SITE ACTIVITIES TO BE PERFORMED

- Complete site observation walk.
- Perform paving activities around the natural gas regulator station.

Excavation associated with the substation upgrades is complete. No transient or sustained threshold values were noted for either total volatile organic compounds (TVOCs) or dust during the air monitoring this past week. The air monitoring data will be posted on the National Grid website and the site bulletin boards by Monday.

The remainder of the work associated with the electrical substation upgrade project will consist of aboveground work within the substation and buildings. It is currently anticipated that the aboveground work associated with the substation upgrades will continue until the end of 2013.

Please contact me at 401-421-4140 Ext. 2719 if you have any questions or comments.
