at several locations in support of the design and implementation of a soil vapor mitigation system. Textron will continue to investigate the Site to refine the site conceptual model and to identify and conduct cleanup activities at the Site.

BACKGROUND

Soil vapor and groundwater investigations in November 2007 and March 2008, respectively, at the retail complex, identified the presence of volatile organic compounds (VOCs) in the southwest corner of the former supermarket space. Reports from these investigations are located at the Rhode Island Department of Environmental Management (RIDEW) website: <http://www.dem.ri.gov/programs/benviron/waste/gorham.htm>. An additional investigation was completed in May 2008 to determine if soils beneath the building and above the water table are impacted by VOCs.

SITE PREPARATION ACTIVITIES

A soil investigation work plan was submitted to RIDEW dated May 7, 2008, and was posted on RIDEW's project website. MACTEC also distributed written notification of the proposed work to the abutters, stakeholders and building owner/occupants in accordance with the Remediation

Regulations prior to conducting the work. The notification was issued in both English and Spanish. In addition, Textron and MACTEC coordinated with the retail complex owner and occupants to minimize disturbance of business activities.

SCOPE OF WORK

MACTEC and its subcontractor, Geologic, Inc. of Norfolk, Massachusetts, advanced seven soil borings (SB-6 through SB-12) inside the former supermarket, and one soil boring (SB-13) was advanced inside the former Dollar Store (west of the former supermarket) with a Geoprobe® 6620 push probe. The soil borings were co-located with the previous soil gas sample locations, and the locations were reviewed with RIDEM prior to conducting the investigation. Please refer to the attached Figure 1 for the soil boring locations.

Soil borings were extended to 28 ft below ground surface (bgs), which is approximately 2 ft into the groundwater table. Soil was collected in 4 ft long soil cores. Soil from at least two depths within each 4 foot-long soil core was placed in Ziploc bag, and the headspace was screened with a photo-ionization detector (PID). One vadose zone soil sample was collected for laboratory analysis from each soil boring at the depth with the highest PID reading. For the eight borings, soil samples for laboratory analysis were collected from between 5 ft and 17 ft bgs. Soil samples were collected using plastic plungers and were immediately placed in VOA vials with methanol, consistent with current standards of practice. This sample collection procedure minimizes loss of VOCs from the samples prior to their analyses (USEPA Method 8260B).

Soil boring logs with associated PID headspace readings are included in Appendix A. Soil samples were delivered under chain of custody to ESS Laboratory of Cranston, Rhode Island for VOC analysis.

RESULTS

Only five of the fifty-four compounds analyzed by the laboratory were detected in at least one soil sample. These five compounds included trichloroethene (TCE), 1,1,1-trichloroethane (1,1,1-TCA), cis-1,2-dichloroethene, methylene chloride, and toluene. All but three of these detected concentrations (TCE) were detected below the method reporting limit, and most were near the method detection limit. Table 1 presents a summary of analytical results for those compounds detected. The laboratory report for the soil samples is included as Appendix B.

TCE and 1,1,1-TCA were detected most frequently (seven of eight samples) and the other compounds were detected in only one or two of the samples. Table 1 presents the comparison of detected concentrations to the Remediation Regulations soil direct exposure criteria and soil leachability criteria. The comparison shows:

- Concentrations of all detected compounds in soil samples are well below the industrial/commercial direct exposure criteria, which are applicable for this parcel;
- Concentrations of all detected compounds in soil samples are well below the leachability criteria for areas with category GB groundwater (applicable for this parcel); and
- Concentrations of all detected compounds in soil samples are well below the residential direct exposure criteria. Although these residential criteria are not applicable to soil at this parcel, this comparison indicates that the detected soil levels are very low and do not pose any health concern.

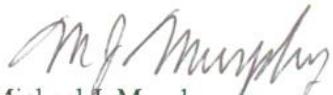

No visual or olfactory evidence of petroleum contamination was observed in the soil borings. Therefore, consistent with the work plan, the soil samples were not analyzed for total petroleum hydrocarbons (TPH). Toluene is the only petroleum-related VOC that was detected. The two detected concentrations were well below applicable criteria.

