This form must be completed or updated each time a Class C operator is trained, terminated, or leaves employment. Class C operators must be trained by the current Class A operator for the facility, and all Class C operators must receive "refresher" training annually or anytime there are significant changes or modifications to the UST system.

Any individual who works with or around a UST system is required to be trained as a Class C operator. This includes all clerks and other employees of gas stations. Class C operators must have basic knowledge of responding to UST-related alarms, spills, or other emergencies and on the location of environmental records. For more information, see Section 1.10(U)(7) of the UST Regulations

This form must be kept up to date and maintained on-site at all times and be available for inspection by R. I. DEM, U.S. EPA, or emergency responders upon request
