On behalf of National Grid, the following summarizes response actions to be performed at the above-referenced site during the timeframe from February 25 to March 1, 2013.

SITE ACTIVITIES TO BE PERFORMED

- Complete site observation walk.
- Continue minor earthwork associated with the proposed electrical substation upgrades.

The majority of the earthwork associated with the substation upgrades was completed in January 2013. Minor excavation (associated with fence installation around the substation and electrical conduit) is planned for late February/early March 2013. The color-coded alert system indicating when excavation is active (yellow sheet) and not active (blue sheet) will be updated on the bulletin boards prior to the start of the minor excavation work.

GZA will continue to oversee soil management and conduct air monitoring during these earth disturbing activities. Air monitoring will be performed consistent with the summary memorandum which was submitted to RIDEM on September 28, 2012. The remainder of the work associated with the electrical substation upgrade project will consist of aboveground work within the substation and buildings. It is currently anticipated that the aboveground work associated with the substation upgrades will continue until the end of July 2013.

Earthwork associated with the electrical substation project was not performed during the past week; therefore no air monitoring data will be posted.

Please contact me at 401-421-4140 Ext. 2719 if you have any questions or comments.