CONCLUSIONS

Based on the results of the soil investigation beneath the retail complex, vadose zone soil is not a substantial source of VOCs in soil vapor. Also, there is no indication that soil in the vadose zone is significantly contaminated with VOCs, since all detected concentrations were well below industrial/commercial and residential direct exposure criteria and leachability criteria. This investigation confirms that VOCs in groundwater are the primary source of VOCs in soil vapor beneath the retail complex.

Feel free to contact either Dave Heislein at (781) 213-5655 or Greg Simpson of Textron at (401) 457-2635 with any questions. We are available either for a conference call or to meet with RIDEM to address any questions you may have on this report.

Sincerely,
MACTEC Engineering and Consulting, Inc.

Michael J. Murphy
Senior Principal Scientist

David E. Heislein

APPENDIX B

ESS Laboratory Report for Soil Samples

ESS Laboratory

Division of Thielsch Engineering, Inc.

CERTIFICATE OF ANALYSIS

PROJECT NARRATIVE

David Heislein
MACTEC Engineering & Consulting, Inc.
107 Audubon Road
Wakefield, MA 01880

RE: Providence Gorham Site
ESS Laboratory Work Order Number: 0805113

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this Project Narrative, the entire report has been paginated. The ESS Laboratory Certifications sheet is the final report page. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been mailed. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

Date: May 14, 2008

Analytical Summary

The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration may be used instead of automated integration because it produces more accurate results. All ICP Metals were analyzed using the established linear dynamic range to determine acceptable analytical results.

ESS Laboratory certifies that the test results meet the requirements of NELAC, except where noted within this project narrative.

Sample Receipt

The following sample(s) were received on May 08, 2008 for the analyses specified on the enclosed Chain of Custody Record.

Laboratory ID	Matrix	Client SampleID
0805113-01	Soil	SB609
0805113-02	Soil	SB713
0805113-03	Soil	SB805
0805113-04	Soil	SB917

Notes and Definitions

U	Analyte included in the analysis, but not detected
J	Reported between MDL and MRL; Estimated value.
D+	Relative percent difference for duplicate is outside of criteria.
D	Diluted.
B+	Blank Spike recovery is above upper control limit.
ND	Analyte NOT DETECTED above the detection limit
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.

RE: Providence Gorham Site
ESS Laboratory Work Order Number: 0805113

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this Project Narrative, the entire report has been paginated. The ESS Laboratory Certifications sheet is the final report page. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been mailed. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

Date: May 14, 2008

Analytical Summary

The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration may be used instead of automated integration because it produces more accurate results. All ICP Metals were analyzed using the established linear dynamic range to determine acceptable analytical results.

ESS Laboratory certifies that the test results meet the requirements of NELAC, except where noted within this project narrative.

Sample Receipt

The following sample(s) were received on May 08, 2008 for the analyses specified on the enclosed Chain of Custody Record.

Laboratory ID	Matrix	Client SampleID
0805113-01	Soil	SB609
0805113-02	Soil	SB713
0805113-03	Soil	SB805

CERTIFICATE OF ANALYSIS

PROJECT NARRATIVE

David Heislein
MACTEC Engineering & Consulting, Inc.
107 Audubon Road
Wakefield, MA 01880

RE: Providence Gorham Site
ESS Laboratory Work Order Number: 0805137

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this Project Narrative, the entire report has been paginated. The ESS Laboratory Certifications sheet is the final report page. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been mailed. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

Date: May 15, 2008

Analytical Summary

The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration may be used instead of automated integration because it produces more accurate results. All ICP Metals were analyzed using the established linear dynamic range to determine acceptable analytical results.

ESS Laboratory certifies that the test results meet the requirements of NELAC, except where noted within this project narrative.

Sample Receipt

The following sample(s) were received on May 09, 2008 for the analyses specified on the enclosed Chain of Custody Record.

Laboratory ID	Matrix	Client SampleID

Notes and Definitions

U	Analyte included in the analysis, but not detected
J	Reported between MDL and MRL; Estimated value.
D+	Relative percent difference for duplicate is outside of criteria.
D	Diluted.
B+	Blank Spike recovery is above upper control limit.
ND	Analyte NOT DETECTED above the detection limit
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.

