AMEC Project No. 3652150040.03**

Dear Mr. Martella:

This letter summarizes the July 6, 2016 collection of groundwater samples from locations on Parcel C/C-1 as part of the Former Gorham Manufacturing Site in Providence, Rhode Island (Figure 1). This activity was performed to supplement groundwater testing done in July and December 2015, and February and April 2016. This groundwater sampling was conducted in accordance with the Remedial Action Work Plan (RAWP) dated March 11, 2015 and the corresponding Rhode Island Department of Environmental Management (RIDEM) July 9, 2015 Order of Approval (Order of Approval).

Background

Extensive groundwater investigations were previously conducted throughout the upland portions of the Former Gorham Manufacturing Site property, including Parcel C, and within the Mashapaug Inner and Outer Coves (MACTEC, 2006a). The groundwater investigations identified low levels of VOCs in groundwater immediately upgradient of and along the southern shore of the Inner Cove (Parcels C and C-1).

Based on 2006-2010 groundwater data an historic low-level tetrachloroethylene and trichloroethylene (PCE/TCE) plume (a/k/a western plume) was identified that originates from the fill material in the northwestern corner of Parcel C. Groundwater and Inner Cove sediment data collected during the same period (2006-2010) demonstrated that a clear trend of decreasing contaminant concentrations within the groundwater had occurred over time (AMEC 2014, 2015).

RIDEM's Order of Approval requires Textron to monitor Parcel C/C-1 groundwater following completion of the remedial action, by sampling six wells (MW-235S, MW-236S, MW-237S, MW-D, MW-241, and MW-FS) until data from three consecutive sampling rounds demonstrate that Parcel C groundwater is compliant with RIDEM's GB Groundwater Objectives with no increasing concentrations of VOCs, and that Parcel C-1 groundwater is compliant with the Massachusetts Department of Environmental Protection (MassDEP) GW-3 Standards with no increasing concentrations of VOCs. The April 2016 sampling event confirmed that both MW-FS and MW-

237S met the required criteria of three consecutive decreasing rounds of groundwater data and data below the MassDEP GW-3 Standards. These two wells were eliminated from the groundwater monitoring program, as stated in our April 2016 groundwater monitoring report dated May 24, 2016 and our June 8, 2016 call to RIDEM. This fifth round of groundwater sampling included MW-235S, MW-236S, MW-D and MW-241.

Work Activities Conducted

Amec Foster Wheeler Environment and Infrastructure, Inc., (Amec Foster Wheeler) gauged the depth to water in the 4 monitoring wells on July 6, 2016 and in 13 monitoring wells located along the southern shoreline of the Inner Cove on July 14, 2016. These well locations and the groundwater contours for July 14, 2016 are shown on Figure 2 and include MW-235S, MW-236S, MW-237S, MW-238S/D, MW-231S/D, MW-244, MW-D, MW-241, MW-FS, GZA-3 and MW-109D.

Amec Foster Wheeler then sampled the four groundwater monitoring wells - MW-235S, MW-236S, MW-D and MW-241 (Figure 2) using the U.S. Environmental Protection Agency (USEPA) low-flow methodology. Samples from this July 6, 2016 round were submitted under chain-of-custody control to an off-site laboratory for VOC analysis by USEPA Method 8260B. Field data records for the groundwater sampling event are included in Appendix A.

Groundwater Sampling Results

Table 1 summarizes the historic VOC concentrations detected in the four groundwater monitoring wells including the July 2016 groundwater sampling event. VOC concentrations detected in deep wells in Parcel C (MW-D, MW-241) are measured against the RIDEM GB standards, and VOC concentrations detected in shallow wells in Parcel C-1 (MW-235S and MW-236S) are measured against MassDEP GW-3 Standards in accordance with the Order of Approval. The analytical laboratory report for the July 2016 groundwater sampling event is included in Appendix B.

As shown in Table 1, one of the two groundwater samples analyzed for VOC concentrations collected from the monitoring wells located in Parcel C exceeded the GB criteria. The concentration of TCE within MW-D increased so that it is above GB criteria. MW-241 does not exceed the GB criteria. None of the wells in Parcel C-1 exceeded the MassDEP GW-3 criteria.

VOC concentrations in MW-D had decreased three consecutive rounds from December 2015 to April 2016. The July 2016 TCE concentration increased from 0.514D mg/L to 1.36D /0.1.68 D mg/L (GB Criteria 0.54 mg/L).

VOC concentrations in MW-241 have consistently been flat or non-detect since July 2015 (five consecutive rounds). TCE has continued to be below the GB criteria since 2010.

MW-235S and MW-236S VOC concentrations have consistently been below the GW-3 criteria since 2009 and VOC concentrations have been flat and/or decreased in the last five rounds of groundwater sampling.

Groundwater Monitoring Approach

Based on the extensive groundwater data collected historically and confirmation from the recent July 2016 groundwater sampling round, VOC concentrations within the western plume have been reduced. Only MW-D exceeds the required criteria in the Order of Approval. This well contains

concentrations of TCE; no other VOCs exceed the groundwater criteria stated in the Order of Approval. As shown in Table 1, continued biodegradation of VOCs via natural attenuation is occurring in the groundwater. Planned reuse of the Parcel C/C-1 area by the City of Providence School Department is a soccer field. No buildings are planned in the area of the monitoring wells (located within the woods, detention basin and at the Inner Cove shoreline). The Draft Environmental Land Use Restrictions (ELUR) within the February 2016 Remedial Action Completion Report include the provision restricting the use of the groundwater for potable and non-potable use and that no subsurface structures can be constructed over the groundwater without prior approval from RIDEM. This ELUR will be signed and filed by the City of Providence within the Providence Land Use Records, pending RIDEM approval of the ELUR.

Textron will continue to monitor the groundwater quality at MW-D on a quarterly basis through December 2016. Textron will conduct the next groundwater sampling of MW-D in September 2016 and again in December 2016 to further assess the TCE concentrations. We will continue to monitor the groundwater through December 2016 pending compliance of the Parcel C groundwater with RIDEM's GB Groundwater Objectives and no increasing trends of VOCs. A report will be prepared and submitted to the RIDEM in October and December 2016 to update the status of this one monitoring well.

VOC concentrations in monitoring wells MW-235S, MW-236S and MW-241 all meet the RIDEM groundwater criteria specified in the 2015 Order of Approval. VOC concentrations in these three wells have been flat and/or decreased since July 2015.

Please contact the Greg Simpson (401-457-2635) or David Heislein (978-392-5327) if we can provide additional information or answer any questions concerning these groundwater monitoring data and planned sampling of MW-D in September and December 2016.

Sincerely,

Amec Foster Wheeler Environment & Infrastructure, Inc.

RE: Textron Gorham - Groundwater (3652150040)

ESS Laboratory Work Order Number: 1607061

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. REVIEWED

By ESS Laboratory at 5:11 pm, Jul 28, 2016

Analytical Summary

The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with NELAC Standards, A2LA and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.