PROJECT NARRATIVE

David Heislein
MACTEC Engineering & Consulting, Inc.
107 Audubon Road
Wakefield, MA 01880

RE: Providence Gorham Site
ESS Laboratory Work Order Number: 0805137

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this Project Narrative, the entire report has been paginated. The ESS Laboratory Certifications sheet is the final report page. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been mailed. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

Date: May 15, 2008

Analytical Summary

The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration may be used instead of automated integration because it produces more accurate results. All ICP Metals were analyzed using the established linear dynamic range to determine acceptable analytical results.

ESS Laboratory certifies that the test results meet the requirements of NELAC, except where noted within this project narrative.

Sample Receipt

The following sample(s) were received on May 09, 2008 for the analyses specified on the enclosed Chain of Custody Record.

Laboratory ID	Matrix	Client SampleID
0805137-01	Soil	SB1010
0805137-02	Soil	SB1107
0805137-03	Soil	SB1209
0805137-04	Soil	SB1314

ESS Laboratory

Division of Thielsch Engineering, Inc.

CERTIFICATE OF ANALYSIS

Client Name: MACTEC Engineering & Consulting, Inc.

Client Project ID: Providence Gorham Site

ESS Laboratory Work Order: 0805137

PROJECT NARRATIVE

5035/8260B Volatile Organic Compounds / Methanol

BE81302-BSD1 Blank Spike recovery is above upper control limit.

Acetone

BE81302-BSD1 Relative percent difference for duplicate is outside of criteria.

Acetone, Tetrachloroethene

No other observations noted.

End of Project Narrative.

Sample and Cooler Receipt Checklist

Client: Mactec
 Client Project ID: _____
 Shipped/Delivered Via: Client

ESS Project ID: 08050137
 Date Project Due: 5/16/08
 Days For Project: 5 Day

Items to be checked upon receipt:

- | | | | |
|--|-------------------------------|---|---|
| 1. Air Bill Manifest Present? | * <input type="checkbox"/> No | 10. Are the samples properly preserved? | <input type="checkbox"/> Yes |
| Air No.: | | 11. Proper sample containers used? | <input type="checkbox"/> Yes |
| 2. Were Custody Seals Present? | <input type="checkbox"/> No | 12. Any air bubbles in the VOA vials? | <input type="checkbox"/> N/A |
| 3. Were Custody Seals Intact? | <input type="checkbox"/> N/A | 13. Holding times exceeded? | <input type="checkbox"/> No |
| 4. Is Radiation count < 100 CPM? | <input type="checkbox"/> Yes | 14. Sufficient sample volumes? | <input type="checkbox"/> Yes |
| 5. Is a cooler present? | <input type="checkbox"/> Yes | 15. Any Subcontracting needed? | <input type="checkbox"/> No |
| Cooler Temp: <u>3.7</u> | | 16. Are ESS labels on correct containers? | <input type="checkbox"/> Yes <input type="checkbox"/> No |
| Iced With: <u>Icepacks</u> | | 17. Were samples received intact? | <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No |
| 6. Was COC included with samples? | <input type="checkbox"/> Yes | ESS Sample IDs: _____ | |
| 7. Was COC signed and dated by client? | <input type="checkbox"/> Yes | Sub Lab: _____ | |
| 8. Does the COC match the sample | <input type="checkbox"/> Yes | Analysis: _____ | |
| 9. Is COC complete and correct? | <input type="checkbox"/> Yes | TAT: _____ | |

18. Was there need to call project manager to discuss status? If yes, please explain.

Who was called?: _____ By whom? _____

Sample Number	Properly Preserved	Container Type	# of Containers	Preservative
1	Yes	2 oz Soil Jar	1	NP
1	Yes	40 ml - VOA	1	MeOH
2	Yes	2 oz Soil Jar	1	NP
2	Yes	40 ml - VOA	1	MeOH
3	Yes	2 oz Soil Jar	1	NP
3	Yes	40 ml - VOA	1	MeOH
4	Yes	2 oz Soil Jar	1	NP
4	Yes	40 ml - VOA	1	MeOH
